DETAILED CONTENTS

PREFACE

1

GENETICS: AN INTRODUCTION 1

THE BRANCHES OF GENETICS 2

RELATIONSHIP OF GENETICS TO OTHER AREAS OF BIOLOGY 2

GENETICISTS AND GENETICS RESEARCH 2

What Are Geneticists? 3

What Is Basic and Applied Research? 3

What Organisms Are Suitable for Genetic Experimentation? 5

THE DEVELOPMENT OF THE FIELD OF GENETICS 9

What Is the Nature of the Genetic Material? 9

How Is the Genetic Material Transmitted from Generation to Generation? 9

What Are Genetic Maps? 12

What Are Genes at the Molecular Level? 12

How Is Gene Expression Controlled? 14

What Experimental Approaches Are Commonly Used in Genetics Research Today? 14

SUMMARY 16

2

MENDELIAN GENETICS 17

PRINCIPAL POINTS 18

GENOTYPE AND PHENOTYPE 18

MENDEL'S EXPERIMENTAL DESIGN 20

MONOHYBRID CROSSES AND MENDEL'S PRINCIPLE OF SEGREGATION 22

The Principle of Segregation 26

Box 2.1: Genetic Terminology 27

Representing Crosses with a Branch Diagram 27

Box 2.2: Elementary Principles of Probability 28

Confirming the Principle of Segregation: The Use of Testcrosses 29

DIHYBRID CROSSES AND THE MENDELIAN PRINCIPLE OF INDEPENDENT ASSORTMENT 31

The Principle of Independent Assortment 31

Branch Diagram of Dihybrid Crosses 33

Trihybrid Crosses 34

"REDISCOVERY" OF MENDEL'S PRINCIPLES 34

STATISTICAL ANALYSIS OF GENETIC DATA: THE CHI-SQUARE TEST 36

MENDELIAN GENETICS IN HUMANS 38

Pedigree Analysis 38

Examples of Human Genetic Traits 39

SUMMARY 41

ANALYTICAL APPROACHES FOR SOLVING GENETICS PROBLEMS 42

QUESTIONS AND PROBLEMS 43

3

CHROMOSOMAL BASIS OF INHERITANCE, SEX DETERMINATION, AND SEX LINKAGE 47

PRINCIPAL POINTS 48

MITOSIS AND MEIOSIS 48

Chromosome Complement of Eukaryotes 49

Asexual and Sexual Reproduction 50

Mitosis 50

Genetic Significance of Mitosis 56

Meiosis 56

Genetic Significance of Meiosis 61

Locations of Meiosis in the Life Cycle 62

CHROMOSOME THEORY OF INHERITANCE 66

Sex Chromosomes 67

Sex Linkage 69

Box 3.1: Genetic Symbols Revisited 71

Nondisjunction of X Chromosomes 73

SEX DETERMINATION 77

Genotypic Sex Determination Systems 77

Environmental Sex Determination Systems 82

ANALYSIS OF SEX-LINKED TRAITS IN HUMANS 84

X-Linked Recessive Inheritance 84

X-Linked Dominant Inheritance 86

Y-Linked Inheritance 87

SUMMARY 88**ANALYTICAL APPROACHES FOR SOLVING GENETICS PROBLEMS 89****QUESTIONS AND PROBLEMS 91**

4

EXTENSIONS OF MENDELIAN GENETIC ANALYSIS**97****PRINCIPAL POINTS 98****MULTIPLE ALLELES 98**

ABO Blood Groups 98

Drosophila Eye Color 100**MODIFICATIONS OF DOMINANCE RELATIONSHIPS 102**

Incomplete Dominance 102

Codominance 104

GENE INTERACTIONS AND MODIFIED MENDELIAN RATIOS 106

Gene Interactions That Produce New Phenotypes 106

Epistasis 109

ESSENTIAL GENES AND LETHAL ALLELES 116**THE ENVIRONMENT AND GENE EXPRESSION 117**

Penetrance and Expressivity 117

Effects of the Internal Environment 120

Effects of the External Environment 123

Nature Versus Nurture 125

SUMMARY 126**ANALYTICAL APPROACHES FOR SOLVING GENETICS PROBLEMS 127****QUESTIONS AND PROBLEMS 128**

5

GENETIC MAPPING IN EUKARYOTES I**133****PRINCIPAL POINTS 134****DISCOVERY OF GENETIC LINKAGE 135**

Linkage in the Sweet Pea 135

Morgan's Linkage Experiments with *Drosophila* 136**GENE RECOMBINATION AND THE ROLE OF CHROMOSOMAL EXCHANGE 139**

Corn Experiments 139

Drosophila Experiments 140

Crossing-Over at the Four-Chromatid Stage of Meiosis 141

CONSTRUCTION OF GENETIC MAPS 144

Detecting Linkage Through Testcrosses 145

Gene Mapping by Using Two-Point Testcrosses 147

Generating a Genetic Map 149

Double Crossovers 151

Three-Point Cross 152

Mapping Chromosomes by Using Three-Point Testcrosses 153

SUMMARY 159**ANALYTICAL APPROACHES FOR SOLVING GENETICS PROBLEMS 159****QUESTIONS AND PROBLEMS 161**

6

GENETIC MAPPING IN EUKARYOTES II**168****PRINCIPAL POINTS 169****TETRAD ANALYSIS 169**

Using Random-Spore Analysis to Map Genes in Haploid Eukaryotes 171

Using Tetrad Analysis to Map Two Linked Genes 171

Calculating Gene-Centromere Distance in Organisms with Linear Tetrads 174

MITOTIC RECOMBINATION 178

Discovery of Mitotic Recombination 178

Mechanism of Mitotic Crossing-Over 178

Mitotic Recombination in the Fungus *Aspergillus nidulans* 180

MAPPING THE HUMAN GENOME 182

Construction of Genetic Linkage Maps 182

Construction of Physical Maps 183

Integration of Genetic Linkage Maps and Physical Maps 185

SUMMARY 185

ANALYTICAL APPROACHES FOR SOLVING GENETICS PROBLEMS 187

QUESTIONS AND PROBLEMS 188

7

CHROMOSOMAL MUTATIONS 190

PRINCIPAL POINTS 191

TYPES OF CHROMOSOMAL MUTATIONS 191

VARIATIONS IN CHROMOSOME STRUCTURE 192

Deletion 193

Duplication 195

Inversion 197

Translocation 199

Position Effect 205

Fragile Sites and Fragile X Syndrome 205

VARIATIONS IN CHROMOSOME NUMBER 207

Changes in One or a Few Chromosomes 207

Changes in Complete Sets of Chromosomes 211

CHROMOSOME REARRANGEMENTS THAT ALTER GENE EXPRESSION 216

Amplification or Deletion of Genes 216

Inversions That Alter Gene Expression 216

Transpositions That Alter Gene Expression 217

SUMMARY 217

ANALYTICAL APPROACHES FOR SOLVING GENETICS PROBLEMS 218

QUESTIONS AND PROBLEMS 219

8

GENETIC MAPPING IN BACTERIA AND BACTERIOPHAGES 224

PRINCIPAL POINTS 225

GENETIC ANALYSIS OF BACTERIA 225

BACTERIAL TRANSFORMATION 227

CONJUGATION IN BACTERIA 229

Discovery of Conjugation in *E. coli* 229

The Sex Factor *F* 230

High-Frequency Recombination Strains 231

F' Factors 233

Using Conjugation and Interrupted Mating to Map Bacterial Genes 234

Circularity of the *E. coli* Map 234

TRANSDUCTION IN BACTERIA 237

Bacteriophages: An Introduction 237

Transduction Mapping of Bacterial Chromosomes 239

MAPPING GENES IN BACTERIOPHAGES 245

FINE-STRUCTURE ANALYSIS OF A BACTERIOPHAGE GENE 247

Recombination Analysis of *rII* Mutants 248

Deletion Mapping 250

Defining Genes by Complementation Tests 254

SUMMARY 256

ANALYTICAL APPROACHES FOR SOLVING GENETICS PROBLEMS 258

QUESTIONS AND PROBLEMS 260

9

THE BEGINNINGS OF MOLECULAR GENETICS: GENE FUNCTION 265

PRINCIPAL POINTS 266

GENE CONTROL OF ENZYME STRUCTURE 266

Garrod's Hypothesis of Inborn Errors of Metabolism 266

One Gene-One Enzyme Hypothesis 267

GENETICALLY BASED ENZYME DEFICIENCIES IN HUMANS 272

Phenylketonuria 272

Albinism 274

Lesch-Nyhan Syndrome 274

Tay-Sachs Disease 275

GENE CONTROL OF PROTEIN STRUCTURE 276

Sickle-Cell Anemia: Symptoms and Causes 276

Other Hemoglobin Mutants 277

Biochemical Genetics of the Human ABO Blood Groups	278
Cystic Fibrosis	280
GENETIC COUNSELING	281
Carrier Detection	282
Fetal Analysis	282
SUMMARY	283
ANALYTICAL APPROACHES FOR SOLVING GENETICS PROBLEMS	284
QUESTIONS AND PROBLEMS	286

10

THE STRUCTURE OF GENETIC MATERIAL	291
PRINCIPAL POINTS	292
THE NATURE OF GENETIC MATERIAL: DNA AND RNA	292
The Discovery of DNA as Genetic Material	293
The Discovery of RNA as Genetic Material	297
THE CHEMICAL COMPOSITION OF DNA AND RNA	300
The Physical Structure of DNA: The Double Helix	302
Other DNA Structures	306
DNA in the Cell	307
Bends in DNA	309
SUMMARY	309
ANALYTICAL APPROACHES FOR SOLVING GENETICS PROBLEMS	310
QUESTIONS AND PROBLEMS	311

11

THE ORGANIZATION OF DNA IN CHROMOSOMES	313
PRINCIPAL POINTS	314
STRUCTURAL CHARACTERISTICS OF BACTERIAL AND VIRAL CHROMOSOMES	314
Bacterial Chromosomes	314
T-Even Phage Chromosomes	317
Bacteriophage Φ X174 Chromosome	321
Bacteriophage λ Chromosome	322

STRUCTURAL CHARACTERISTICS OF EUKARYOTIC CHROMOSOMES	323
The Karyotype	324
Chromosomal Banding Patterns	324
Cellular DNA Content and the Structural or Organizational Complexity of the Organism	326
The Molecular Structure of the Eukaryotic Chromosome	327
Centromeres and Telomeres	333
UNIQUE-SEQUENCE DNA AND REPETITIVE-SEQUENCE DNA IN EUKARYOTIC CHROMOSOMES	336
Unique-Sequence DNA	336
Repetitive-Sequence DNA	336
SUMMARY	338
ANALYTICAL APPROACHES FOR SOLVING GENETICS PROBLEMS	340
QUESTIONS AND PROBLEMS	340

12

DNA REPLICATION AND RECOMBINATION	343
PRINCIPAL POINTS	344
DNA REPLICATION IN PROKARYOTES	344
Early Models for DNA Replication	344
The Meselson-Stahl Experiment	345
Box 12.1: Equilibrium Density Gradient Centrifugation	347
Enzymes Involved in DNA Synthesis	348
Molecular Details of DNA Replication in Prokaryotes	351
DNA REPLICATION IN EUKARYOTES	361
Molecular Details of DNA Synthesis in Eukaryotes	361
Replicating the Ends of Chromosomes	366
Assembly of New DNA into Nucleosomes	367
DNA RECOMBINATION	369
Crossing-over: Breakage and Rejoining of DNA	369
The Holliday Model for Recombination	369
Gene Conversion and Mismatch Repair	372
SUMMARY	373
ANALYTICAL APPROACHES FOR SOLVING GENETICS PROBLEMS	374
QUESTIONS AND PROBLEMS	375

13

TRANSCRIPTION, RNA MOLECULES, AND RNA PROCESSING 379

PRINCIPAL POINTS 380

THE TRANSCRIPTION PROCESS 381

RNA Synthesis 381

Classes of RNA and the Genes That Code for Them 383

Box 13.1: Sucrose Gradient Centrifugation 384

TRANSCRIPTION OF PROTEIN-CODING GENES 385

Prokaryotes 385

Eukaryotes 389

mRNA Molecules 391

TRANSCRIPTION OF OTHER GENES 400

Ribosomal RNA and Ribosomes 400

Transfer RNA 408

SUMMARY 412

ANALYTICAL APPROACHES FOR SOLVING GENETICS PROBLEMS 414

QUESTIONS AND PROBLEMS 415

14

THE GENETIC CODE AND THE TRANSLATION OF THE GENETIC MESSAGE 418

PRINCIPAL POINTS 419

PROTEIN STRUCTURE 419

Chemical Structure of Proteins 419

Molecular Structure of Proteins 420

THE NATURE OF THE GENETIC CODE 423

The Genetic Code Is a Triplet Code 423

Deciphering the Genetic Code 425

Nature and Characteristics of the Genetic Code 426

TRANSLATION OF THE GENETIC MESSAGE 429

Aminoacyl-tRNA Molecules 430

Initiation of Translation 430

Elongation of the Polypeptide Chain 433

Termination of Translation 437

PROTEIN SORTING IN THE CELL 439

Proteins Distributed by the Endoplasmic Reticulum 439

Proteins Transported into Mitochondria and Chloroplasts 440

Proteins Transported into the Nucleus 441

SUMMARY 441

ANALYTICAL APPROACHES FOR SOLVING GENETICS PROBLEMS 443

QUESTIONS AND PROBLEMS 444

15

RECOMBINANT DNA TECHNOLOGY AND THE MANIPULATION OF DNA 446

PRINCIPAL POINTS 447

GENE CLONING 448

Restriction Enzymes 448

Cloning Vectors and the Cloning of DNA 453

CONSTRUCTION OF GENOMIC LIBRARIES, CHROMOSOME LIBRARIES, AND cDNA LIBRARIES 458

Genomic Libraries 458

Chromosome Libraries 460

cDNA Libraries 461

IDENTIFYING SPECIFIC CLONED SEQUENCES IN cDNA LIBRARIES AND GENOMIC LIBRARIES 463

Identifying Specific Cloned Sequences in a cDNA Library 463

Identifying Specific Cloned Sequences in a Genomic Library 463

Box 15.1: Labeling of DNA 466

Identifying Specific DNA Sequences in Libraries Using Heterologous Probes 467

Identifying Genes in Libraries by Complementation of Mutations 467

Identifying Genes or cDNAs in Libraries Using Oligonucleotide Probes 467

ANALYSIS OF GENES AND GENE TRANSCRIPTS 468

Restriction Enzyme Analysis of Cloned DNA Sequences 469

Restriction Enzyme Analysis of Genes in the Genome 470

Analysis of Gene Transcripts 473

DNA SEQUENCE ANALYSIS 473

Dideoxy (Sanger) DNA Sequencing 473

Analysis of DNA Sequences 476	
POLYMERASE CHAIN REACTION (PCR) 476	
APPLICATIONS OF RECOMBINANT DNA TECHNOLOGY 479	
Analysis of Biological Processes 479	
Diagnosis of Human Genetic Diseases by DNA Analysis 479	
Isolation of Human Genes 481	
Human Genome Project 486	
DNA Typing 487	
Gene Therapy 489	
Commercial Products 490	
Genetic Engineering of Plants 491	
SUMMARY 493	
ANALYTICAL APPROACHES FOR SOLVING GENETICS PROBLEMS 494	
QUESTIONS AND PROBLEMS 495	

16

REGULATION OF GENE EXPRESSION IN BACTERIA AND BACTERIOPHAGES 501

PRINCIPAL POINTS 502	
GENE REGULATION OF LACTOSE UTILIZATION IN <i>E. COLI</i> 503	
Lactose as a Carbon Source for <i>E. coli</i> 503	
Experimental Evidence for the Regulation of the <i>lac</i> Genes 505	
Jacob and Monod's Operon Model for the Regulation of the <i>lac</i> Genes 507	
Positive Control of the <i>lac</i> Operon 512	
Molecular Details of <i>lac</i> Operon Regulation 514	
TRYPTOPHAN OPERON OF <i>E. COLI</i> 517	
Gene Organization of the Tryptophan Biosynthesis Genes 517	
Regulation of the <i>trp</i> Operon 517	
Regulation of Other Amino Acid Biosynthesis Operons 521	
SUMMARY OF OPERON FUNCTION 522	
GENE REGULATION IN BACTERIOPHAGES 523	
Regulation of Gene Expression in Phage Lambda 523	
SUMMARY 528	

ANALYTICAL APPROACHES FOR SOLVING GENETICS PROBLEMS 530

QUESTIONS AND PROBLEMS 531

17

REGULATION OF GENE EXPRESSION AND DEVELOPMENT IN EUKARYOTES 535

PRINCIPAL POINTS 536	
LEVELS OF CONTROL OF GENE EXPRESSION IN EUKARYOTES 537	
Transcriptional Control 537	
RNA Processing Control 552	
Transport Control 555	
mRNA Translation Control 555	
mRNA Degradation Control 556	
Protein Degradation Control 555	
GENE REGULATION IN DEVELOPMENT AND DIFFERENTIATION 558	
Genomic Activity in Higher Eukaryotes 558	
Constancy of DNA in the Genome During Development 558	
Differential Gene Activity Among Tissues and During Development 560	
Immunogenetics and Chromosome Rearrangements During Development 564	
GENETIC REGULATION OF DEVELOPMENT IN <i>DROSOPHILA</i> 569	
<i>Drosophila</i> Developmental Stages 569	
Embryonic Development 569	
Imaginal Discs 572	
Homeotic Genes 574	
SUMMARY 577	
ANALYTICAL APPROACHES FOR SOLVING GENETICS PROBLEMS 579	
QUESTIONS AND PROBLEMS 580	

18

GENETICS OF CANCER 585

PRINCIPAL POINTS 586	
RELATIONSHIP OF THE CELL CYCLE TO CANCER 587	

THE TWO-HIT MUTATION MODEL FOR CANCER 589**GENES AND CANCER 590**

Oncogenes 591

Tumor Suppressor Genes 603

Mutator Genes 608

THE MULTISTEP NATURE OF CANCER 608**CHEMICALS AND RADIATION AS CARCINOGENS 610**

Chemical Carcinogens 610

Radiation 610

SUMMARY 611**ANALYTICAL APPROACHES FOR SOLVING GENETICS PROBLEMS 612****QUESTIONS AND PROBLEMS 613**

19**GENE MUTATION 615****PRINCIPAL POINTS 615****ADAPTATION VERSUS MUTATION 617****MUTATIONS DEFINED 619**

Types of Mutations 619

Reverse Mutations and Suppressor Mutations 622

CAUSES OF MUTATION 624

Spontaneous Mutations 624

Induced Mutations 629

THE AMES TEST: A SCREEN FOR POTENTIAL MUTAGENS 636**DNA REPAIR MECHANISMS 635**

Direct Correction of Mutational Lesions 635

Repair Involving Excision of Base Pairs 638

Human Genetic Diseases Resulting from DNA Replication and Repair Errors 642

SCREENING PROCEDURES FOR THE ISOLATION OF MUTANTS 644

Visible Mutations 644

Nutritional Mutations 644

Conditional Mutations 646

Modern Molecular Screens 647

SUMMARY 647**ANALYTICAL APPROACHES FOR SOLVING GENETICS PROBLEMS 648****QUESTIONS AND PROBLEMS 650**

20**TRANSPOSABLE ELEMENTS 654****PRINCIPAL POINTS 655****TRANSPOSABLE ELEMENTS IN PROKARYOTES 655**

Insertion Sequences 656

Transposons 658

IS Elements and Transposons in Plasmids 660

Bacteriophage Mu 662

TRANSPOSABLE ELEMENTS IN EUKARYOTES 663

Transposons in Plants 663

Box 20.1: Barbara McClintock (1902–1992) 664

Ty Elements in Yeast 671

Drosophila Transposons 672

Human Retrotransposons 674

SUMMARY 675**ANALYTICAL APPROACHES FOR SOLVING GENETICS PROBLEMS 676****QUESTIONS AND PROBLEMS 676**

21**EXTRANUCLEAR GENETICS 679****PRINCIPAL POINTS 680****ORGANIZATION OF EXTRANUCLEAR GENOMES 681**

Mitochondrial Genome 681

Chloroplast Genome 688

RNA Editing 692

Origin of Mitochondria and Chloroplasts 693

RULES OF EXTRANUCLEAR INHERITANCE 693**EXAMPLES OF EXTRANUCLEAR INHERITANCE 694**Leaf Variegation in the Higher Plant *Mirabilis jalapa* 694The [*poky*] Mutant of *Neurospora* 697Yeast *petite* Mutants 698Extranuclear Genetics of *Chlamydomonas* 702

Human Genetic Diseases and Mitochondrial DNA Defects 702

Exceptions to Maternal Inheritance 704

Infectious Heredity—Killer Yeast 704

MATERNAL EFFECT 705**GENOMIC IMPRINTING 707**

SUMMARY 708

ANALYTICAL APPROACHES FOR SOLVING GENETICS
PROBLEMS 709

QUESTIONS AND PROBLEMS 710

22

POPULATION GENETICS 714

PRINCIPAL POINTS 715

GENETIC STRUCTURE OF POPULATIONS 717

Genotypic Frequencies 717

Allelic Frequencies 717

Box 22.1: Sample Calculation of Genotypic and Allelic Frequencies for Hemoglobin Variants Among Nigerians Where Multiple Alleles Are Present 720

THE HARDY-WEINBERG LAW 721

Assumptions of the Hardy-Weinberg Law 721

Box 22.2: Hardy, Weinberg, and the History of Their Contribution to Population Genetics 722

Predictions of the Hardy-Weinberg Law 723

Derivation of the Hardy-Weinberg Law 723

Extensions of the Hardy-Weinberg Law to Loci with More Than Two Alleles 725

Extensions of the Hardy-Weinberg Law to Sex-linked Alleles 725

Testing for Hardy-Weinberg Proportions 726

Using the Hardy-Weinberg Law to Estimate Allelic Frequencies 727

GENETIC VARIATION IN SPACE AND TIME 728

GENETIC VARIATION IN NATURAL POPULATIONS 729

Models of Genetic Variation 729

Measuring Genetic Variation with Protein Electrophoresis 730

Box 22.3: Analysis of Genetic Variation with Protein Electrophoresis 732

Measuring Genetic Variation with RFLPs and DNA Sequencing 734

CHANGES IN GENETIC STRUCTURE OF POPULATIONS 736

Mutation 737

Genetic Drift 739

Migration 745

Natural Selection 747

Simultaneous Effects of Mutation and Selection 756

Nonrandom Mating 757

SUMMARY OF THE EFFECTS OF EVOLUTIONARY
PROCESSES ON THE GENETIC STRUCTURE OF A
POPULATION 758

Changes in Allelic Frequency Within a Population 758

Genetic Divergence Among Populations 758

Increases and Decreases in Genetic Variation Within Populations 758

SUMMARY OF THE EFFECTS OF EVOLUTIONARY
PROCESSES ON THE CONSERVATION OF GENETIC
RESOURCES 759

MOLECULAR GENETIC TECHNIQUES AND EVOLUTION 759

DNA Sequence Variation 759

DNA Length Polymorphisms 761

Evolution of Multigene Families Through Gene Duplication 762

Evolution in Mitochondrial DNA Sequences 763

Concerted Evolution 763

Evolutionary Relationships Revealed by RNA and DNA Sequences 764

SUMMARY 765

ANALYTICAL APPROACHES FOR SOLVING GENETICS
PROBLEMS 766

QUESTIONS AND PROBLEMS 767

23

QUANTITATIVE GENETICS 772

PRINCIPAL POINTS 773

THE NATURE OF CONTINUOUS TRAITS 774

Why Some Traits Have Continuous Phenotypes 775

Questions Studied in Quantitative Genetics 776

STATISTICAL TOOLS 776

Samples and Populations 776

Distributions 777

The Mean 778

The Variance and the Standard Deviation 779

Correlation 780

Regression 783

Analysis of Variance 784

POLYGENIC INHERITANCE 784

Inheritance of Ear Length in Corn 784

Polygene Hypothesis for Quantitative Inheritance 786

Determining the Number and Location of Polygenes for a Quantitative Trait 787

HERITABILITY 789

Components of the Phenotypic Variance 789

Broad-Sense and Narrow-Sense Heritability 791

Understanding Heritability 792

How Heritability Is Calculated 794

RESPONSE TO SELECTION 796

Estimating the Response to Selection 796

Genetic Correlations 797

SUMMARY 799

ANALYTICAL APPROACHES FOR SOLVING GENETICS PROBLEMS 800

QUESTIONS AND PROBLEMS 802

SUGGESTED READINGS R-1

SOLUTIONS TO SELECTED QUESTIONS AND PROBLEMS S-1
