- 26** Regulation of Gene Expression 786

ANSWERS TO
SELECTED PROBLEMS A-1

GLOSSARY G-1

CREDITS C-1

INDEX I-1

CONTENTS

CHAPTER 1

Biochemistry and the Language of Chemistry 2

- 1.1 The Science of Biochemistry 4
 - The Origins of Biochemistry 4
 - The Tools of Biochemistry 6
 - Biochemistry as a Discipline and an Interdisciplinary Science 6
- 1.2 The Elements and Molecules of Living Systems 7
 - The Chemical Elements of Cells and Organisms 7
 - The Origin of Biomolecules and Cells 8
 - The Complexity and Size of Biological Molecules 9
 - The Biopolymers: Proteins, Nucleic Acids, and Carbohydrates 9
 - Lipids and Membranes 11
- 1.3 Distinguishing Characteristics of Living Systems 12
- 1.4 The Unit of Biological Organization: The Cell 13
- 1.5 Biochemistry and the Information Explosion 14

- 2.3 The Role of Water in Biological Processes 26
 - The Structure and Properties of Water 26
 - Water as a Solvent 28
 - Ionic Compounds in Aqueous Solution 28
 - Hydrophilic Molecules in Aqueous Solution 28
 - Hydrophobic Molecules in Aqueous Solution 29
 - Amphipathic Molecules in Aqueous Solution 29
- 2.4 Acid-Base Equilibria 30
 - Acids and Bases: Proton Donors and Acceptors 30
 - Ionization of Water and the Ion Product 30
 - The pH Scale and the Physiological pH Range 32
 - Weak Acid and Base Equilibria: K_a and pK_a 33
 - Titration of Weak Acids: The Henderson-Hasselbalch Equation 33
 - Buffer Solutions 34
 - Molecules with Multiple Ionizing Groups 35
- 2.5 Interactions Between Macroions in Solution 38
 - Solubility of Macroions and pH 38
 - The Influence of Small Ions: Ionic Strength 40
- TOOLS OF BIOCHEMISTRY 2A *Electrophoresis and Isoelectric Focusing* 44
- FOUNDATION FIGURE *Biomolecules: Structure and Function* 46

CHAPTER 2

The Chemical Foundation of Life: Weak Interactions in an Aqueous Environment 18

- 2.1 The Importance of Noncovalent Interactions in Biochemistry 20
- 2.2 The Nature of Noncovalent Interactions 21
 - Charge-Charge Interactions 22
 - Dipole and Induced-Dipole Interactions 23
 - Van der Waals Interactions 24
 - Hydrogen Bonds 25

CHAPTER 3

The Energetics of Life 48

- 3.1 Free Energy 50
 - Thermodynamic Systems 50
 - The First Law of Thermodynamics and Enthalpy 50
 - The Driving Force for a Process 51
 - Entropy 52
 - The Second Law of Thermodynamics 53
- 3.2 Free Energy: The Second Law in Open Systems 53
 - Free Energy Defined in Terms of Enthalpy and Entropy Changes in the System 53

- An Example of the Interplay of Enthalpy and Entropy:
The Transition Between Liquid Water and Ice 54
- The Interplay of Enthalpy and Entropy: A Summary 54
- Free Energy and Useful Work 55

3.3 The Relationships Between Free Energy, the Equilibrium State, and Non-Equilibrium Concentrations of Reactants and Products 56

Equilibrium, Le Chatelier's Principle, and the Standard State 56

Changes in Concentration and ΔG 56

ΔG versus ΔG° , Q versus K , and Homeostasis versus Equilibrium 57

Water, H^+ in Buffered Solutions, and the "Biochemical Standard State" 59

3.4 Free Energy in Biological Systems 60

Organic Phosphate Compounds as Energy Transducers 60

Phosphoryl Group Transfer Potential 63

Free Energy and Concentration Gradients: A Close Look at Diffusion Through a Membrane 63

ΔG and Oxidation/Reduction Reactions in Cells 64

Quantification of Reducing Power: Standard Reduction Potential 64

Standard Free Energy Changes in Oxidation–Reduction Reactions 66

Calculating Free Energy Changes for Biological Oxidations under Nonequilibrium Conditions 66

A Brief Overview of Free Energy Changes in Cells 67

CHAPTER 4

Nucleic Acids 72

4.1 Nucleic Acids—Informational Macromolecules 74

The Two Types of Nucleic Acid: DNA and RNA 74

Properties of the Nucleotides 77

Stability and Formation of the Phosphodiester Linkage 78

4.2 Primary Structure of Nucleic Acids 79

The Nature and Significance of Primary Structure 79

DNA as the Genetic Substance: Early Evidence 80

4.3 Secondary and Tertiary Structures of Nucleic Acids 81

The DNA Double Helix 81

Data Leading Toward the Watson–Crick Double-Helix Model 81

X-Ray Analysis of DNA Fibers 81

Semiconservative Nature of DNA Replication 83

Alternative Nucleic Acid Structures: B and A

Helices 85

DNA and RNA Molecules in Vivo 86

DNA Molecules 86

Circular DNA and Supercoiling 87

Single-Stranded Polynucleotides 89

4.4 Alternative Secondary Structures of DNA 90

Left-Handed DNA (Z-DNA) 90

Hairpins and Cruciforms 91

Triple Helices 92

G-Quadruplexes 92

4.5 The Helix-to-Random Coil Transition: Nucleic Acid Denaturation 93

4.6 The Biological Functions of Nucleic Acids: A Preview of Genetic Biochemistry 94

Genetic Information Storage: The Genome 94

Replication: DNA to DNA 94

Transcription: DNA to RNA 95

Translation: RNA to Protein 95

TOOLS OF BIOCHEMISTRY 4A *Manipulating DNA* 99

TOOLS OF BIOCHEMISTRY 4B *An Introduction to X-Ray Diffraction* 104

CHAPTER 5

Introduction to Proteins: The Primary Level of Protein Structure 108

5.1 Amino Acids 111

Structure of the α -Amino Acids 111

Stereochemistry of the α -Amino Acids 111

Properties of Amino Acid Side Chains: Classes of α -Amino Acids 115

Amino Acids with Nonpolar Aliphatic Side Chains 115

Amino Acids with Nonpolar Aromatic Side Chains 115

Amino Acids with Polar Side Chains 116

Amino Acids with Positively Charged (Basic) Side Chains 116

Amino Acids with Negatively Charged (Acidic) Side Chains 117

Rare Genetically Encoded Amino Acids 117

Modified Amino Acids 117

5.2 Peptides and the Peptide Bond 118

The Structure of the Peptide Bond 118

Stability and Formation of the Peptide Bond 119

Peptides 119

Polypeptides as Polyampholytes 120

5.3 Proteins: Polypeptides of Defined Sequence 121

5.4 From Gene to Protein 123

The Genetic Code 123

Post-translational Processing of Proteins 124

5.5 From Gene Sequence to Protein Function 125

5.6 Protein Sequence Homology 127

TOOLS OF BIOCHEMISTRY 5A *Protein Expression and Purification* 131

TOOLS OF BIOCHEMISTRY 5B *Mass, Sequence, and Amino Acid Analyses of Purified Proteins* 138

CHAPTER 6

The Three-Dimensional Structure of Proteins 144

6.1 Secondary Structure: Regular Ways to Fold the Polypeptide Chain 146

Theoretical Descriptions of Regular Polypeptide Structures 146

α Helices and β Sheets 148

Describing the Structures: Helices and Sheets 148

Amphipathic Helices and Sheets 149

Ramachandran Plots 150

6.2 Fibrous Proteins: Structural Materials of Cells and Tissues 152

The Keratins 152

Fibroin 153

Collagen 154

6.3 Globular Proteins: Tertiary Structure and Functional Diversity 156

Different Folding for Different Functions 156

Different Modes of Display Aid Our Understanding of Protein Structure 156

Varieties of Globular Protein Structure: Patterns of Main-Chain Folding 157

6.4 Factors Determining Secondary and Tertiary Structure 161

The Information for Protein Folding 161

The Thermodynamics of Folding 161

Conformational Entropy 162

Charge-Charge Interactions 162

Internal Hydrogen Bonds 163

Van der Waals Interactions 163

The Hydrophobic Effect 163

Disulfide Bonds and Protein Stability 164

Prosthetic Groups, Ion-binding, and Protein Stability 165

6.5 Dynamics of Globular Protein Structure 166

Kinetics of Protein Folding 166

The "Energy Landscape" Model of Protein Folding 166

Intermediate and Off-Pathway States in Protein Folding 168

Chaperones Facilitate Protein Folding in Vivo 168

Protein Misfolding and Disease 170

6.6 Prediction of Protein Secondary and Tertiary Structure 171

Prediction of Secondary Structure 171

Tertiary Structure Prediction: Computer Simulation of Folding 171

6.7 Quaternary Structure of Proteins 172

Symmetry in Multisubunit Proteins: Homotypic

Protein-Protein Interactions 172

Heterotypic Protein-Protein Interactions 174

TOOLS OF BIOCHEMISTRY 6A *Spectroscopic Methods for Studying Macromolecular Conformation in Solution* 178

TOOLS OF BIOCHEMISTRY 6B *Determining Molecular Masses and the Number of Subunits in a Protein Molecule* 185

FOUNDATION FIGURE *Protein Structure and Function* 188

CHAPTER 7

Protein Function and Evolution 190

7.1 Binding a Specific Target: Antibody Structure and Function 192

7.2 The Adaptive Immune Response 192

7.3 The Structure of Antibodies 193

7.4 Antibody:Antigen Interactions 195

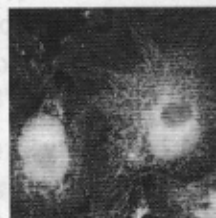

Shape and Charge Complementarity 196

Generation of Antibody Diversity 197

7.5 The Immunoglobulin Superfamily 198

7.6 The Challenge of Developing an AIDS Vaccine 198

7.7 Antibodies and Immunoconjugates as Potential Cancer Treatments 199

8	Oxygen Transport from Lungs to Tissues: Protein Conformational Change Enhances Function	200
9	The Oxygen Binding Sites in Myoglobin and Hemoglobin	201
	Analysis of Oxygen Binding by Myoglobin	202
10	The Role of Conformational Change in Oxygen Transport	204
	Cooperative Binding and Allostery	204
	Models for the Allosteric Change in Hemoglobin	206
	Changes in Hemoglobin Structure Accompanying Oxygen Binding	207
	A Closer Look at the Allosteric Change in Hemoglobin	208
11	Allosteric Effectors of Hemoglobin Promote Efficient Oxygen Delivery to Tissues	211
	Response to pH Changes: The Bohr Effect	211
	Carbon Dioxide Transport	212
	Response to Chloride Ion at the α -Globin N-Terminus	212
	2,3-Bisphosphoglycerate	212
12	Myoglobin and Hemoglobin as Examples of the Evolution of Protein Function	214
	The Structure of Eukaryotic Genes: Exons and Introns	214
13	Mechanisms of Protein Mutation	215
	Substitution of DNA Nucleotides	215
	Nucleotide Deletions or Insertions	215
	Gene Duplications and Rearrangements	216
	Evolution of the Myoglobin–Hemoglobin Family of Proteins	216
14	Hemoglobin Variants and Their Inheritance: Genetic Diseases	218
	Pathological Effects of Variant Hemoglobins	219
15	Protein Function Requiring Large Conformational Changes: Muscle Contraction	220
16	Actin and Myosin	220
	Actin	220
	Myosin	221
17	The Structure of Muscle	223
18	The Mechanism of Contraction	223
	Regulation of Contraction: The Role of Calcium	226
	TOOLS OF BIOCHEMISTRY 7A Immunological Methods	230

CHAPTER 8

Enzymes: Biological Catalysts 232

8.1	Enzymes Are Biological Catalysts	234
8.2	The Diversity of Enzyme Function	234
8.3	Chemical Reaction Rates and the Effects of Catalysts	235
	Reaction Rates, Rate Constants, and Reaction Order	235
	First-Order Reactions	235
	Second-Order Reactions	236
	Transition States and Reaction Rates	237
	Transition State Theory Applied to Enzymatic Catalysis	238
8.4	How Enzymes Act as Catalysts: Principles and Examples	240
	Models for Substrate Binding and Catalysis	240
	Mechanisms for Achieving Rate Acceleration	241
	Case Study #1: Lysozyme	243
	Case Study #2: Chymotrypsin, a Serine Protease	245
8.5	Coenzymes, Vitamins, and Essential Metals	247
	Coenzyme Function in Catalysis	247
	Metal Ions in Enzymes	249
8.6	The Kinetics of Enzymatic Catalysis	249
	Reaction Rate for a Simple Enzyme-Catalyzed Reaction: Michaelis–Menten Kinetics	250
	Interpreting K_M , k_{cat} , and k_{cat}/K_M	251
	Enzyme Mutants May Affect k_{cat} and K_M Differently	253
	Analysis of Kinetic Data: Testing the Michaelis–Menten Model	253
	Multisubstrate Reactions	254
	Random Substrate Binding	254
	Ordered Substrate Binding	254
	The Ping-Pong Mechanism	254
8.7	Enzyme Inhibition	254
	Reversible Inhibition	255
	Competitive Inhibition	255
	Uncompetitive Inhibition	257
	Mixed Inhibition	258
	Irreversible Inhibition	259
8.8	The Regulation of Enzyme Activity	260
	Substrate-Level Control	260
	Feedback Control	260

Allosteric Enzymes	261	9.4 Polysaccharides	288
Homoallostery	261	Storage Polysaccharides	289
Heteroallostery	261	Structural Polysaccharides	290
Aspartate Carbamoyltransferase: An Example of an Allosteric Enzyme	262	Cellulose	290
8.9 Covalent Modifications Used to Regulate Enzyme Activity	264	Chitin	291
Pancreatic Proteases: Activation by Irreversible Protein Backbone Cleavage	264	Glycosaminoglycans	292
8.10 Nonprotein Biocatalysts: Catalytic Nucleic Acids	265	The Proteoglycan Complex	292
TOOLS OF BIOCHEMISTRY 8A <i>How to Measure the Rates of Enzyme-Catalyzed Reactions</i>	269	Nonstructural Roles of Glycosaminoglycans	292
FOUNDATION FIGURE <i>Regulation of Enzyme Activity</i>	272	Bacterial Cell Wall Polysaccharides; Peptidoglycan	293
CHAPTER 9		9.5 Glycoproteins	294
Carbohydrates: Sugars, Saccharides, Glycans	274	N-Linked and O-Linked Glycoproteins	294
9.1 Monosaccharides	276	N-Linked Glycans	294
Aldoses and Ketoses	276	O-Linked Glycans	294
Enantiomers	277	Blood Group Antigens	295
Alternative Designations for Enantiomers: D-L and R-S	278	Erythropoietin: A Glycoprotein with Both O- and N-Linked Oligosaccharides	296
Monosaccharide Enantiomers in Nature	278	Influenza Neuraminidase, a Target for Antiviral Drugs	296
Diastereomers	278	TOOLS OF BIOCHEMISTRY 9A <i>The Emerging Field of Glycomics</i>	299
Tetrose Diastereomers	278		
Pentose Diastereomers	279	 	
Hexose Diastereomers	279	CHAPTER 10	
Aldose Ring Structures	279	Lipids, Membranes, and Cellular Transport	300
Pentose Rings	279	10.1 The Molecular Structure and Behavior of Lipids	302
Hexose Rings	282	Fatty Acids	302
Sugars with More Than Six Carbons	283	Triacylglycerols: Fats	304
9.2 Derivatives of the Monosaccharides	283	Soaps and Detergents	305
Phosphate Esters	283	Waxes	305
Lactones and Acids	284	10.2 The Lipid Constituents of Biological Membranes	305
Alditols	284	Glycerophospholipids	306
Amino Sugars	284	Sphingolipids and Glycosphingolipids	307
Glycosides	284	Glycoglycerolipids	308
9.3 Oligosaccharides	285	Cholesterol	308
Oligosaccharide Structures	285	10.3 The Structure and Properties of Membranes and Membrane Proteins	309
Distinguishing Features of Different Disaccharides	285	Motion in Membranes	310
Writing the Structure of Disaccharides	286	Motion in Synthetic Membranes	310
Stability and Formation of the Glycosidic Bond	287	Motion in Biological Membranes	311
		The Asymmetry of Membranes	311
		Characteristics of Membrane Proteins	312
		Insertion of Proteins into Membranes	313
		Evolution of the Fluid Mosaic Model of Membrane Structure	315

- 0.4 **Transport Across Membranes 317**
 - The Thermodynamics of Transport 317
 - Nonmediated Transport: Diffusion 318
 - Facilitated Transport: Accelerated Diffusion 319
 - Carriers 319
 - Permeases 320
 - Pore-Facilitated Transport 321
 - Ion Selectivity and Gating 322
 - Active Transport: Transport Against a Concentration Gradient 324
- 0.5 **Ion Pumps: Direct Coupling of ATP Hydrolysis to Transport 324**
- 0.6 **Ion Transporters and Disease 326**
- 0.7 **Cotransport Systems 327**
- 0.8 **Excitable Membranes, Action Potentials, and Neurotransmission 328**
 - The Resting Potential 328
 - The Action Potential 329
 - Toxins and Neurotransmission 330

CHAPTER 11

Chemical Logic of Metabolism 334

- 1.1 **A First Look at Metabolism 336**
- 1.2 **Freeways on the Metabolic Road Map 337**
 - Central Pathways of Energy Metabolism 337
 - Distinct Pathways for Biosynthesis and Degradation 340
- 1.3 **Biochemical Reaction Types 341**
 - Nucleophilic Substitutions 341
 - Nucleophilic Additions 342
 - Carbonyl Condensations 342
 - Eliminations 344
 - Oxidations and Reductions 344
- 1.4 **Bioenergetics of Metabolic Pathways 344**
 - Oxidation as a Metabolic Energy Source 345
 - Biological Oxidations: Energy Release in Small Increments 345
 - Energy Yields, Respiratory Quotients, and Reducing Equivalents 345
 - ATP as a Free Energy Currency 346
 - Metabolite Concentrations and Solvent Capacity 348

- Thermodynamic Properties of ATP 349
- The Important Differences Between ΔG and ΔG° 350
- Kinetic Control of Substrate Cycles 350
- Other High-Energy Phosphate Compounds 351
- Other High-Energy Nucleotides 352
- Adenylate Energy Charge 352

- 11.5 **Major Metabolic Control Mechanisms 352**
 - Control of Enzyme Levels 352
 - Control of Enzyme Activity 353
 - Compartmentation 353
 - Hormonal Regulation 355
 - Distributive Control of Metabolism 355
- 11.6 **Experimental Analysis of Metabolism 356**
 - Goals of the Study of Metabolism 356
 - Levels of Organization at Which Metabolism is Studied 356
 - Whole Organisms 356
 - Isolated or Perfused Organs 356
 - Whole Cells 356
 - Cell-Free Systems 357
 - Purified Components 357
 - Systems Level 357
 - Metabolic Probes 357

TOOLS OF BIOCHEMISTRY 11A Metabolomics 361

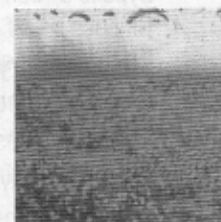

TOOLS OF BIOCHEMISTRY 11B Radioactive and Stable Isotopes 364

FOUNDATION FIGURE Enzyme Kinetics and Drug Action 366

CHAPTER 12

Carbohydrate Metabolism: Glycolysis, Gluconeogenesis, Glycogen Metabolism, and the Pentose Phosphate Pathway 368

- 12.1 **An Overview of Glycolysis 371**
 - Relation of Glycolysis to Other Pathways 371
 - Anaerobic and Aerobic Glycolysis 371
 - Chemical Strategy of Glycolysis 373
- 12.2 **Reactions of Glycolysis 373**
 - Reactions 1–5: The Energy Investment Phase 373
 - Reaction 1: The First ATP Investment 373

- Reaction 2: Isomerization of Glucose-6-Phosphate 375
- Reaction 3: The Second Investment of ATP 375
- Reaction 4: Cleavage to Two Triose Phosphates 375
- Reaction 5: Isomerization of Dihydroxyacetone Phosphate 376
- Reactions 6–10: The Energy Generation Phase 377**
- Reaction 6: Generation of the First Energy-Rich Compound 377
- Reaction 7: The First Substrate-Level Phosphorylation 378
- Reaction 8: Preparing for Synthesis of the Next High-Energy Compound 378
- Reaction 9: Synthesis of the Second High-Energy Compound 379
- Reaction 10: The Second Substrate-Level Phosphorylation 379
- 12.3 Metabolic Fates of Pyruvate 380**
 - Lactate Metabolism 380
 - Isozymes of Lactate Dehydrogenase 382
 - Ethanol Metabolism 382
- 12.4 Energy and Electron Balance Sheets 383**
- 12.5 Gluconeogenesis 384**
 - Physiological Need for Glucose Synthesis in Animals 384
 - Enzymatic Relationship of Gluconeogenesis to Glycolysis 385
 - Bypass 1: Conversion of Pyruvate to Phosphoenolpyruvate 385
 - Bypass 2: Conversion of Fructose-1,6-bisphosphate to Fructose-6-phosphate 386
 - Bypass 3: Conversion of Glucose-6-phosphate to Glucose 386
 - Stoichiometry and Energy Balance of Gluconeogenesis 387
 - Gluconeogenesis 387
 - Reversal of Glycolysis 387
 - Substrates for Gluconeogenesis 387
 - Lactate 387
 - Amino Acids 388
 - Ethanol Consumption and Gluconeogenesis 388
- 12.6 Coordinated Regulation of Glycolysis and Gluconeogenesis 388**
 - The Pasteur Effect 388
 - Reciprocal Regulation of Glycolysis and Gluconeogenesis 389
 - Regulation at the Phosphofructokinase/Fructose-1,6-Bisphosphatase Substrate Cycle 390
 - Fructose-2,6-bisphosphate and the Control of Glycolysis and Gluconeogenesis 390
 - Regulation at the Pyruvate Kinase/Pyruvate Carboxylase + PEPCK Substrate Cycle 393
 - Regulation at the Hexokinase/Glucose-6-Phosphatase Substrate Cycle 393
- 12.7 Entry of Other Sugars into the Glycolytic Pathway 394**
 - Monosaccharide Metabolism 394
 - Galactose Utilization 394
 - Fructose Utilization 394
 - Disaccharide Metabolism 394
 - Glycerol Metabolism 395
 - Polysaccharide Metabolism 395
 - Hydrolytic and Phosphorolytic Cleavages 395
 - Starch and Glycogen Digestion 396
- 12.8 Glycogen Metabolism in Muscle and Liver 396**
 - Glycogen Breakdown 396
 - Glycogen Biosynthesis 397
 - Biosynthesis of UDP-Glucose 397
 - The Glycogen Synthase Reaction 398
 - Formation of Branches 399
- 12.9 Coordinated Regulation of Glycogen Metabolism 399**
 - Structure of Glycogen Phosphorylase 399
 - Control of Phosphorylase Activity 400
 - Proteins in the Glycogenolytic Cascade 400
 - Cyclic AMP-Dependent Protein Kinase 400
 - Phosphorylase *b* Kinase 401
 - Calmodulin 401
 - Nonhormonal Control of Glycogenolysis 402
 - Control of Glycogen Synthase Activity 402
 - Congenital Defects of Glycogen Metabolism in Humans 403
- 12.10 A Biosynthetic Pathway That Oxidizes Glucose: The Pentose Phosphate Pathway 404**
 - The Oxidative Phase: Generating Reducing Power as NADPH 405
 - The Nonoxidative Phase: Alternative Fates of Pentose Phosphates 405
 - Production of Six-Carbon and Three-Carbon Sugar Phosphates 405
 - Tailoring the Pentose Phosphate Pathway to Specific Needs 407
 - Regulation of the Pentose Phosphate Pathway 408
 - Human Genetic Disorders Involving Pentose Phosphate Pathway Enzymes 409

CHAPTER 13

The Citric Acid Cycle 414

- 3.1 Overview of Pyruvate Oxidation and the Citric Acid Cycle 417**
 - The Three Stages of Respiration 417
 - Chemical Strategy of the Citric Acid Cycle 418
 - Discovery of the Citric Acid Cycle 420
- 3.2 Pyruvate Oxidation: A Major Entry Route for Carbon into the Citric Acid Cycle 420**
 - Overview of Pyruvate Oxidation and the Pyruvate Dehydrogenase Complex 420
 - Coenzymes Involved in Pyruvate Oxidation and the Citric Acid Cycle 421
 - Thiamine Pyrophosphate (TPP) 422
 - Lipoic Acid (Lipoamide) 422
 - Nicotinamide Adenine Dinucleotide (NAD⁺) 422
 - Flavin Adenine Dinucleotide (FAD) 423
 - Coenzyme A: Activation of Acyl Groups 423
 - Action of the Pyruvate Dehydrogenase Complex 424
- 3.3 The Citric Acid Cycle 427**
 - Step 1: Introduction of Two Carbon Atoms as Acetyl-CoA 427
 - Step 2: Isomerization of Citrate 428
 - Step 3: Conservation of the Energy Released by an Oxidative Decarboxylation in the Reduced Electron Carrier NADH 429
 - Step 4: Conservation of Energy in NADH by a Second Oxidative Decarboxylation 429
 - Step 5: A Substrate-Level Phosphorylation 430
 - Step 6: A Flavin-Dependent Dehydrogenation 430
 - Step 7: Hydration of a Carbon–Carbon Double Bond 431
 - Step 8: An Oxidation that Regenerates Oxaloacetate 431
- 3.4 Stoichiometry and Energetics of the Citric Acid Cycle 431**
- 3.5 Regulation of Pyruvate Dehydrogenase and the Citric Acid Cycle 432**
 - Control of Pyruvate Oxidation 432
 - Control of the Citric Acid Cycle 434
- 3.6 Organization and Evolution of the Citric Acid Cycle 434**
- 3.7 Citric Acid Cycle Malfunction as a Cause of Human Disease 435**
- 3.8 Anaplerotic Sequences: The Need to Replace Cycle Intermediates 435**

Reactions that Replenish Oxaloacetate 436

The Malic Enzyme 436

Reactions Involving Amino Acids 436

13.9 The Glyoxylate Cycle: An Anabolic Variant of the Citric Acid Cycle 437

TOOLS OF BIOCHEMISTRY 13A *Detecting and Analyzing Protein–Protein Interactions* 442

CHAPTER 14

Electron Transport, Oxidative Phosphorylation, and Oxygen Metabolism 444

- 14.1 The Mitochondrion: Scene of the Action 447**
- 14.2 Free Energy Changes in Biological Oxidations 447**
- 14.3 Electron Transport 450**
 - Electron Carriers in the Respiratory Chain 450
 - Flavoproteins 450
 - Iron–Sulfur Proteins 450
 - Coenzyme Q 451
 - Cytochromes 451
 - Respiratory Complexes 452
 - NADH–Coenzyme Q Reductase (Complex I) 453
 - Succinate–Coenzyme Q Reductase (Complex II) 454
 - Coenzyme Q: Cytochrome *c* Oxidoreductase (Complex III) 455
 - Cytochrome *c* Oxidase (Complex IV) 457
- 14.4 Oxidative Phosphorylation 457**
 - The P/O Ratio: Energetics of Oxidative Phosphorylation 457
 - Oxidative Reactions That Drive ATP Synthesis 458
 - Mechanism of Oxidative Phosphorylation: Chemiosmotic Coupling 459
 - A Closer Look at Chemiosmotic Coupling: The Experimental Evidence 460
 - Membranes Can Establish Proton Gradients 460
 - An Intact Inner Membrane Is Required for Oxidative Phosphorylation 461
 - Key Electron Transport Proteins Span the Inner Membrane 461
 - Uncouplers Act by Dissipating the Proton Gradient 461
 - Generation of a Proton Gradient Permits ATP Synthesis Without Electron Transport 461
 - Complex V: The Enzyme System for ATP Synthesis 461

Discovery and Reconstitution of ATP Synthase 461
 Structure of the Mitochondrial F₁ ATP Synthase
 Complex 463
 Mechanism of ATP Synthesis 463

14.5 Respiratory States and Respiratory Control 466

14.6 Mitochondrial Transport Systems 469

Transport of Substrates and Products into and out of
 Mitochondria 469
 Shuttling Cytoplasmic Reducing Equivalents into
 Mitochondria 470

14.7 Energy Yields from Oxidative Metabolism 471

14.8 The Mitochondrial Genome, Evolution, and Disease 471

14.9 Oxygen as a Substrate for Other Metabolic Reactions 473

Oxidases and Oxygenases 473

Cytochrome P450 Monooxygenase 473

Reactive Oxygen Species, Antioxidant Defenses, and
 Human Disease 473

Formation of Reactive Oxygen Species 473

Dealing with Oxidative Stress 474

FOUNDATION FIGURE *Intermediary Metabolism* 478

CHAPTER 15

Photosynthesis 480

15.1 The Basic Processes of Photosynthesis 484

15.2 The Chloroplast 485

15.3 The Light Reactions 486

Absorption of Light: The
 Light-Harvesting System 486

The Energy of Light 486

The Light-Absorbing Pigments 486

The Light-Gathering Structures 487

**Photochemistry in Plants and Algae: Two Photosystems
 in Series** 489

Photosystem II: The Splitting of Water 491

Photosystem I: Production of NADPH 493

Summation of the Two Systems: The Overall Reaction and ATP
 Generation 494

**An Alternative Light Reaction Mechanism: Cyclic Electron
 Flow** 496

**Reaction Center Complexes in Photosynthetic
 Bacteria** 496

Evolution of Photosynthesis 496

15.4 The Dark Reactions: The Calvin Cycle 497

Stage I: Carbon Dioxide Fixation and Sugar
 Production 498

Incorporation of CO₂ into a Three-Carbon Sugar 498

Formation of Hexose Sugars 499

Stage II: Regeneration of the Acceptor 499

15.5 A Summary of the Light and Dark Reactions in Two- System Photosynthesis 500

The Overall Reaction and the Efficiency of
 Photosynthesis 500

Regulation of Photosynthesis 500

15.6 Photorespiration and the C₄ Cycle 501

CHAPTER 16

Lipid Metabolism 506

**Part I: Bioenergetic Aspects of
 Lipid Metabolism** 509

16.1 Utilization and Transport of Fat and Cholesterol 509

Fats as Energy Reserves 509

Fat Digestion and Absorption 509

Transport of Fat to Tissues: Lipoproteins 511

Classification and Functions of Lipoproteins 511

Transport and Utilization of Lipoproteins 512

Cholesterol Transport and Utilization in Animals 513

The LDL Receptor and Cholesterol Homeostasis 514

Cholesterol, LDL, and Atherosclerosis 516

Mobilization of Stored Fat for Energy Generation 517

16.2 Fatty Acid Oxidation 517

Early Experiments 517

**Fatty Acid Activation and Transport into
 Mitochondria** 519

The β -Oxidation Pathway 520

Reaction 1: The Initial Dehydrogenation 521

Reactions 2 and 3: Hydration and Dehydrogenation 521

Reaction 4: Thiolitic Cleavage 521

**Mitochondrial β -Oxidation Involves Multiple
 Isozymes** 522

Energy Yield from Fatty Acid Oxidation 522

- Oxidation of Unsaturated Fatty Acids 522
- Oxidation of Fatty Acids with Odd-Numbered Carbon Chains 523
- Control of Fatty Acid Oxidation 524
- Ketogenesis 524

6.3 Fatty Acid Biosynthesis 525

- Relationship of Fatty Acid Synthesis to Carbohydrate Metabolism 525
- Early Studies of Fatty Acid Synthesis 526
- Biosynthesis of Palmitate from Acetyl-CoA 526
- Synthesis of Malonyl-CoA 526
- Malonyl-CoA to Palmitate 527
- Multifunctional Proteins in Fatty Acid Synthesis 529
- Transport of Acetyl Units and Reducing Equivalents into the Cytosol 530
- Elongation of Fatty Acid Chains 530
- Fatty Acid Desaturation 530
- Control of Fatty Acid Synthesis 532

6.4 Biosynthesis of Triacylglycerols 533

Part II: Metabolism of Membrane Lipids, Steroids, and Other Complex Lipids 534

6.5 Glycerophospholipids 534

6.6 Sphingolipids 535

6.7 Steroid Metabolism 536

- Steroids: Some Structural Considerations 536
- Biosynthesis of Cholesterol 537
- Early Studies of Cholesterol Biosynthesis 537
- Stage 1: Formation of Mevalonate 537
- Stage 2: Synthesis of Squalene from Mevalonate 538
- Stage 3: Cyclization of Squalene to Lanosterol and Its Conversion to Cholesterol 539
- Control of Cholesterol Biosynthesis 539
- Cholesterol Derivatives: Bile Acids, Steroid Hormones, and Vitamin D 541
- Bile Acids 541
- Steroid Hormones 541
- Vitamin D 541
- Lipid-Soluble Vitamins 542
- Vitamin A 542
- Vitamin E 543
- Vitamin K 543

6.8 Eicosanoids: Prostaglandins, Thromboxanes, and Leukotrienes 544

CHAPTER 17

Interorgan and Intracellular Coordination of Energy Metabolism in Vertebrates 548

17.1 Interdependence of the Major Organs in Vertebrate Fuel Metabolism 550

Fuel Inputs and Outputs 550

- Metabolic Division of Labor Among the Major Organs 550
- Brain 550
- Muscle 552
- Heart 552
- Adipose Tissue 552
- Liver 552
- Blood 552

17.2 Hormonal Regulation of Fuel Metabolism 553

Actions of the Major Hormones 553

- Insulin 554
- Glucagon 554
- Epinephrine 555
- Coordination of Energy Homeostasis 555
- AMP-Activated Protein Kinase (AMPK) 555
- Mammalian Target of Rapamycin (mTOR) 556
- Sirtuins 557
- Endocrine Regulation of Energy Homeostasis 558

17.3 Responses to Metabolic Stress: Starvation, Diabetes 559

- Starvation 560
- Diabetes 561

CHAPTER 18

Amino Acid and Nitrogen Metabolism 564

18.1 Utilization of Inorganic Nitrogen: The Nitrogen Cycle 567

- Biological Nitrogen Fixation 567
- Nitrate Utilization 569

18.2 Utilization of Ammonia: Biogenesis of Organic Nitrogen 569

- Glutamate Dehydrogenase: Reductive Amination of α -Ketoglutarate 569
- Glutamine Synthetase: Generation of Biologically Active Amide Nitrogen 569

- Carbamoyl Phosphate Synthetase: Generation of an Intermediate for Arginine and Pyrimidine Synthesis 570
- 18.3 The Nitrogen Economy and Protein Turnover 570**
 Metabolic Consequences of the Absence of Nitrogen Storage Compounds 570
 Protein Turnover 570
 Intracellular Proteases and Sites of Turnover 571
 Chemical Signals for Turnover—Ubiquitination 571
- 18.4 Coenzymes Involved in Nitrogen Metabolism 572**
 Pyridoxal Phosphate 572
 Folic Acid Coenzymes and One-Carbon Metabolism 573
 Discovery and Chemistry of Folic Acid 573
 Conversion of Folic Acid to Tetrahydrofolate 574
 Tetrahydrofolate in the Metabolism of One-Carbon Units 575
 Folic Acid in the Prevention of Heart Disease and Birth Defects 577
 B₁₂ Coenzymes 577
 B₁₂ Coenzymes and Pernicious Anemia 577
- 18.5 Amino Acid Degradation and Metabolism of Nitrogenous End Products 578**
 Transamination Reactions 578
 Detoxification and Excretion of Ammonia 578
 Transport of Ammonia to the Liver 579
 The Krebs–Henseleit Urea Cycle 579
- 18.6 Pathways of Amino Acid Degradation 581**
 Pyruvate Family of Glucogenic Amino Acids 581
 Oxaloacetate Family of Glucogenic Amino Acids 583
 α -Ketoglutarate Family of Glucogenic Amino Acids 583
 Succinyl-CoA Family of Glucogenic Amino Acids 583
 Acetoacetate/Acetyl-CoA Family of Ketogenic Amino Acids 585
 Phenylalanine and Tyrosine Degradation 585
- 18.7 Amino Acid Biosynthesis 587**
 Biosynthetic Capacities of Organisms 587
 Amino Acid Biosynthetic Pathways 587
 Synthesis of Glutamate, Aspartate, Alanine, Glutamine, and Asparagine 588
 Synthesis of Serine and Glycine from 3-Phosphoglycerate 588
 Synthesis of Valine, Leucine, and Isoleucine from Pyruvate 588
- 18.8 Amino Acids as Biosynthetic Precursors 589**
 S-Adenosylmethionine and Biological Methylation 589
 Precursor Functions of Glutamate 591
- Arginine Is the Precursor for Nitric Oxide and Creatine Phosphate 592
 Tryptophan and Tyrosine Are Precursors of Neurotransmitters and Biological Regulators 592
- ## CHAPTER 19
- ### Nucleotide Metabolism 598
- 19.1 Outlines of Pathways in Nucleotide Metabolism 600**
 Biosynthetic Routes: De Novo and Salvage Pathways 600
 Nucleic Acid Degradation and the Importance of Nucleotide Salvage 601
 PRPP, a Central Metabolite in De Novo and Salvage Pathways 601
- 19.2 De Novo Biosynthesis of Purine Ribonucleotides 602**
 Synthesis of the Purine Ring 602
 Enzyme Organization in the Purine Biosynthetic Pathway 604
 Synthesis of ATP and GTP from Inosine Monophosphate 604
- 19.3 Purine Catabolism and Its Medical Significance 605**
 Uric Acid, a Primary End Product 605
 Medical Abnormalities of Purine Catabolism 606
 Gout 606
 Lesch-Nyhan Syndrome 607
 Severe Combined Immunodeficiency Disease 607
- 19.4 Pyrimidine Ribonucleotide Metabolism 608**
 De Novo Biosynthesis of UTP and CTP 608
 Glutamine-dependent Amidotransferases 608
 Multifunctional Enzymes in Eukaryotic Pyrimidine Metabolism 610
- 19.5 Deoxyribonucleotide Metabolism 610**
 Reduction of Ribonucleotides to Deoxyribonucleotides 611
 RNR Structure and Mechanism 611
 Source of Electrons for Ribonucleotide Reduction 613
 Regulation of Ribonucleotide Reductase Activity 613
 Regulation of dNTP Pools by Selective dNTP Degradation 614
 Biosynthesis of Thymine Deoxyribonucleotides 615
 Salvage Routes to Deoxyribonucleotides 616

Thymidylate Synthase: A Target Enzyme for
Chemotherapy 617

6 Virus-Directed Alterations of Nucleotide Metabolism 619

7 Other Medically Useful Analogs 621

CHAPTER 20

Mechanisms of Signal Transduction 624

1 An Overview of Hormone Action 626

Chemical Nature of Hormones and Other Signaling
Agents 627

Hierarchical Nature of Hormonal Control 627

Hormone Biosynthesis 628

2 Modular Nature of Signal Transduction Systems: G Protein-Coupled Signaling 628

Receptors 628

Receptors as Defined by Interactions with Drugs 628

Receptors and Adenylate Cyclase as Distinct Components of
Signal Transduction Systems 628

Structural Analysis of G Protein-coupled Receptors 629

Transducers: G Proteins 630

Actions of G Proteins 630

Structure of G Proteins 631

Consequences of Blocking GTPase 631

The Versatility of G Proteins 631

Interaction of GPCRs with G Proteins 632

G Proteins in the Visual Process 632

Effectors 632

Second Messengers 633

Cyclic AMP 633

Cyclic GMP and Nitric Oxide 633

Phosphoinositides 634

3 Receptor Tyrosine Kinases and Insulin Signaling 636

4 Hormones and Gene Expression: Nuclear Receptors 639

5 Signal Transduction, Growth Control, and Cancer 641

Viral and Cellular Oncogenes 641

Oncogenes in Human Tumors 641

The Cancer Genome Mutational Landscape 643

6 Neurotransmission 644

The Cholinergic Synapse 644

Fast and Slow Synaptic Transmission 645

Actions of Specific Neurotransmitters 646

Drugs That Act in the Synaptic Cleft 647

Peptide Neurotransmitters and Neurohormones 647

FOUNDATION FIGURE *Cell Signaling and Protein
Regulation* 650

CHAPTER 21

Genes, Genomes, and Chromosomes 652

21.1 Bacterial and Viral Genomes 654

Viral Genomes 654

Bacterial Genomes—The Nucleoid 654

21.2 Eukaryotic Genomes 655

Genome Sizes 655

Repetitive Sequences 656

Satellite DNA 657

Duplications of Functional Genes 657

Alu Elements 658

Introns 658

Gene Families 658

Multiple Variants of a Gene 658

Pseudogenes 659

The ENCODE Project and the Concept of “Junk DNA” 659

21.3 Physical Organization of Eukaryotic Genes: Chromosomes and Chromatin 659

The Nucleus 659

Chromatin 660

Histones and Nonhistone Chromosomal Proteins 660

The Nucleosome 661

Higher-order Chromatin Structure in the Nucleus 663

21.4 Nucleotide Sequence Analysis of Genomes 663

Restriction and Modification 663

Properties of Restriction and Modification Enzymes 664

Determining Genome Nucleotide Sequences 666

Mapping Large Genomes 666

Generating Physical Maps 667

The Principle of Southern Analysis 668

Southern Transfer and DNA Fingerprinting 668

Locating Genes on the Human Genome 669

Sequence Analysis Using Artificial Chromosomes 670

Size of the Human Genome 670

TOOLS OF BIOCHEMISTRY 21A *Polymerase Chain
Reaction* 674

CHAPTER **22****DNA Replication 676**

- 22.1 Early Insights into DNA Replication 678**
- 22.2 DNA Polymerases: Enzymes Catalyzing Polynucleotide Chain Elongation 679**
 - Structure and Activities of DNA Polymerase I 679
 - DNA Substrates for the Polymerase Reaction 680
 - Multiple Activities in a Single Polypeptide Chain 680
 - Structure of DNA Polymerase I 681
 - Discovery of Additional DNA Polymerases 681
 - Structure and Mechanism of DNA Polymerases 682
- 22.3 Other Proteins at the Replication Fork 683**
 - Genetic Maps of *E. coli* and Bacteriophage T4 683
 - Replication Proteins in Addition to DNA Polymerase 683
 - Discontinuous DNA Synthesis 684
 - RNA Primers 686
 - Proteins at the Replication Fork 686
 - The DNA Polymerase III Holoenzyme 686
 - Sliding Clamp 687
 - Clamp Loading Complex 687
 - Single-stranded DNA-binding Proteins: Maintaining Optimal Template Conformation 688
 - Helicases: Unwinding DNA Ahead of the Fork 688
 - Topoisomerases: Relieving Torsional Stress 689
 - Actions of Type I and Type II Topoisomerases 689
 - The Four Topoisomerases of *E. coli* 691
 - A Model of the Replisome 692
- 22.4 Eukaryotic DNA Replication 692**
 - DNA Polymerases 692
 - Other Eukaryotic Replication Proteins 693
 - Replication of Chromatin 694
- 22.5 Initiation of DNA Replication 694**
 - Initiation of *E. coli* DNA Replication at *ori*^c 694
 - Initiation of Eukaryotic Replication 695
- 22.6 Replication of Linear Genomes 696**
 - Linear Virus Genome Replication 696
 - Telomerase 697
- 22.7 Fidelity of DNA Replication 698**
 - 3' Exonucleolytic Proofreading 698

Polymerase Insertion Specificity 698
 DNA Precursor Metabolism and Genomic Stability 700
 Ribonucleotide Incorporation and Genomic Stability 700

- 22.8 RNA Viruses: The Replication of RNA Genomes 700**
 - RNA-dependent RNA Replicases 700
 - Replication of Retroviral Genomes 701

CHAPTER **23****DNA Repair, Recombination, and Rearrangement 704**

- 23.1 DNA Repair 706**
 - Types and Consequences of DNA Damage 706
 - Direct Repair of Damaged DNA Bases: Photoreactivation and Alkyltransferases 708
 - Photoreactivation 708
 - O⁶-Alkylguanine Alkyltransferase 708
 - Nucleotide Excision Repair: Excinucleases 709
 - Base Excision Repair: DNA N-Glycosylases 710
 - Replacement of Uracil in DNA by BER 710
 - Repair of Oxidative Damage to DNA 711
 - Mismatch Repair 712
 - Double-strand Break Repair 714
 - Daughter-strand Gap Repair 714
 - Translesion Synthesis and the DNA Damage Response 716
- 23.2 Recombination 716**
 - Site-specific Recombination 716
 - Homologous Recombination 717
 - Breaking and Joining of Chromosomes 717
 - Models for Recombination 717
 - Proteins Involved in Homologous Recombination 718
- 23.3 Gene Rearrangements 720**
 - Immunoglobulin Synthesis: Generating Antibody Diversity 720
 - Transposable Genetic Elements 722
 - Retroviruses 723
 - Gene Amplification 723
 - FOUNDATION FIGURE Antibody Diversity and Use as Therapeutics 728**

CHAPTER 24

Transcription and Post-transcriptional Processing 730

- 24.1 **DNA as the Template for RNA Synthesis 732**
 - The Predicted Existence of Messenger RNA 732
 - T2 Bacteriophage and the Demonstration of Messenger RNA 733
 - RNA Dynamics in Uninfected Cells 734
- 24.2 **Enzymology of RNA Synthesis: RNA Polymerase 735**
 - Biological Role of RNA Polymerase 735
 - Structure of RNA Polymerase 736
- 24.3 **Mechanism of Transcription in Bacteria 737**
 - Initiation of Transcription: Interactions with Promoters 737
 - Initiation and Elongation: Incorporation of Ribonucleotides 739
 - Punctuation of Transcription: Termination 740
 - Factor-Independent Termination 740
 - Factor-Dependent Termination 741
- 24.4 **Transcription in Eukaryotic Cells 741**
 - RNA Polymerase I: Transcription of the Major Ribosomal RNA Genes 742
 - RNA Polymerase III: Transcription of Small RNA Genes 742
 - RNA Polymerase II: Transcription of Structural Genes 742
 - Chromatin Structure and Transcription 745
 - Transcriptional Elongation 745
 - Termination of Transcription 746
- 24.5 **Post-transcriptional Processing 746**
 - Bacterial mRNA Turnover 746
 - Post-transcriptional Processing in the Synthesis of Bacterial rRNAs and tRNAs 747

- rRNA Processing 747
- tRNA Processing 747
- Processing of Eukaryotic mRNA 748
 - Capping 748
 - Splicing 748
 - Alternative Splicing 750

TOOLS OF BIOCHEMISTRY 24A DNA Microarrays 753

TOOLS OF BIOCHEMISTRY 24B Chromatin Immunoprecipitation 754

CHAPTER 25

Information Decoding: Translation and Post-translational Protein Processing 756

- 25.1 **An Overview of Translation 758**
- 25.2 **The Genetic Code 759**
 - How the Code Was Deciphered 759
 - Features of the Code 760
 - Deviations from the Genetic Code 761
 - The Wobble Hypothesis 761
 - tRNA Abundance and Codon Bias 762
 - Punctuation: Stopping and Starting 762
- 25.3 **The Major Participants in Translation: mRNA, tRNA, and Ribosomes 762**
 - Messenger RNA 762
 - Transfer RNA 763
 - Aminoacyl-tRNA Synthetases: The First Step in Protein Synthesis 765
 - The Ribosome and Its Associated Factors 767
 - Soluble Protein Factors in Translation 767
 - Components of Ribosomes 767
 - Ribosomal RNA Structure 769
 - Internal Structure of the Ribosome 770
- 25.4 **Mechanism of Translation 771**
 - Initiation 771
 - Elongation 772
 - Termination 774
 - Suppression of Nonsense Mutations 775
- 25.5 **Inhibition of Translation by Antibiotics 776**
- 25.6 **Translation in Eukaryotes 777**
- 25.7 **Rate of Translation; Polyribosomes 778**
- 25.8 **The Final Stages in Protein Synthesis: Folding and Covalent Modification 778**
 - Chain Folding 779
 - Covalent Modification 779
- 25.9 **Protein Targeting in Eukaryotes 780**
 - Proteins Synthesized in the Cytoplasm 780
 - Proteins Synthesized on the Rough Endoplasmic Reticulum 782
 - Role of the Golgi Complex 782

CHAPTER 26

Regulation of Gene Expression 786**26.1 Regulation of Transcription in Bacteria 788****The Lactose Operon—Earliest Insights into Transcriptional Regulation 788**

Isolation and Properties of the Lactose Repressor 790

The Repressor Binding Site 790

Regulation of the *lac* Operon by Glucose: A Positive Control System 792

The CRP–DNA Complex 792

Some Other Bacterial Transcriptional Regulatory Systems: Variations on a Theme 793Bacteriophage λ : Multiple Operators, Dual Repressors, Interspersed Promoters and Operators 793

The SOS Regulon: Activation of Multiple Operons by a Common Set of Environmental Signals 795

Biosynthetic Operons: Ligand-Activated Repressors and Attenuation 796

Applicability of the Operon Model—Variations on a Theme 798

26.2 Transcriptional Regulation in Eukaryotes 798

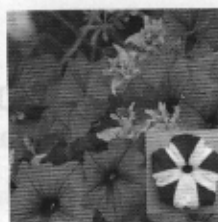

Chromatin and Transcription 798

Transcriptional Control Sites and Genes 799

Nucleosome Remodeling Complexes 800

Transcription Initiation 801

Regulation of the Elongation Cycle by RNA Polymerase Phosphorylation 802

**26.3 DNA Methylation, Gene Silencing, and Epigenetics 802**

DNA Methylation in Eukaryotes 802

DNA Methylation and Gene Silencing 803

Genomic Distribution of Methylated Cytosines 804

Other Proposed Epigenetic Phenomena 804

5-Hydroxymethylcytosine 804

Chromatin Histone Modifications 804

26.4 Regulation of Translation 804

Regulation of Bacterial Translation 805

Regulation of Eukaryotic Translation 805

Phosphorylation of Eukaryotic Initiation Factors 806

Long Noncoding RNAs 806

26.5 RNA Interference 806

Micro RNAs 807

Small Interfering RNAs 807

26.6 Riboswitches 808**26.7 RNA Editing 808****FOUNDATION FIGURE Information Flow in Biological Systems 812**
