UNIT 1 The Foundations of Microbiology

CHAPTER 1

Microorganisms and Microbiology 1

microbiologynow
Microbial Life Is Everywhere 1

I Introduction and Major Themes of Microbiology 2

- 1.1 What Is Microbiology About and Why Is It Important? 2
- 1.2 Structure and Activities of Microbial Cells 2
- 1.3 Evolution and Diversity of Microbial Cells 5
- 1.4 Microorganisms and Their Environments 6
- 1.5 The Impact of Microorganisms on Humans 8

II Microbiology in Historical Context 13

- 1.6 The Discovery of Microorganisms 13
- 1.7 Pasteur and Spontaneous Generation 13
- 1.8 Koch, Infectious Disease, and Pure Cultures 16

EXPLORE THE MICROBIAL WORLD
The Black Death Decoded 19

- 1.9 The Rise of Microbial Diversity 20
- 1.10 Modern Microbiology and Genomics 22

CHAPTER 2

Microbial Cell Structure and Function 25

microbiologynow
Archaeal Tortoise and Hare 25

I Microscopy 26

- 2.1 Discovering Cell Structure: Light Microscopy 26
- 2.2 Improving Contrast in Light Microscopy 27
- 2.3 Imaging Cells in Three Dimensions 29
- 2.4 Probing Cell Structure: Electron Microscopy 31

II Cells of *Bacteria* and *Archaea* 32

- 2.5 Cell Morphology 32
- 2.6 Cell Size and the Significance of Being Small 33

III The Cytoplasmic Membrane and Transport 35

- 2.7 Membrane Structure 35
- 2.8 Membrane Function 36
- 2.9 Nutrient Transport 39

IV Cell Walls of *Bacteria* and *Archaea* 41

- 2.10 Peptidoglycan 41
- 2.11 LPS: The Outer Membrane 44
- 2.12 Archaeal Cell Walls 46

V Other Cell Surface Structures and Inclusions 48

- 2.13 Cell Surface Structures 48
- 2.14 Cell Inclusions 49
- 2.15 Gas Vesicles 51
- 2.16 Endospores 52

VI Microbial Locomotion 56

- 2.17 Flagella and Swimming Motility 56
- 2.18 Gliding Motility 59
- 2.19 Chemotaxis and Other Taxes 61

VII Eukaryotic Microbial Cells 64

- 2.20 The Nucleus and Cell Division 64
- 2.21 Mitochondria, Hydrogenosomes, and Chloroplasts 66
- 2.22 Other Major Eukaryotic Cell Structures 67

CHAPTER 3

Microbial Metabolism 73

microbiologynow
A Metabolic Surprise 73

I Laboratory Culture of Microorganisms 74

- 3.1 Cell Chemistry and Nutrition 74
- 3.2 Media and Laboratory Culture 76

II Energetics, Enzymes, and Redox 79

- 3.3 Energy Classes of Microorganisms 79
- 3.4 Bioenergetics 80
- 3.5 Catalysis and Enzymes 81
- 3.6 Electron Donors and Acceptors 82
- 3.7 Energy-Rich Compounds 84

III Fermentation and Respiration 86

- 3.8 Glycolysis 86
- 3.9 Fermentative Diversity and the Respiratory Option 88

- 3.10 Respiration: Electron Carriers 89
- 3.11 Respiration: The Proton Motive Force 91
- 3.12 Respiration: Citric Acid and Glyoxylate Cycles 93
- 3.13 Catabolic Diversity 95

IV Biosyntheses 96

- 3.14 Sugars and Polysaccharides 97
- 3.15 Amino Acids and Nucleotides 98
- 3.16 Fatty Acids and Lipids 99
- 3.17 Nitrogen Fixation 100

CHAPTER 4

Molecular Microbiology 107

microbiologynow

The Essence of Life: Molecular Microbiology 107

I The Blueprint of Life: Structure of the Bacterial Genome 108

- 4.1 Macromolecules and Genes 108
- 4.2 The Double Helix 109
- 4.3 Genetic Elements: Chromosomes and Plasmids 111

II Transmission of Genetic Information: DNA Replication 115

- 4.4 Templates and Enzymes 115
- 4.5 The Replication Fork 116
- 4.6 Bidirectional Replication and the Replisome 118

III RNA Synthesis: Transcription 120

- 4.7 Transcription 121
- 4.8 The Unit of Transcription 123
- 4.9 Transcription in *Archaea* and *Eukarya* 125

IV Protein Synthesis 127

- 4.10 Polypeptides, Amino Acids, and the Peptide Bond 127
- 4.11 Translation and the Genetic Code 128
- 4.12 Transfer RNA 131
- 4.13 Protein Synthesis 132
- 4.14 Protein Folding and Secretion 135

CHAPTER 5

Microbial Growth and Control 143

microbiologynow

Did the First Cells on Earth Have Cell Walls? 143

I Bacterial Cell Division 144

- 5.1 Binary Fission 144
- 5.2 Fts Proteins and Cell Division 144
- 5.3 MreB and Cell Morphology 147
- 5.4 Peptidoglycan Biosynthesis 148

II Population Growth 149

- 5.5 Quantitative Aspects of Microbial Growth 149
- 5.6 The Growth Cycle 151
- 5.7 Continuous Culture 152

III Measuring Microbial Growth 154

- 5.8 Microscopic Counts 154
- 5.9 Viable Counts 155
- 5.10 Spectrophotometry 157

IV Effect of Temperature on Microbial Growth 158

- 5.11 Temperature Classes of Microorganisms 158

EXPLORE THE MICROBIAL WORLD

Stick or Swim 159

- 5.12 Microbial Life in the Cold 161

- 5.13 Microbial Life at High Temperatures 163

V Other Environmental Effects on Microbial Growth 165

- 5.14 Effects of pH on Microbial Growth 165
- 5.15 Osmolarity and Microbial Growth 167
- 5.16 Oxygen and Microbial Growth 168

VI Control of Microbial Growth 171

- 5.17 General Principles and Growth Control by Heat 171
- 5.18 Other Physical Control Methods: Radiation and Filtration 173
- 5.19 Chemical Control of Microbial Growth 176

UNIT 2 Genomics, Genetics, and Virology

CHAPTER 6

Microbial Genomics 183

microbiologynow

Genomics and New *Archaea* 183

I Investigating Genomes 184

- 6.1 Introduction to Genomics 184
- 6.2 Sequencing Genomes 184
- 6.3 Bioinformatics and Annotating Genomes 189

II Microbial Genomes 190

- 6.4 Genome Size and Content 190
- 6.5 Genomes of Organelles 194
- 6.6 Eukaryotic Microbial Genomes 197

III Functional Genomics 198

- 6.7 Microarrays and the Transcriptome 198
- 6.8 Proteomics and the Interactome 201

- 6.9 Metabolomics and Systems Biology 203
- 6.10 Metagenomics 204
- EXPLORE THE MICROBIAL WORLD
- Genomics, One Cell at a Time 205
- IV The Evolution of Genomes 206**
- 6.11 Gene Families, Duplications, and Deletions 206
- 6.12 Horizontal Gene Transfer and Genome Stability 208
- 6.13 Core Genome versus Pan Genome 209

CHAPTER 7

Metabolic Regulation 215

microbiologynow

Luminescence or Lethality? 215

- I Overview of Regulation 216**
- 7.1 Major Modes of Regulation 216
- II DNA-Binding Proteins and Transcriptional Regulation 217**
- 7.2 DNA-Binding Proteins 217
- 7.3 Negative Control: Repression and Induction 219
- 7.4 Positive Control: Activation 220
- 7.5 Global Control and the *lac* Operon 222
- 7.6 Transcription Controls in *Archaea* 224
- III Sensing and Signal Transduction 225**
- 7.7 Two-Component Regulatory Systems 225
- 7.8 Regulation of Chemotaxis 226
- 7.9 Quorum Sensing 228
- 7.10 Other Global Control Networks 230
- IV Regulation of Development in Model Bacteria 232**
- 7.11 Sporulation in *Bacillus* 232
- 7.12 *Caulobacter* Differentiation 233
- 7.13 Nitrogen Fixation, Nitrogenase, and Heterocyst Formation 234
- V RNA-Based Regulation 236**
- 7.14 Regulatory RNAs: Small RNAs and Antisense RNA 236
- 7.15 Riboswitches 237
- 7.16 Attenuation 238
- VI Regulation of Enzymes and Other Proteins 240**
- 7.17 Feedback Inhibition 240
- 7.18 Post-Translational Regulation 241

CHAPTER 8

Viruses and Virology 245

microbiologynow

Where Did Viruses Come From? 245

- I The Nature of Viruses 246**
- 8.1 What Is a Virus? 246
- 8.2 Structure of the Virion 247
- 8.3 Overview of the Virus Life Cycle 249
- 8.4 Culturing, Detecting, and Counting Viruses 250
- II Bacteriophage Life Cycles 251**
- 8.5 Attachment and Entry of Bacteriophage T4 251
- 8.6 The T4 Genome 252
- 8.7 Replication of Bacteriophage T4 253
- 8.8 Temperate Bacteriophages and Lysogeny 255
- III Viral Diversity and Ecology 257**
- 8.9 An Overview of Bacterial Viruses 257
- 8.10 An Overview of Animal Viruses 258
- 8.11 The Virosphere and Viral Ecology 261

CHAPTER 9

Viral Genomes and Diversity 265

microbiologynow

Ever-Expanding Viral Diversity 265

- I Viral Genomes and Evolution 266**
- 9.1 Size and Structure of Viral Genomes 266
- 9.2 Viral Evolution 268
- II Viruses with DNA Genomes 270**
- 9.3 Single-Stranded DNA Bacteriophages: ϕ X174 and M13 270
- 9.4 Double-Stranded DNA Bacteriophages: T7 and Mu 272
- 9.5 Viruses of *Archaea* 273
- 9.6 Uniquely Replicating DNA Animal Viruses 274
- 9.7 DNA Tumor Viruses 276
- III Viruses with RNA Genomes 277**
- 9.8 Positive-Strand RNA Viruses 277
- 9.9 Negative-Strand RNA Animal Viruses 279
- 9.10 Double-Stranded RNA Viruses 281
- 9.11 Viruses That Use Reverse Transcriptase 282
- IV Subviral Agents 285**
- 9.12 Viroids 285
- 9.13 Prions 286

CHAPTER 10

Genetics of *Bacteria* and *Archaea* 291

microbiologynow

Defunct Viruses or Secret Agents of Gene Transfer? 291

I Mutation 292

- 10.1 Mutations and Mutants 292
- 10.2 Molecular Basis of Mutation 293
- 10.3 Reversions and Mutation Rates 295
- 10.4 Mutagenesis 297

II Gene Transfer in *Bacteria* 299

- 10.5 Genetic Recombination 300
- 10.6 Transformation 301
- 10.7 Transduction 303
- 10.8 Conjugation 305
- 10.9 The Formation of Hfr Strains and Chromosome Mobilization 307

III Gene Transfer in *Archaea* and Other Genetic Events 309

- 10.10 Horizontal Gene Transfer in *Archaea* 309
- 10.11 Mobile DNA: Transposable Elements 310
- 10.12 Preserving Genome Integrity: CRISPR Interference 311

CHAPTER 11

Genetic Engineering and Biotechnology 315

microbiologynow

From Pathogen to Tumor Assassin 315

I Methods for Manipulating DNA 316

- 11.1 Restriction Enzymes and Nucleic Acid Separation 316
- 11.2 Nucleic Acid Hybridization 318
- 11.3 Polymerase Chain Reaction (PCR) 319
- 11.4 Essentials of Molecular Cloning 321
- 11.5 Molecular Methods for Mutagenesis 323
- 11.6 Gene Fusions and Reporter Genes 324

II Gene Cloning 326

- 11.7 Plasmids as Cloning Vectors 326
- 11.8 Hosts for Cloning Vectors 328
- 11.9 Shuttle Vectors and Expression Vectors 328
- 11.10 Other Cloning Vectors 331

III Products from Genetically Engineered Microorganisms 333

- 11.11 Expressing Mammalian Genes in *Bacteria* 333

- 11.12 Somatotropin and Other Mammalian Proteins 335
- 11.13 Transgenic Organisms in Agriculture and Aquaculture 336
- 11.14 Genetically Engineered Vaccines 339
- 11.15 Mining Genomes 340
- 11.16 Engineering Metabolic Pathways 341
- 11.17 Synthetic Biology 342

UNIT 3 Microbial Diversity

CHAPTER 12

Microbial Evolution and Systematics 347

microbiologynow

Gene Exchange and the Evolution of Marine *Vibrio* 347

I Early Earth and the Origin and Diversification of Life 348

- 12.1 Formation and Early History of Earth 348
- 12.2 Photosynthesis and the Oxidation of Earth 351
- 12.3 Endosymbiotic Origin of Eukaryotes 353

II Living Fossils: DNA Records the History of Life 355

- 12.4 Molecular Phylogeny and the Tree of Life 355
- 12.5 Molecular Phylogeny: Making Sense of Molecular Sequences 359

III Microbial Evolution 363

- 12.6 The Evolutionary Process 363
- 12.7 The Evolution of Microbial Genomes 366

EXPLORE THE MICROBIAL WORLD

The Black Queen Hypothesis 368

IV Microbial Systematics 369

- 12.8 The Species Concept in Microbiology 369
- 12.9 Taxonomic Methods in Systematics 370
- 12.10 Classification and Nomenclature 374

CHAPTER 13

Metabolic Diversity of Microorganisms 379

microbiologynow

Unraveling Microbial Metabolisms 379

I Phototrophy 380

- 13.1 Photosynthesis and Chlorophylls 380
- 13.2 Carotenoids and Phycobilins 383

- 13.3 Anoxygenic Photosynthesis 385
- 13.4 Oxygenic Photosynthesis 388
- 13.5 Autotrophic Pathways 390

II Chemolithotrophy 393

- 13.6 Inorganic Compounds as Electron Donors 393
- 13.7 Hydrogen (H_2) Oxidation 394
- 13.8 Oxidation of Reduced Sulfur Compounds 395
- 13.9 Iron (Fe^{2+}) Oxidation 396
- 13.10 Nitrification and Anammox 398

III Fermentations 401

- 13.11 Energetic and Redox Considerations 401
- 13.12 Lactic and Mixed-Acid Fermentations 402
- 13.13 Clostridial and Propionate Fermentations 404
- 13.14 Fermentations without Substrate-Level Phosphorylation 407
- 13.15 Syntrophy 408

IV Anaerobic Respirations 410

- 13.16 Principles of Anaerobic Respiration 410
- 13.17 Nitrate Reduction and Denitrification 411
- 13.18 Sulfate and Sulfur Reduction 413
- 13.19 Acetogenesis 415
- 13.20 Methanogenesis 417
- 13.21 Other Electron Acceptors 421

V Hydrocarbon Metabolism 424

- 13.22 Aerobic Hydrocarbon Metabolism 424
- 13.23 Aerobic Methanotrophy 425
- 13.24 Anoxic Hydrocarbon Metabolism 427

CHAPTER 14

Functional Diversity of *Bacteria* 433

microbiologynow

One Culture Away 433

I Functional Diversity as a Concept 434

- 14.1 Making Sense of Microbial Diversity 434

II Diversity of Phototrophic *Bacteria* 435

- 14.2 Overview of Phototrophic *Bacteria* 435
- 14.3 *Cyanobacteria* 436
- 14.4 Purple Sulfur *Bacteria* 440
- 14.5 Purple Nonsulfur *Bacteria* and Aerobic Anoxygenic Phototrophs 442
- 14.6 Green Sulfur *Bacteria* 443
- 14.7 Green Nonsulfur *Bacteria* 444
- 14.8 Other Phototrophic *Bacteria* 446

III Bacterial Diversity in the Sulfur Cycle 447

- 14.9 Dissimilative Sulfate-Reducing *Bacteria* 447

- 14.10 Dissimilative Sulfur-Reducing *Bacteria* 448

- 14.11 Dissimilative Sulfur-Oxidizing *Bacteria* 449

IV Bacterial Diversity in the Nitrogen Cycle 452

- 14.12 Diversity of Nitrogen-Fixing *Bacteria* 453
- 14.13 Diversity of Nitrifying and Denitrifying *Bacteria* and *Archaea* 454

V Diversity of Other Distinctive Chemotrophic *Bacteria* 456

- 14.14 Dissimilative Iron-Reducing *Bacteria* 456
- 14.15 Dissimilative Iron-Oxidizing *Bacteria* 457
- 14.16 Hydrogen-Metabolizing *Bacteria* 458
- 14.17 Methanotrophic and Methylotrophic *Bacteria* 459
- 14.18 Acetic Acid *Bacteria* and Acetogens 461
- 14.19 Predatory *Bacteria* 462

VI Morphological Diversity of *Bacteria* 466

- 14.20 Spirochetes and Spirilla 466
- 14.21 Budding and Prosthecate/Stalked *Bacteria* 468
- 14.22 Sheathed *Bacteria* 472
- 14.23 Magnetic *Bacteria* 472
- 14.24 Bacterial Bioluminescence 474

CHAPTER 15

Diversity of *Bacteria* 479

microbiologynow

Discovering Novel Microbial Phyla 479

I *Proteobacteria* 480

- 15.1 *Alphaproteobacteria* 481
- 15.2 *Betaproteobacteria* 484
- 15.3 *Gammaproteobacteria*—*Enterobacteriales* 486
- 15.4 *Gammaproteobacteria*—*Pseudomonadales* and *Vibrionales* 488
- 15.5 *Deltaproteobacteria* and *Epsilonproteobacteria* 489

II *Firmicutes*, *Tenericutes*, and *Actinobacteria* 491

- 15.6 *Firmicutes*—*Lactobacillales* 491
- 15.7 *Firmicutes*—Nonsporulating *Bacillales* and *Clostridiales* 493
- 15.8 *Firmicutes*—Sporulating *Bacillales* and *Clostridiales* 494
- 15.9 *Tenericutes*: The *Mycoplasmas* 497
- 15.10 *Actinobacteria*: Coryneform and Propionic Acid *Bacteria* 499
- 15.11 *Actinobacteria*: *Mycobacterium* 500
- 15.12 Filamentous *Actinobacteria*: *Streptomyces* and Relatives 501

III *Bacteroidetes* 504

- 15.13 *Bacteroidales* 504
- 15.14 *Cytophagales*, *Flavobacteriales*, and *Sphingobacteriales* 505

IV *Chlamydiae*, *Planctomycetes*, and *Verrucomicrobia* 506

- 15.15 *Chlamydiae* 506
- 15.16 *Planctomycetes* 508
- 15.17 *Verrucomicrobia* 509

V *Hyperthermophilic Bacteria* 510

- 15.18 *Thermotogae* and *Thermodesulfobacteria* 510
- 15.19 *Aquificae* 511

VI *Other Bacteria* 512

- 15.20 *Deinococcus-Thermus* 512
- 15.21 Other Notable Phyla of *Bacteria* 513

CHAPTER 16

Diversity of Archaea 517

microbiologynow

Archaea and Global Warming 517

I *Euryarchaeota* 518

- 16.1 Extremely Halophilic *Archaea* 519
- 16.2 Methanogenic *Archaea* 522
- 16.3 *Thermoplasmatales* 525
- 16.4 *Thermococcales* and *Methanopyrus* 526
- 16.5 *Archaeoglobales* 527

II *Thaumarchaeota*, *Nanoarchaeota*, and *Korarchaeota* 528

- 16.6 *Thaumarchaeota* and Nitrification in *Archaea* 528
- 16.7 *Nanoarchaeota* and the "Hospitable Fireball" 529
- 16.8 *Korarchaeota* and the "Secret Filament" 530

III *Crenarchaeota* 531

- 16.9 Habitats and Energy Metabolism of *Crenarchaeota* 531
- 16.10 *Crenarchaeota* from Terrestrial Volcanic Habitats 532
- 16.11 *Crenarchaeota* from Submarine Volcanic Habitats 534

IV Evolution and Life at High Temperatures 537

- 16.12 An Upper Temperature Limit for Microbial Life 537
- 16.13 Molecular Adaptations to Life at High Temperature 538
- 16.14 Hyperthermophilic *Archaea*, H_2 , and Microbial Evolution 540

CHAPTER 17

Diversity of Eukaryotic Microorganisms 543

microbiologynow

Horizontal Gene Transfer in an Extremophilic Eukaryote 543

I Organelles and Phylogeny of Microbial Eukaryotes 544

- 17.1 Endosymbioses and the Eukaryotic Cell 544
- 17.2 Phylogenetic Lineages of *Eukarya* 545

II Protists 547

- 17.3 Diplomonads and Parabasalids 547
- 17.4 Euglenozoans 548
- 17.5 Alveolates 549
- 17.6 Stramenopiles 551
- 17.7 Cercozoans and Radiolarians 552
- 17.8 Amoebozoa 554

III Fungi 556

- 17.9 Fungal Physiology, Structure, and Symbioses 556
- 17.10 Fungal Reproduction and Phylogeny 557
- 17.11 Chytridiomycetes 558
- 17.12 Zygomycetes and Glomeromycetes 559
- 17.13 Ascomycetes 560
- 17.14 Mushrooms and Other Basidiomycetes 561

IV Red and Green Algae 562

- 17.15 Red Algae 562
- 17.16 Green Algae 563

UNIT 4 Microbial Ecology and Environmental Microbiology

CHAPTER 18

Methods in Microbial Ecology 567

microbiologynow

Stitching Together Genomes 567

I Culture-Dependent Analyses of Microbial Communities 568

- 18.1 Enrichment 568
- 18.2 Isolation 572

EXPLORE THE MICROBIAL WORLD
Culturing the Uncultured 574

II Culture-Independent Microscopic Analyses of Microbial Communities 575

- 18.3 General Staining Methods 575
- 18.4 Fluorescence In Situ Hybridization (FISH) 577

III Culture-Independent Genetic Analyses of Microbial Communities 579

- 18.5 PCR Methods of Microbial Community Analysis 579
- 18.6 Microarrays for Analysis of Microbial Phylogenetic Functional Diversity 582

- 18.7** Environmental Genomics and Related Methods 584
- IV Measuring Microbial Activities in Nature 587**
- 18.8** Chemical Assays, Radioisotopic Methods, and Microsensors 587
- 18.9** Stable Isotopes 589
- 18.10** Linking Genes and Functions to Specific Organisms: SIMS, Flow Cytometry, and MAR-FISH 590
- 18.11** Linking Genes and Functions to Specific Organisms: Stable Isotope Probing and Single-Cell Genomics 593

CHAPTER 19**Microbial Ecosystems 597**

microbiologynow

Living in a World of Extreme Energy Limitation 597

I Microbial Ecology 598

- 19.1** General Ecological Concepts 598
- 19.2** Ecosystem Service: Biogeochemistry and Nutrient Cycles 599

II The Microbial Environment 600

- 19.3** Environments and Microenvironments 600
- 19.4** Surfaces and Biofilms 602
- 19.5** Microbial Mats 605

III Terrestrial Environments 607

- 19.6** Soils 607
- 19.7** The Subsurface 611

IV Aquatic Environments 613

- 19.8** Freshwaters 613
- 19.9** The Marine Environment: Phototrophs and Oxygen Relationships 615
- 19.10** Major Marine Phototrophs 617
- 19.11** Pelagic *Bacteria*, *Archaea*, and *Viruses* 619
- 19.12** The Deep Sea and Deep-Sea Sediments 622
- 19.13** Hydrothermal Vents 625

CHAPTER 20**Nutrient Cycles 631**

microbiologynow

Microbial Power Lines 631

I Carbon, Nitrogen, and Sulfur Cycles 632

- 20.1** The Carbon Cycle 632
- 20.2** Syntrophy and Methanogenesis 634
- 20.3** The Nitrogen Cycle 636
- 20.4** The Sulfur Cycle 638

II Other Nutrient Cycles 639

- 20.5** The Iron and Manganese Cycles 639
- EXPLORE THE MICROBIAL WORLD
Microbially Wired 641
- 20.6** The Phosphorus, Calcium, and Silica Cycles 642
- III Humans and Nutrient Cycling 645**
- 20.7** Mercury Transformations 645
- 20.8** Human Impacts on the Carbon and Nitrogen Cycles 646

CHAPTER 21**Microbiology of the Built Environment 649**

microbiologynow

Your Subway System: What's in the Air? 649

I Mineral Recovery and Acid Mine Drainage 650

- 21.1** Mining with Microorganisms 650
- 21.2** Acid Mine Drainage 652

II Bioremediation 653

- 21.3** Bioremediation of Uranium-Contaminated Environments 653
- 21.4** Bioremediation of Organic Pollutants: Hydrocarbons 654
- 21.5** Bioremediation of Organic Pollutants: Pesticides and Plastics 655

III Wastewater and Drinking Water Treatment 657

- 21.6** Primary and Secondary Wastewater Treatment 657
- 21.7** Advanced Wastewater Treatment 659
- 21.8** Drinking Water Purification and Stabilization 662
- 21.9** Municipal and Premise Water Distribution Systems 663

IV Microbially Influenced Corrosion 664

- 21.10** Microbially Influenced Corrosion of Metals 665
- 21.11** Biodeterioration of Stone and Concrete 666

CHAPTER 22**Microbial Symbioses 669**

microbiologynow

A Symbiotic Trio Sustains Seagrass Ecosystems 669

I Symbioses between Microorganisms 670

- 22.1** Lichens 670
- 22.2** "*Chlorochromatium aggregatum*" 671

II Plants as Microbial Habitats 672

- 22.3 The Legume–Root Nodule Symbiosis 673
- 22.4 *Agrobacterium* and Crown Gall Disease 678
- 22.5 Mycorrhizae 679

III Mammals as Microbial Habitats 682

- 22.6 The Mammalian Gut 682
- 22.7 The Rumen and Ruminant Animals 683
- 22.8 The Human Microbiome 687

IV Insects as Microbial Habitats 691

- 22.9 Heritable Symbionts of Insects 691

EXPLORE THE MICROBIAL WORLD

The Multiple Microbial Symbionts of Fungus-Cultivating Ants 693

- 22.10 Termites 694

V Aquatic Invertebrates as Microbial Habitats 696

- 22.11 Hawaiian Bobtail Squid 696
- 22.12 Marine Invertebrates at Hydrothermal Vents and Gas Seeps 697
- 22.13 Leeches 699
- 22.14 Reef-Building Corals 700

UNIT 5 Pathogenicity and Immunology**CHAPTER 23****Microbial Interactions with Humans 705****microbiologynow**

The Fungal Microbiome of the Skin 705

I Normal Human–Microbial Interactions 706

- 23.1 Beneficial Human–Microbial Interactions 706
- 23.2 Microflora of the Skin 707
- 23.3 Microflora of the Oral Cavity 708
- 23.4 Microflora of the Gastrointestinal Tract 709

EXPLORE THE MICROBIAL WORLD

Probiotics 711

- 23.5 Microflora of Mucosal Tissues 712

II Pathogenesis 714

- 23.6 Pathogenicity and Virulence 714
- 23.7 Adherence 715
- 23.8 Invasion, Infection, and Virulence Factors 717
- 23.9 Exotoxins 720
- 23.10 Endotoxins 724

III Host Factors in Infection and Disease 725

- 23.11 Innate Resistance to Infection 725
- 23.12 Risk Factors for Infection 727

CHAPTER 24**Immunity and Host Defense 731****microbiologynow**

A Cure for Peanut Allergies? 731

I Immunity 732

- 24.1 Cells and Organs of the Immune System 732
- 24.2 Innate Immunity 735
- 24.3 Adaptive Immunity 735
- 24.4 Antibodies 737

II Host Defense 739

- 24.5 Inflammation 739
- 24.6 Immunity and Immunization 741
- 24.7 Immunization Strategies 744

EXPLORE THE MICROBIAL WORLD

Vaccines and Public Health 746

III Immune Diseases 747

- 24.8 Allergy, Hypersensitivity, and Autoimmunity 747
- 24.9 Superantigens: Overactivation of T Cells 749

CHAPTER 25**Immune Mechanisms 753****microbiologynow**

Why Is Alum in Your Vaccine? 753

I Basic Immune Mechanisms 754

- 25.1 Innate Response Mechanisms 754
- 25.2 Adaptive Response Properties 756

II Antigens and Antigen Presentation 757

- 25.3 Immunogens and Antigens 757
- 25.4 Antigen Presentation to T Cells 759

III T Lymphocytes and Immunity 761

- 25.5 T-Cytotoxic Cells and Natural Killer Cells 761
- 25.6 T-Helper Cells 762

IV Antibodies and Immunity 764

- 25.7 Antibody Structure 765
- 25.8 Antibody Production 767
- 25.9 Antibodies, Complement, and Pathogen Destruction 768

CHAPTER 26**Molecular Immunology 773****microbiologynow**

Ancient Hominids Helped Shape Modern Immunity 773

I Receptors and Immunity 774

- 26.1 Innate Immunity and Pattern Recognition 774

EXPLORE THE MICROBIAL WORLD

Drosophila Toll Receptors—An Ancient Response to Infections 775

- 26.2 Adaptive Immunity and the Immunoglobulin Superfamily 776

II The Major Histocompatibility Complex (MHC) 778

- 26.3 MHC Proteins 778
26.4 MHC Polymorphism, Polygeny, and Peptide Antigen Binding 780

III Antibodies and T Cell Receptors 781

- 26.5 Antibody Proteins and Antigen Binding 781
26.6 Antibody Genes and Diversity 782
26.7 T Cell Receptors: Proteins, Genes, and Diversity 784

IV Molecular Switches in Immunity 785

- 26.8 Clonal Selection and Tolerance 785
26.9 T Cell and B Cell Activation 787
26.10 Cytokines and Chemokines 788

CHAPTER 27**Diagnostic Microbiology 793****microbiologynow**

Antibiotics and Honeybees 793

I The Clinical Environment 794

- 27.1 Safety in the Microbiology Laboratory 794
27.2 Healthcare-Associated Infections 795

II Microbiological Identification of Pathogens 797

- 27.3 Direct Detection of Pathogens 797
27.4 Growth-Dependent Identification Methods 801
27.5 Antimicrobial Drug Susceptibility Testing 802

III Growth-Independent Diagnostic Methods 803

- 27.6 Immunoassays for Infectious Diseases 804
27.7 Agglutination 805
27.8 Immunofluorescence 806
27.9 Enzyme Immunoassays, Rapid Tests, and Immunoblots 807
27.10 Nucleic Acid Amplification 810

IV Antimicrobial Drugs 811

- 27.11 Synthetic Antimicrobial Drugs 811
27.12 Natural Antimicrobial Drugs: Antibiotics 813
27.13 β -Lactam Antibiotics: Penicillins and Cephalosporins 814
27.14 Antibiotics from *Bacteria* 815

- 27.15 Antiviral Drugs 816

- 27.16 Antifungal Drugs 818

V Antimicrobial Drug Resistance 819

- 27.17 Resistance Mechanisms and Spread 819
27.18 New Antimicrobial Drugs 822

UNIT 6 Infectious Diseases and Their Transmission**CHAPTER 28****Epidemiology 827****microbiologynow**

MERS-CoV: An Emerging Disease 827

I Principles of Epidemiology 828

- 28.1 Epidemiology Basics 828
28.2 The Host Community 830
28.3 Infectious Disease Transmission 831

EXPLORE THE MICROBIAL WORLD

SARS—A Model of Epidemiological Success 834

- 28.4 Disease Reservoirs and Epidemics 835

II Epidemiology and Public Health 836

- 28.5 Public Health and Infectious Disease 836
28.6 Global Health Comparisons 839

III Emerging Infectious Diseases 840

- 28.7 Emerging and Reemerging Infectious Diseases 840
28.8 Biological Warfare and Biological Weapons 844

IV Current Pandemics 846

- 28.9 The HIV/AIDS Pandemic 846
28.10 Cholera Pandemics 848
28.11 Influenza Pandemics 849

CHAPTER 29**Person-to-Person Bacterial and Viral Diseases 853****microbiologynow**

Is Another Influenza Pandemic on the Way? 853

I Airborne Bacterial Diseases 854

- 29.1 Airborne Pathogens 854
29.2 Streptococcal Diseases 855
29.3 Diphtheria and Pertussis 858
29.4 Tuberculosis and Leprosy 859
29.5 Meningitis and Meningococcemia 862

- II Airborne Viral Diseases 862**
 - 29.6 Viruses and Respiratory Infections 862
 - 29.7 Colds 864
 - 29.8 Influenza 865
- III Direct-Contact Diseases 868**
 - 29.9 *Staphylococcus aureus* Infections 868
 - 29.10 *Helicobacter pylori* and Gastric Ulcers 870
 - 29.11 Hepatitis Viruses 870
- IV Sexually Transmitted Infections 872**
 - 29.12 Gonorrhea and Syphilis 873
 - 29.13 Chlamydia, Herpes, and Human Papillomavirus 875
 - 29.14 HIV/AIDS 877

CHAPTER 30**Vectorborne and Soilborne Bacterial and Viral Diseases 885**microbiology**now**

Vampire Bats and Rabies 885

- I Animal-Transmitted Viral Diseases 886**
 - 30.1 Rabies Virus and Rabies 886
 - 30.2 Hantavirus and Hantavirus Syndromes 887
- II Arthropod-Transmitted Bacterial and Viral Diseases 888**
 - 30.3 Rickettsial Diseases 888

EXPLORE THE MICROBIAL WORLD
Handling Viral Hemorrhagic Fever Viruses 889

 - 30.4 Lyme Disease and *Borrelia* 891
 - 30.5 Yellow Fever and Dengue Fever 893
 - 30.6 West Nile Fever 894
 - 30.7 Plague 896
- III Soilborne Bacterial Diseases 897**
 - 30.8 Anthrax 897
 - 30.9 Tetanus and Gas Gangrene 899

CHAPTER 31**Water and Food as Vehicles of Bacterial Diseases 903**microbiology**now**

Prison Pruno Packs a Life-Threatening Punch 903

- I Water as a Disease Vehicle 904**
 - 31.1 Agents and Sources of Waterborne Diseases 904
 - 31.2 Public Health and Water Quality 905

- II Waterborne Diseases 906**
 - 31.3 *Vibrio cholerae* and Cholera 906
 - 31.4 Legionellosis 907
 - 31.5 Typhoid Fever and Norovirus Illness 908
- III Food as a Disease Vehicle 909**
 - 31.6 Food Spoilage and Food Preservation 909
 - 31.7 Foodborne Diseases and Food Epidemiology 911
- IV Food Poisoning 913**
 - 31.8 Staphylococcal Food Poisoning 913
 - 31.9 Clostridial Food Poisoning 914
- V Food Infection 915**
 - 31.10 Salmonellosis 915
 - 31.11 Pathogenic *Escherichia coli* 916
 - 31.12 *Campylobacter* 917
 - 31.13 Listeriosis 918
 - 31.14 Other Foodborne Infectious Diseases 919

CHAPTER 32**Eukaryotic Pathogens: Fungal and Parasitic Diseases 923**microbiology**now**

Deadly Fungi 923

- I Fungal Infections 924**
 - 32.1 Medically Important Fungi and Disease Mechanisms 924
 - 32.2 Mycoses 926
- II Visceral Parasitic Infections 928**
 - 32.3 Amoebae and Ciliates: *Entamoeba*, *Naegleria*, and *Balantidium* 928
 - 32.4 Other Visceral Parasites: *Giardia*, *Trichomonas*, *Cryptosporidium*, *Toxoplasma*, and *Cyclospora* 929
- III Blood and Tissue Parasitic Infections 931**
 - 32.5 *Plasmodium* and Malaria 931
 - 32.6 Leishmaniasis, Trypanosomiasis, and Chagas' Disease 932
 - 32.7 Parasitic Helminths: Schistosomiasis and Filariases 933

Appendix 1 Energy Calculations in Microbial Bioenergetics 937

Appendix 2 Bergey's Manual of Systematic Bacteriology, Second Edition 941

Glossary 943
