Introduction	I
--------------	---

Part One: Data Journeys

1	Making Data Travel: Technology and Expertise	13
1.1	The Rise of Online Databases in Biology	17
1.2	Packaging Data for Travel	24
1.3	The Emerging Power of Database Curators	31
1.4	Data Journeys and Other Metaphors of Travel	38
2	Managing Data Journeys: Social Structures	45
2.1	The Institutionalization of Data Packaging	46
2.2	Centralization, Dissent, and Epistemic Diversity	52
2.3	Open Data as Global Commodities	56
2.4	Valuing Data	63

Part Two: Data-Centric Science

3	What Counts as Data?	69
3.1	Data in the Philosophy of Science	71
3.2	A Relational Framework	77
3.3	The Nonlocality of Data	84
3.4	Packaging and Modeling	88

4	What Counts as Experiment?	93
	4.1 Capturing Embodied Knowledge	95
	4.2 When Standards Are Not Enough	100
	4.3 Distributed Reasoning in Data Journeys	106
	4.4 Dreams of Automation and Replicability	111
5	What Counts as Theory?	114
	5.1 Classifying Data for Travel	115
	5.2 Bio-Ontologies as Classificatory Theories	121
	5.3 The Epistemic Role of Classification	127
	5.4 Features of Classificatory Theories	130
	5.5 Theory in Data-Centric Science	135

Part Three: Implications for Biology and Philosophy

6	Researching Life in the Digital Age	141
	6.1 Varieties of Data Integration, Different Ways to Understand Organisms	143
	6.2 The Impact of Data Centricism: Dangers and Exclusions	160
	6.3 The Novelty of Data Centricism: Opportunities and Future Developments	169
7	Handling Data to Produce Knowledge	176
	7.1 Problematizing Context	179
	7.2 From Contexts to Situations	181
	7.3 Situating Data in the Digital Age	186
	Conclusion	193
	Acknowledgments	199
	Notes	203
	Bibliography	237
	Index	263
