Preface xi

1 Introduction 1

- 1.1 Systems Biology and Synthetic Biology 1
- 1.2 What Is a Dynamic Mathematical Model? 3
- 1.3 Why Are Dynamic Mathematical Models Needed? 5
- 1.4 How Are Dynamic Mathematical Models Used? 6
- 1.5 Basic Features of Dynamic Mathematical Models 7
 - 1.5.1 State Variables and Model Parameters 7
 - 1.5.2 Steady-State Behavior and Transient Behavior 8
 - 1.5.3 Linearity and Nonlinearity 8
 - 1.5.4 Global and Local Behavior 8
 - 1.5.5 Deterministic Models and Stochastic Models 9
- 1.6 Dynamic Mathematical Models in Molecular Cell Biology 10
 - 1.6.1 Drug Target Prediction in *Trypanosoma brucei* Metabolism 10
 - 1.6.2 Identifying the Source of Oscillatory Behavior in NF- κ B Signaling 12
 - 1.6.3 Model-Based Design of an Engineered Genetic Toggle Switch 14
 - 1.6.4 Establishing the Mechanism for Neuronal Action Potential Generation 16
- 1.7 Suggestions for Further Reading 18

2 Modeling of Chemical Reaction Networks 21

- 2.1 Chemical Reaction Networks 22
 - 2.1.1 Closed and Open Networks 22
 - 2.1.2 Dynamic Behavior of Reaction Networks 23
 - 2.1.3 Simple Network Examples 26
 - 2.1.4 Numerical Simulation of Differential Equations 35
- 2.2 Separation of Timescales and Model Reduction 39
 - 2.2.1 Separation of Timescales: The Rapid Equilibrium Assumption 41
 - 2.2.2 Separation of Timescales: The Quasi-Steady-State Assumption 45

2.3	Suggestions for Further Reading	48
2.4	Problem Set	48
3	Biochemical Kinetics	55
3.1	Enzyme Kinetics	55
3.1.1	Michaelis-Menten Kinetics	57
3.1.2	Two-Substrate Reactions	62
3.2	Regulation of Enzyme Activity	64
3.2.1	Competitive Inhibition	64
3.2.2	Allosteric Regulation	67
3.3	Cooperativity	68
3.4	Compartmental Modeling and Transport	74
3.4.1	Diffusion	74
3.4.2	Facilitated Transport	75
3.5*	Generalized Mass Action and S-System Modeling	77
3.6	Suggestions for Further Reading	80
3.7	Problem Set	81
4	Analysis of Dynamic Mathematical Models	89
4.1	Phase Plane Analysis	89
4.1.1	Direction Fields	92
4.1.2	Nullclines	93
4.2	Stability	95
4.2.1	Stable and Unstable Steady States	98
4.2.2	Linearized Stability Analysis	100
4.3	Limit-Cycle Oscillations	108
4.4	Bifurcation Analysis	112
4.5	Sensitivity Analysis	115
4.5.1	Local Sensitivity Analysis	116
4.5.2	Determination of Local Sensitivity Coefficients	118
4.6*	Parameter Fitting	119
4.7	Suggestions for Further Reading	122
4.8	Problem Set	122
5	Metabolic Networks	131
5.1	Modeling of Metabolism	132
5.1.1	Example: A Pathway Model	132
5.1.2	Sensitivity Analysis of Metabolic Networks: Metabolic Control Analysis	134

5.2	Metabolic Pathways	136
5.2.1	Flux Control of Unbranched Pathways	136
5.2.2	Regulation of Unbranched Pathways	138
5.2.3	Branched Pathways	141
5.3	Modeling of Metabolic Networks	143
5.3.1	Model Construction	143
5.3.2	Case Study: Modeling the Regulation of the Methionine Cycle	144
5.4*	Stoichiometric Network Analysis	150
5.4.1	Metabolic Pathway Analysis	154
5.4.2	Constraint-Based Modeling: Metabolic Flux Analysis	160
5.5	Suggestions for Further Reading	166
5.6	Problem Set	166
6	Signal Transduction Pathways	175
6.1	Signal Amplification	177
6.1.1	Bacterial Two-Component Signaling Pathways	177
6.1.2	G-Protein Signaling Pathways	180
6.2	Ultrasensitivity	182
6.2.1	Zero-Order Ultrasensitivity	183
6.2.2	Ultrasensitive Activation Cascades	186
6.3	Adaptation	188
6.3.1	Bacterial Chemotaxis	188
6.4	Memory and Irreversible Decision-Making	193
6.4.1	Apoptosis	194
6.5	Frequency Encoding	197
6.5.1	Calcium Oscillations	197
6.6*	Frequency Response Analysis	200
6.6.1	Definition of the Frequency Response	201
6.6.2	Interpretation of the Frequency Response	203
6.6.3	Construction of the Frequency Response	208
6.7	Suggestions for Further Reading	213
6.8	Problem Set	213
7	Gene Regulatory Networks	225
7.1	Modeling of Gene Expression	226
7.1.1	Unregulated Gene Expression	226
7.1.2	Regulated Gene Expression	228
7.1.3	Gene Regulatory Networks	234

7.2	Genetic Switches	236
7.2.1	The <i>lac</i> Operon	236
7.2.2	The Phage Lambda Decision Switch	242
7.2.3	The Collins Toggle Switch	249
7.3	Oscillatory Gene Networks	253
7.3.1	The Goodwin Oscillator	253
7.3.2	Circadian Rhythms	254
7.3.3	Synthetic Oscillatory Gene Networks	258
7.4	Cell-to-Cell Communication	263
7.4.1	Bacterial Quorum Sensing	264
7.4.2	Engineered Cell-to-Cell Communication	267
7.4.3	Synchronization of Oscillating Cells	272
7.5	Computation by Gene Regulatory Networks	272
7.5.1	Promoters as Logic Gates	273
7.5.2	Digital Representations of Gene Circuits	275
7.5.3	Complex Gene Regulatory Networks	278
7.6*	Stochastic Modeling of Biochemical and Genetic Networks	280
7.6.1	A Discrete Modeling Framework	283
7.6.2	The Chemical Master Equation	284
7.6.3	Gillespie's Stochastic Simulation Algorithm	289
7.6.4	Examples	292
7.7	Suggestions for Further Reading	295
7.8	Problem Set	296
8	Electrophysiology	315
8.1	Membrane Potential	316
8.1.1	The Nernst Potential	316
8.1.2	The Membrane Model	318
8.2	Excitable Membranes	320
8.2.1	Voltage-Gated Ion Channels	321
8.2.2	The Morris-Lecar Model	322
8.3	Intercellular Communication	326
8.3.1	Synaptic Transmission	327
8.4*	Spatial Modeling	330
8.4.1	Propagation of Membrane Voltage	330
8.4.2	Passive Membrane	332
8.4.3	Excitable Membrane: Action Potential Propagation	332
8.5	Suggestions for Further Reading	333
8.6	Problem Set	334

A	Molecular Cell Biology	343
A.1	Cells	343
A.2	The Chemistry of Life	345
A.3	Macromolecules	347
A.4	Model Organisms	355
B	Mathematical Fundamentals	357
B.1	Differential Calculus	357
B.2	Linear Algebra	363
B.3	Probability	368
C	Computational Software	371
C.1	XPPAUT	372
C.2	MATLAB	381
	Bibliography	395
	Index	401
