

Contents

1 Environmental history	1
1.1 Why 'Tropical East Asia'?	1
1.2 Ecological vs historical explanations	1
1.3 Plate tectonics and the origin of Tropical East Asia	2
1.4 Sea-level changes	4
1.5 Changes in climate and vegetation	7
1.6 Extraterrestrial impacts, volcanoes, and other natural catastrophes	10
1.7 The first humans	14
1.8 The arrival of modern humans	15
1.9 The spread of agriculture	17
1.10 Hunting	18
1.11 Burning	19
1.12 Urbanization	20
1.13 The Anthropocene	21
2 Physical geography	22
2.1 Introduction	22
2.2 Weather and climate	22
2.2.1 Temperatures	22
2.2.2 Slope angle and aspect	24
2.2.3 Rainfall	24
2.2.4 Water from fog	26
2.2.5 Interannual variation in rainfall	27
2.2.6 Hail, snow, and ice	28
2.2.7 Wind	29
2.2.8 Lightning	31
2.3 Fires	31
2.4 Soils	33
2.4.1 Soil classifications	33
2.4.2 Landslides and soil erosion	35
2.5 Vegetation	36
2.5.1 Lowland vegetation	36
2.5.2 Montane vegetation	46
2.5.3 Wetlands	47
2.5.4 Urban vegetation	51
2.6 Plant phenology	52

2.6.1	Leaf phenology	53
2.6.2	Reproductive phenology	55
3	Biogeography	62
3.1	Introduction	62
3.2	Origins of the biogeographical regions	64
3.3	Biogeographical transitions	65
3.3.1	Tropical East Asia and the Australian Region	65
3.3.2	Tropical East Asia and the Palaearctic Region	66
3.3.3	Tropical East Asia and India	68
3.4	How many species are there in Tropical East Asia?	68
3.5	Patterns of diversity within Tropical East Asia	69
3.6	Subdividing Tropical East Asia	74
3.7	Island biogeography	75
3.7.1	Continental islands on the Sunda Shelf	76
3.7.2	Hainan and Taiwan	77
3.7.3	Ryukyu (Nansei) Islands	77
3.7.4	Ogasawara (Bonin) Islands	78
3.7.5	Krakatau	78
3.7.6	Andaman and Nicobar Islands	79
3.7.7	Islands off the west coast of Sumatra	79
3.7.8	The Philippines	80
3.7.9	Sulawesi	82
3.7.10	Sangihe and Talaud Islands	83
3.7.11	Nusa Tenggara	84
3.7.12	Maluku	85
4	The ecology of plants: from seed to seed	86
4.1	Introduction	86
4.2	Study sites	86
4.3	Trees from seed to seed	88
4.3.1	Pollination	88
4.3.2	Seed dispersal	96
4.3.3	Gene flow by pollen and seeds	105
4.3.4	Seed predation and seed pathogens	105
4.3.5	Germination and seedling establishment	108
4.3.6	The seedling stage	110
4.3.7	Sapling to adult	111
4.3.8	Tree guilds	112
4.3.9	Sprouts and resprouting	113
4.4	Other life forms	114
4.4.1	Lianas	114
4.4.2	Ground herbs	115
4.4.3	Epiphytes	115
4.4.4	Hemi-epiphytes and stranglers	117
4.5	The maintenance of species diversity in tropical forests	117
4.6	Functional traits, phylogeny, and community assembly	120

4.7	Forest succession	121
4.8	Prediction in plant ecology	122
5	The ecology of animals: foods and feeding	123
5.1	Introduction	123
5.2	Herbivores	123
5.2.1	Leaf eaters	124
5.2.2	Shoot feeders, bark feeders, and wood feeders	130
5.2.3	Root feeders	130
5.2.4	Sap suckers	130
5.2.5	Ants as 'cryptic herbivores'	131
5.2.6	Gall formers	132
5.2.7	Flower visitors	132
5.2.8	Frugivores	134
5.2.9	Granivores	138
5.3	Detritivores	138
5.4	Carnivores	139
5.4.1	Invertebrate feeders	139
5.4.2	Vertebrate feeders	143
5.5	Parasites and parasitoids	147
5.6	Omnivores	148
5.7	Scavengers	149
5.8	Coprophages	150
6	Energy and nutrients	151
6.1	Introduction	151
6.2	Energy and carbon	151
6.2.1	Primary production	151
6.2.2	Biomass	154
6.2.3	Net ecosystem production and exchange	156
6.3	Soil nutrients	157
6.3.1	Nitrogen	158
6.3.2	Phosphorus	160
6.3.3	Essential cations	162
6.3.4	Micronutrients	162
6.3.5	Aluminium, manganese, and hydrogen	163
6.4	Animal nutrition	163
6.5	Research needs	164
7	Threats to biodiversity	165
7.1	Introduction	165
7.2	Don't trust the numbers!	165
7.3	The ultimate causes	166
7.3.1	The growth of human populations	166
7.3.2	Poverty	167
7.3.3	Corruption and poor governance	167

7.3.4	Globalization	169
7.4	The major threats to biodiversity	169
7.4.1	Habitat loss	169
7.4.2	Deforestation	169
7.4.3	Fragmentation	172
7.4.4	Mining	174
7.4.5	Urbanization	174
7.4.6	Logging	175
7.4.7	Collecting of non-timber forest products	176
7.4.8	Hunting	178
7.4.9	Fires	180
7.4.10	Invasive species, native winners, and biotic homogenization	182
7.4.11	Diseases of wildlife, people, and plants	185
7.4.12	Air pollution and nutrient enrichment	186
7.4.13	Climate change	187
7.5	Predicting extinctions	192
8	Conservation: saving all the pieces	195
8.1	Introduction	195
8.2	Who should pay and how?	195
8.2.1	Who should pay?	195
8.2.2	Non-market funding	196
8.2.3	Market-oriented funding	198
8.3	What should be protected?	206
8.3.1	Surrogates in conservation planning	206
8.3.2	Setting priorities	207
8.4	Protecting areas	213
8.4.1	Establishing new protected areas	213
8.4.2	Enhancing protection for existing protected areas	214
8.4.3	Community-based conservation	214
8.4.4	Integrated conservation and development projects (ICDPs)	216
8.5	Sustainable exploitation	216
8.5.1	Logging and the collection of non-timber forest products	216
8.5.2	Hunting	218
8.5.3	Controlling trade	218
8.6	Managing the matrix	219
8.7	Managing other threats	220
8.7.1	Controlling fires	220
8.7.2	Managing invasive species	221
8.7.3	Minimizing climate change impacts	222
8.7.4	Biofuels	223
8.7.5	Air pollution	224
8.8	<i>Ex situ</i> conservation	224
8.9	Ecological restoration and reintroduction	226
8.9.1	Restoring forests	226
8.9.2	Reintroducing species	230
8.10	Conservation leakage	232
