|---------------------------------------|----|
| Series Foreword                       | ix |
| Preface: Limited Forms Most Beautiful | xi |

|          |                                                      |            |
|----------|------------------------------------------------------|------------|
| <b>1</b> | <b>What Is Convergent Evolution?</b>                 | <b>1</b>   |
|          | Recognizing Convergent Evolution                     | 1          |
|          | Convergent Evolution versus Parallel Evolution?      | 5          |
|          | Evolutionary Constraint and Convergent Evolution     | 7          |
|          | Mimicry, Camouflage, and Convergent Evolution        | 8          |
|          | On the Organization of This Book                     | 9          |
| <br>     |                                                      |            |
| <b>2</b> | <b>Convergent Animals</b>                            | <b>13</b>  |
|          | Locomotion                                           | 13         |
|          | Carnivores: Prey Detection                           | 30         |
|          | Carnivores: Prey Capture                             | 42         |
|          | Herbivores: Plant Processing                         | 50         |
|          | Defense: Antipredator Adaptations                    | 60         |
|          | Organ Systems                                        | 66         |
|          | Reproduction                                         | 81         |
| <br>     |                                                      |            |
| <b>3</b> | <b>Convergent Plants</b>                             | <b>93</b>  |
|          | Arborescence                                         | 93         |
|          | Photoautotrophs: Light Capture                       | 97         |
|          | Photoautotrophs: Carbon Processing                   | 101        |
|          | Defense: Antiherbivore Adaptations                   | 105        |
|          | Defense: Antidehydration Adaptations                 | 112        |
|          | Reproduction                                         | 115        |
| <br>     |                                                      |            |
| <b>4</b> | <b>Convergent Ecosystems</b>                         | <b>135</b> |
|          | One Ecological Role, Many Convergent Players         | 135        |
|          | One Ecosystem Play, Many Convergent Casts of Actors  | 155        |
|          | Isochronous and Heterochronous Ecosystem Convergence | 163        |
|          | A Periodic Table of Niches?                          | 168        |

|   |                                                                                    |     |
|---|------------------------------------------------------------------------------------|-----|
| 5 | <b>Convergent Molecules</b>                                                        | 177 |
|   | Convergent Molecules?                                                              | 177 |
|   | DNA                                                                                | 178 |
|   | Proteins and Protein Functions                                                     | 189 |
|   | Enzymes and Enzyme Functions                                                       | 199 |
|   | Convergent Evolution of Cellular and Tissue Structures?                            | 205 |
| 6 | <b>Convergent Minds</b>                                                            | 209 |
|   | Convergent Minds?                                                                  | 209 |
|   | Problem-Solving Behavior                                                           | 209 |
|   | Group Behavior                                                                     | 228 |
|   | Convergent Mentalities                                                             | 238 |
| 7 | <b>Functional and Developmental Constraint in Convergent Evolution</b>             | 245 |
|   | Convergent Evolution in Theoretical Morphospace                                    | 246 |
|   | Life as We Know It                                                                 | 252 |
|   | Life as We Do Not Know It                                                          | 253 |
|   | A Periodic Table of Life?                                                          | 260 |
| 8 | <b>Philosophical Implications of Convergent Evolution</b>                          | 265 |
|   | The Argument for Unpredictability: Creative Freedom or Chaotic Randomness?         | 266 |
|   | The Argument for Predictability: Comforting Certainty or Depressing Inevitability? | 269 |
|   | Judging the Arguments: Evolutionary Views on Trial                                 | 271 |
|   | The Question of Extraterrestrial Life                                              | 276 |
|   | In Conclusion: A Rewrite of Darwin's View of Life                                  | 276 |
|   | Appendix: A Phylogenetic Classification of Life                                    | 279 |
|   | References                                                                         | 287 |
