Foreword	xi
<i>Tim Clutton-Brock</i>	
Preface	xiv
List of Contributors	xviii
1 What is parental care?	1
<i>Per T. Smiseth, Mathias Kölliker, and Nick J. Royle</i>	
1.1 Introduction	1
1.2 Forms of parental care	2
1.2.1 Provisioning of gametes	2
1.2.2 Oviposition-site selection	3
1.2.3 Nest building and burrowing	3
1.2.4 Egg attendance	3
1.2.5 Egg brooding	4
1.2.6 Viviparity	5
1.2.7 Offspring attendance	5
1.2.8 Offspring brooding	5
1.2.9 Food provisioning	6
1.2.10 Care after nutritional independence	6
1.2.11 Care of mature offspring	7
1.3 Definition of terms	7
1.4 Assigning fitness to parents and offspring	10
1.4.1 Assigning offspring survival to offspring and parental fitness	10
1.4.2 Assigning costs and benefits of care to offspring and parents	11
1.5 Origin and evolution of parental care	12
1.6 Conclusion	14
Section I Origin and Evolution of Parental Care	
2 Theoretical foundations of parental care	21
<i>Hope Klug, Suzanne H. Alonzo, and Michael B. Bonsall</i>	
2.1 Introduction	21
2.1.1 Defining parental care	21
2.1.2 The role of modelling in parental care theory	22
2.1.3 General theoretical questions	22
2.2 When should care be provided?	22
2.2.1 Costs and benefits of parental care	22
2.2.2 Life-history, ecology, and the origin of care	24

2.3 Which sex should provide care?	26
2.4 How much care should be provided?	29
2.4.1 Offspring reproductive value	29
2.4.2 How much care the other parent provides	30
2.4.3 Parental residual reproductive value	31
2.5 Why do we see a specific form of care behaviour in a given population or species?	33
2.5.1 What type of care to provide?	33
2.5.2 Explaining complex patterns of care in a given system: three examples	33
2.6 Future directions and challenges	34
2.6.1 Linking theory and data	34
2.6.2 Origin versus maintenance of care	35
2.6.3 Ecological and evolutionary feedback	36
3 Benefits and costs of parental care	40
<i>Carlos Alonso-Alvarez and Alberto Velando</i>	
3.1 Introduction	40
3.2 Trade-offs and the nature of the parental resources	40
3.2.1 Limiting resources	40
3.2.2 Non-linear relationships between resource allocation and fitness	42
3.2.3 Limitations of the resource allocation trade-off perspective	42
3.2.4 Cost-free resources and resources not involved in care	43
3.3 Benefits of parental care: mechanistic basis	44
3.3.1 Short-term benefits of parental care	44
3.3.2 Long-term benefits of parental care	44
3.3.3 Parental care and offspring phenotypic adjustment	45
3.4 The costs of parental care	46
3.4.1 Non-physiological costs	47
3.4.2 Physiological costs	48
3.5 Costs and benefits in the balance	52
3.5.1 Molecular signals promoting parental effort	53
3.5.2 Pathways inhibiting parental effort	53
3.6 Final remarks	54
4 Patterns of parental care in vertebrates	62
<i>Sigal Balshine</i>	
4.1 Introduction	62
4.2 Forms of care	63
4.2.1 Preparation of the physical rearing environment	63
4.2.2 Defence of offspring	65
4.2.3 Provisioning	66
4.3 Transitions in care	69
4.3.1 Parental care in fishes	69
4.3.2 Parental care in amphibians	69
4.3.3 Parental care in reptiles	71
4.3.4 Parental care in birds	71
4.3.5 Parental care in mammals	72

4.4 Parental care in humans	72
4.4.1 Exceptionally long parental care duration	73
4.4.2 Male care and support	73
4.4.3 Support from constellations of kin	74
4.4.4 Humans as a study system for parental care	74
4.5 Concluding remarks	75
5 Patterns of parental care in invertebrates	81
<i>Stephen T. Trumbo</i>	
5.1 Introduction	81
5.2 Forms of care	82
5.2.1 Trophic eggs	82
5.2.2 Attending eggs and offspring	82
5.2.3 Protection and facilitating feeding of mobile young	83
5.2.4 Brooding behaviour and viviparity	83
5.2.5 Nest building and burrowing	84
5.2.6 Food provisioning	84
5.3 Origins and transitions of parental care	85
5.3.1 Factors promoting care	85
5.3.2 Male versus female care	87
5.3.3 Biparental care	89
5.3.4 The loss of parental care	92
5.4 Microbiology of care	93
6 Sex differences in parental care	101
<i>Hanna Kokko and Michael D. Jennions</i>	
6.1 Introduction	101
6.2 Why does an individual's sex predict its behaviour?	102
6.3 The first sex difference in parental care: anisogamy	103
6.4 What happened next? Sex roles in post-zygotic parental care	105
6.5 Uncertain parentage reduces male care	106
6.5.1 Why exactly does paternity matter?	107
6.5.2 Behavioural and evolutionary time scales are not equivalent	107
6.5.3 Traits that protect paternity can co-evolve with care	108
6.6 Don't bother caring till the going gets tough: the OSR	108
6.7 Orwell was right, not all animals are equal: sexual selection and the adult sex ratio	111
6.8 Conclusions	112
Section II Conflict and Cooperation in Parental Care	
7 Parent-offspring conflict	119
<i>Rebecca M. Kilner and Camilla A. Hinde</i>	
7.1 Introduction	119
7.2 The theory of parent-offspring conflict	119
7.3 Evidence of parent-offspring conflict: battlegrounds for antagonistic interests	120

7.3.1	Behavioural disputes are not evidence of evolutionary conflict	120
7.3.2	Parent-offspring conflict in natural vertebrate populations	121
7.3.3	IGF-II and other examples of genomic imprinting	121
7.3.4	Sex ratio wars in the social insects	122
7.4	Co-evolution of traits in offspring and their parents	122
7.4.1	The co-evolution of supply and demand	123
7.4.2	Plasticity	124
7.5	What is the outcome of co-evolution between offspring and parents?	125
7.5.1	Unstable outcomes	126
7.5.2	Stable outcomes	127
7.6	Future directions	129
8	Sibling competition and cooperation over parental care	133
	<i>Alexandre Roulin and Amélie N. Dreiss</i>	
8.1	Introduction	133
8.2	Forms of sibling competition and cooperation	135
8.2.1	Sub-lethal sibling competition	136
8.2.2	Lethal sibling competition	138
8.2.3	Sib-sib cooperation	139
8.2.4	Sibling negotiation	139
8.3	Conditions promoting sibling competition	140
8.3.1	Food amount	141
8.3.2	Weapons	141
8.3.3	Age difference between siblings	141
8.3.4	Parental manipulation of sibling competition	142
8.3.5	Parental strategies to reduce sibling competition	143
8.4	Conditions promoting sibling cooperation	144
8.5	Perspectives	145
9	Sexual conflict	150
	<i>C. M. Lessells</i>	
9.1	Introduction	150
9.2	How is sexual conflict over parental care resolved?	151
9.2.1	Evolution of manipulation	151
9.2.2	Coevolution of parental care in the two sexes without manipulation	152
9.3	How long to care? Offspring desertion	153
9.3.1	Experimental studies: sex differences in the benefits of care and desertion	158
9.3.2	Experimental evidence for a trade-off between the benefits of parental care and desertion	159
9.4	How much to care?	160
9.4.1	Negotiation	161
9.4.2	Experimental changes in partner effort: mate removal and manipulation	162
9.4.3	Brood division	165
9.4.4	Complementarity and task specialization	166
9.5	Interaction with other evolutionary conflicts within the family	166
9.6	Conclusions and prospects	167

10 Sex allocation	171
<i>Jan Komdeur</i>	
10.1 Introduction	171
10.2 Sex ratio adjustment in birds and mammals	172
10.3 Difficulties applying the theory	172
10.4 Sex ratio bias at the population level	174
10.5 Tests of population sex ratio models	175
10.6 Facultative sex ratio variation	176
10.6.1 Food availability	176
10.6.2 Maternal condition or quality	177
10.6.3 Attractiveness or quality of males	178
10.6.4 Social environment	179
10.6.5 Sibling competition	181
10.6.6 Sexual conflict	182
10.7 Concluding remarks and future directions	183
11 Paternity, maternity, and parental care	189
<i>Suzanne H. Alonzo and Hope Klug</i>	
11.1 An overview of parentage and parental effort	189
11.1.1 The effect of relatedness on parental effort	189
11.1.2 Variation in maternity and paternity	189
11.1.3 Parentage is important, but it is not fitness	190
11.1.4 Interactions within and between the sexes drive parentage and parental effort	190
11.2 Theoretical predictions: does higher parentage always favour greater parental effort?	191
11.2.1 Paternity is expected to affect parental effort	191
11.2.2 The biological importance of model self-consistency	192
11.2.3 A specific self-consistent model relating parentage and care	192
11.2.4 Interactions between the sexes affect parentage and parental care	193
11.2.5 Information about expected parentage affects predictions	194
11.3 Empirical patterns: what determines the relationship between parentage and parental effort?	195
11.3.1 Paternity affects parental care in the bluegill sunfish	195
11.3.2 Paternal care is more likely with high sperm competition in the ocellated wrasse	197
11.3.3 Paternity does not affect paternal effort in western bluebirds	197
11.3.4 Interactions between the sexes affect parentage and parental care in the dunnoek	198
11.3.5 Alloparental care in Canada geese can increase offspring survival	198
11.3.6 Alloparental care in eiders might increase survival of a caring mother's chicks	199
11.3.7 Lessons from comparative studies	199
11.4 Parentage and parental care: what are we missing?	200
11.4.1 <i>A priori</i> predictions should replace <i>post hoc</i> explanations	200

11.4.2	The importance of kin recognition and cues of extra-pair paternity	200
11.4.3	Co-evolutionary and social feedbacks between the sexes	201
11.4.4	Rigorous experiments will be needed to test how multiple traits interact	201
11.4.5	Connecting relatedness, sexual selection, social interactions, and parental care: cooperative breeding as a case study	201
11.4.6	Do we need to change the question?	202
11.5	Conclusions	203
12	Cooperative breeding systems	206
	<i>Michael A. Cant</i>	
12.1	Introduction	206
12.2	Routes to cooperative breeding	208
12.3	Selection for helping behaviour	209
12.3.1	Demography and indiscriminate altruism	210
12.3.2	Discriminate altruism: kin directed care	213
12.3.3	Direct fitness benefits	214
12.4	Negotiation over help	215
12.5	Reproductive conflict	217
12.6	Conclusion and future research	220
13	Brood parasitism	226
	<i>Claire N. Spottiswoode, Rebecca M. Kilner, and Nicholas B. Davies</i>	
13.1	Introduction	226
13.2	Who are the brood parasites, how virulent are they?	227
13.3	The egg-laying stage	227
13.4	The incubation stage	229
13.5	The chick-rearing stage	231
13.5.1	How parasitic parents can improve the nestling environment	231
13.5.2	Costs of chick-killing to parasites	232
13.5.3	Virulent chicks: how to solicit a foster-parent	232
13.5.4	Benign chicks: how to compete with foster-siblings	233
13.5.5	How can hosts defend themselves at the chick stage?	235
13.5.6	How are chick adaptations evolutionarily maintained?	236
13.6	Why are host parents often so gullible?	236
13.7	Conclusions and speculations	239
Section III Evolutionary Genetics of Parental Care		
14	Parental effects in development and evolution	247
	<i>Tobias Uller</i>	
14.1	Introduction	247
14.2	Parental effects and the origins of variation	249
14.2.1	Patterns of phenotypic variation	252
14.3	Parental effects and adaptive evolution	252
14.3.1	Parental effects can increase functionality of novel variation	253

14.3.2	Parental effects can increase recurrence of novel variation	253
14.3.3	Parental effects and genetic accommodation	254
14.4	Evolution of trans-generational plasticity	256
14.4.1	Adaptive evolution of trans-generational plasticity	256
14.4.2	Trans-generational plasticity under parent-offspring conflict	259
14.4.3	Mechanisms of trans-generational plasticity	260
14.5	Exploring the evolutionary dynamics of parental effects	261
15	The quantitative genetic theory of parental effects	267
	<i>Jarrold Hadfield</i>	
15.1	Introduction	267
15.2	The K-L model	268
15.3	An example and its relation to behavioural ecology	273
15.4	The Willham model	274
15.5	Hamilton's rule	276
15.6	The evolution of G	277
15.7	General indirect genetic effect models and parental effect models	279
15.8	Discussion	280
16	Parent-offspring co-adaptation	285
	<i>Mathias Kölliker, Nick J. Royle, and Per T. Smiseth</i>	
16.1	Introduction	285
16.2	Offspring performance traits that convert parental care into offspring fitness	286
16.3	Trait-based Hamilton's rule and parent-offspring covariances	286
16.4	Evolution of the parent-offspring covariance	286
16.5	Co-adaptation models	287
16.5.1	Levels of analysis	287
16.5.2	Sources of correlational selection in families	288
16.5.3	Co-adaptation models	289
16.5.4	Co-adaptation and epigenetic inheritance	292
16.5.5	Other implications of parent-offspring co-adaptation	292
16.6	Experimental evidence for parent-offspring co-adaptation	293
16.6.1	Genotype x family environment interactions, social epistasis, and co-adaptation	294
16.7	Co-adaptation and conflict resolution	297
16.7.1	Genetic covariance and parent-offspring conflict	299
16.8	Conclusions and future directions	299
17	Genetics and epigenetics of parental care	304
	<i>Frances A. Champagne and James P. Curley</i>	
17.1	Introduction	304
17.2	Genetics of care-giving in honeybees (<i>Apis mellifera</i>)	306
17.2.1	Genetic factors regulating hygienic behaviour	306
17.2.2	Transition from nursing to foraging	307
17.3	Laboratory studies of the genetics of parental care in rodents	308
17.3.1	Strain and species differences in parental care	308

17.3.2 Selective breeding	310
17.3.3 Quantitative trait loci (QTL) analysis	311
17.3.4 Gene knockout (KO) studies	312
17.3.5 Sex chromosomes	313
17.4 Gene polymorphisms in primates and humans	313
17.4.1 Serotonin transporter (5-HTT)	313
17.4.2 Mu-opioid receptor (OPRM1)	314
17.4.3 Dopamine D4 receptor (DRD4)	314
17.4.4 Oxytocin receptor (OXTR)	314
17.5 Epigenetic influences on parental care and offspring development: genomic imprinting	315
17.6 Epigenetic influences on parental care and offspring development: nature via nurture	316
17.6.1 Maternal nutrition effects on DNA methylation	317
17.6.2 Post-natal influence of maternal care	317
17.6.3 Transgenerational impact of maternal care	318
17.7 Conclusions	319

Section IV Conclusions

18 The evolution of parental care: summary/conclusions, and implications	327
<i>Nick J. Royle, Per T. Smiseth, and Mathias Kölliker</i>	
18.1 Introduction	327
18.2 What is parental care?	328
18.3 Origin and evolution of parental care	328
18.3.1 Costs and benefits	328
18.3.2 Evolutionary origins	329
18.3.3 The role of the social environment	329
18.4 Conflicts and cooperation in parental care	330
18.4.1 Why are conflicts expected?	330
18.4.2 Who should provide care?	331
18.4.3 Sexual conflict over care	331
18.4.4 Sibling competition, cooperation, and parental favouritism	332
18.4.5 Parent-offspring conflict	333
18.5 Co-evolution and correlated responses	333
18.6 Mechanisms and constraints in parental care	337
18.6.1 Physiological mechanisms	337
18.6.2 Genetic mechanisms	338
18.7 Evolutionary implications of parental care	339
18.7.1 Life-history evolution	339
18.7.2 Social evolution	339
18.7.3 Sexual selection	340
18.7.4 Evolution of personality	340
18.8 Future directions	340
18.9 Conclusions	343

Index	347
