

# Brief Contents

## 1 Biology and the Tree of Life 1

BioSkills 18

### UNIT 1 THE MOLECULAR ORIGIN AND EVOLUTION OF LIFE 55

- 2 Water and Carbon: The Chemical Basis of Life 55
- 3 Protein Structure and Function 78
- 4 Nucleic Acids and the RNA World 93
- 5 An Introduction to Carbohydrates 107
- 6 Lipids, Membranes, and the First Cells 119

### UNIT 2 CELL STRUCTURE AND FUNCTION 142

- 7 Inside the Cell 142
- 8 Energy and Enzymes: An Introduction to Metabolism 171
- 9 Cellular Respiration and Fermentation 189
- 10 Photosynthesis 210
- 11 Cell-Cell Interactions 234
- 12 The Cell Cycle 253

### UNIT 3 GENE STRUCTURE AND EXPRESSION 271

- 13 Meiosis 271
- 14 Mendel and the Gene 289
- 15 DNA and the Gene: Synthesis and Repair 316
- 16 How Genes Work 335
- 17 Transcription, RNA Processing, and Translation 348
- 18 Control of Gene Expression in Bacteria 367
- 19 Control of Gene Expression in Eukaryotes 379
- 20 The Molecular Revolution: Biotechnology and Beyond 398
- 21 Genes, Development, and Evolution 418

### UNIT 4 EVOLUTIONARY PATTERNS AND PROCESSES 435

- 22 Evolution by Natural Selection 435
- 23 Evolutionary Processes 456
- 24 Speciation 480
- 25 Phylogenies and the History of Life 496

### UNIT 5 THE DIVERSIFICATION OF LIFE 518

- 26 Bacteria and Archaea 518
- 27 Protists 539
- 28 Green Algae and Land Plants 561
- 29 Fungi 590
- 30 An Introduction to Animals 613
- 31 Protostome Animals 634
- 32 Deuterostome Animals 655
- 33 Viruses 682

### UNIT 6 HOW PLANTS WORK 704

- 34 Plant Form and Function 704
- 35 Water and Sugar Transport in Plants 727
- 36 Plant Nutrition 747
- 37 Plant Sensory Systems, Signals, and Responses 765
- 38 Plant Reproduction and Development 793

### UNIT 7 HOW ANIMALS WORK 818

- 39 Animal Form and Function 818
- 40 Water and Electrolyte Balance in Animals 836
- 41 Animal Nutrition 855
- 42 Gas Exchange and Circulation 874
- 43 Animal Nervous Systems 899
- 44 Animal Sensory Systems 922
- 45 Animal Movement 942
- 46 Chemical Signals in Animals 961
- 47 Animal Reproduction and Development 981
- 48 The Immune System in Animals 1008

### UNIT 8 ECOLOGY 1029

- 49 An Introduction to Ecology 1029
- 50 Behavioral Ecology 1051
- 51 Population Ecology 1070
- 52 Community Ecology 1092
- 53 Ecosystems and Global Ecology 1116
- 54 Biodiversity and Conservation Biology 1139

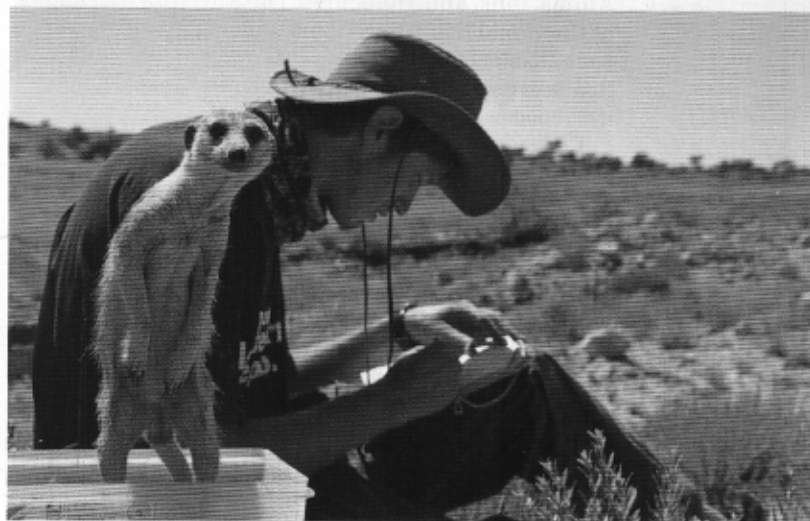

# Detailed Contents

## 1 Biology and the Tree of Life 1

- 1.1 What Does It Mean to Say That Something Is Alive?** 2
- 1.2 Life Is Cellular** 2
  - All Organisms Are Made of Cells 2
  - Where Do Cells Come From? 3
  - Life Replicates Through Cell Division 4
- 1.3 Life Evolves** 4
  - What Is Evolution? 4
  - What Is Natural Selection? 4
- 1.4 Life Processes Information** 5
  - The Central Dogma 5
  - Life Requires Energy 6
- 1.5 The Tree of Life** 6
  - Using Molecules to Understand the Tree of Life 6
  - How Should We Name Branches on the Tree of Life? 8
- 1.6 Doing Biology** 9
  - The Nature of Science 9
  - Why Do Giraffes Have Long Necks? An Introduction to Hypothesis Testing 9
  - How Do Ants Navigate? An Introduction to Experimental Design 11
- CHAPTER REVIEW** 14
- BIG PICTURE** Doing Biology 16

## BioSkills 18

- B.1 Using the Metric System and Significant Figures** 19
  - Metric System Units and Conversions 19
  - Significant Figures 20
- B.2 Reading and Making Graphs** 21
  - Getting Started 21
  - Types of Graphs 23
  - Getting Practice 23
- B.3 Interpreting Standard Error Bars and Using Statistical Tests** 24
  - Standard Error Bars 24
  - Using Statistical Tests 25
  - Interpreting P Values and Statistical Significance 25
- B.4 Working with Probabilities** 26
  - The Both-And Rule 26
  - The Either-Or Rule 26
- B.5 Using Logarithms** 27
- B.6 Separating and Visualizing Molecules** 28
  - Using Electrophoresis to Separate Molecules 28
  - Using Thin Layer Chromatography to Separate Molecules 29
  - Visualizing Molecules 29
- B.7 Separating Cell Components by Centrifugation** 31
- B.8 Using Spectrophotometry** 33

- B.9 Using Microscopy** 33
  - Light and Fluorescence Microscopy 33
  - Electron Microscopy 34
  - Studying Live Cells and Real-Time Processes 35
  - Visualizing Cellular Structures in 3-D 35
- B.10 Using Molecular Biology Tools and Techniques** 36
  - Making and Using DNA Libraries 36
  - Amplifying DNA Using the Polymerase Chain Reaction (PCR) 37
  - Dideoxy Sequencing 38
  - Shotgun Sequencing 39
  - DNA Microarray 40
- B.11 Using Cell Culture and Model Organisms as Tools** 41
  - Cell and Tissue Culture Methods 41
  - Model Organisms 42
- B.12 Reading and Making Visual Models** 45
  - Tips for Interpreting Models 45
  - Tips for Making your Own Models 46
  - Concept Maps 46
- B.13 Reading and Making Phylogenetic Trees** 47
  - Anatomy of a Phylogenetic Tree 47
  - How to Read a Phylogenetic Tree 48
  - How to Draw a Phylogenetic Tree 48
- B.14 Reading Chemical Structures** 49
- B.15 Translating Greek and Latin Roots in Biology** 50
- B.16 Reading and Citing the Primary Literature** 50
  - What Is the Primary Literature? 50
  - Getting Started 50
  - Citing Sources 52
  - Getting Practice 52
- B.17 Recognizing and Correcting Misconceptions** 52
- B.18 Using Bloom's Taxonomy for Study Success** 53
  - Categories of Human Cognition 53
  - Six Study Steps to Success 53

## 2 Water and Carbon: The Chemical Basis of Life 55

### 2.1 Atoms, Ions, and Molecules: The Building Blocks of Chemical Evolution 56

- Basic Atomic Structure 56
- How Does Covalent Bonding Hold Molecules Together? 58
- Ionic Bonding, Ions, and the Electron-Sharing  
Continuum 59
- Some Simple Molecules Formed from C, H, N, and O 60
- The Geometry of Simple Molecules 60
- Representing Molecules 60

### 2.2 Properties of Water and the Early Oceans 61

- Why Is Water Such an Efficient Solvent? 62
- What Properties Are Correlated with Water's  
Structure? 62
- The Role of Water in Acid-Base Chemical Reactions 65

### 2.3 Chemical Reactions, Energy, and Chemical Evolution 67

- How Do Chemical Reactions Happen? 67
- What Is Energy? 68
- What Makes a Chemical Reaction Spontaneous? 68

### 2.4 Model Systems for Investigating Chemical Evolution 70

- Early Origin-of-Life Experiments 70
- Recent Origin-of-Life Experiments 71

### 2.5 The Importance of Organic Molecules 73

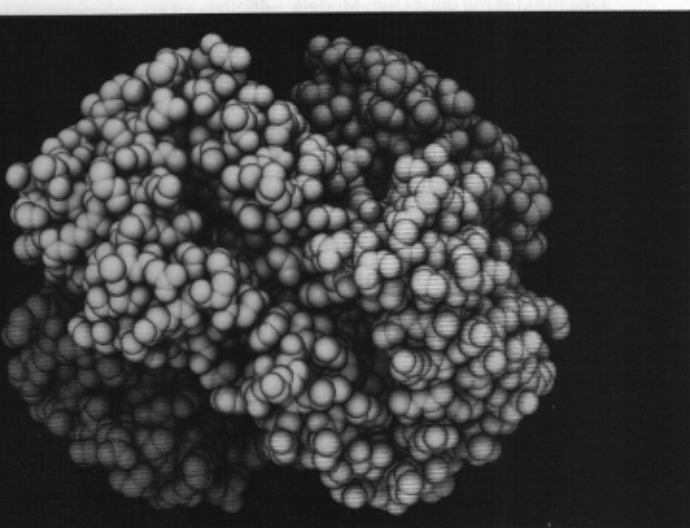

- Linking Carbon Atoms Together 73
- Functional Groups 75

CHAPTER REVIEW 75

## 3 Protein Structure and Function 78

### 3.1 Amino Acids and Their Polymerization 79

- The Structure of Amino Acids 79
- The Nature of Side Chains 79
- How Do Amino Acids Link to Form Proteins? 81

### 3.2 What Do Proteins Look Like? 83

- Primary Structure 84
- Secondary Structure 85
- Tertiary Structure 86
- Quaternary Structure 87

### 3.3 Folding and Function 88

- Normal Folding Is Crucial to Function 88
- Protein Shape Is Flexible 89

### 3.4 Protein Functions Are as Diverse as Protein Structures 90

- Why Are Enzymes Good Catalysts? 90
- Did Life Arise from a Self-Replicating Enzyme? 91

CHAPTER REVIEW 91

## 4 Nucleic Acids and the RNA World 93

### 4.1 What Is a Nucleic Acid? 94

- Could Chemical Evolution Result in the Production  
of Nucleotides? 95
- How Do Nucleotides Polymerize to Form  
Nucleic Acids? 95

### 4.2 DNA Structure and Function 97

- What Is the Nature of DNA's Secondary Structure? 97
- The Tertiary Structure of DNA 99
- DNA Functions as an Information-Containing Molecule 99
- The DNA Double Helix Is a Stable Structure 100

### 4.3 RNA Structure and Function 101

- Structurally, RNA Differs from DNA 101
- RNA's Versatility 102
- RNA Can Function as a Catalytic Molecule 102

### 4.4 In Search of the First Life-Form 103

- How Biologists Study the RNA World 104
- The RNA World May Have Sparked the Evolution  
of Life 104

CHAPTER REVIEW 105

## 5 An Introduction to Carbohydrates 107

### 5.1 Sugars as Monomers 108

- What Distinguishes One Monosaccharide from  
Another? 108
- Can Monosaccharides Form by Chemical Evolution? 109

### 5.2 The Structure of Polysaccharides 110

- Starch: A Storage Polysaccharide in Plants 111
- Glycogen: A Highly Branched Storage Polysaccharide in  
Animals 111
- Cellulose: A Structural Polysaccharide in Plants 113
- Chitin: A Structural Polysaccharide in Fungi and  
Animals 113
- Peptidoglycan: A Structural Polysaccharide in  
Bacteria 113
- Polysaccharides and Chemical Evolution 113

### 5.3 What Do Carbohydrates Do? 113

- Carbohydrates Can Provide Structural Support 114
- The Role of Carbohydrates in Cell Identity 114
- Carbohydrates and Energy Storage 115

CHAPTER REVIEW 117

## 6 Lipids, Membranes, and the First Cells 119

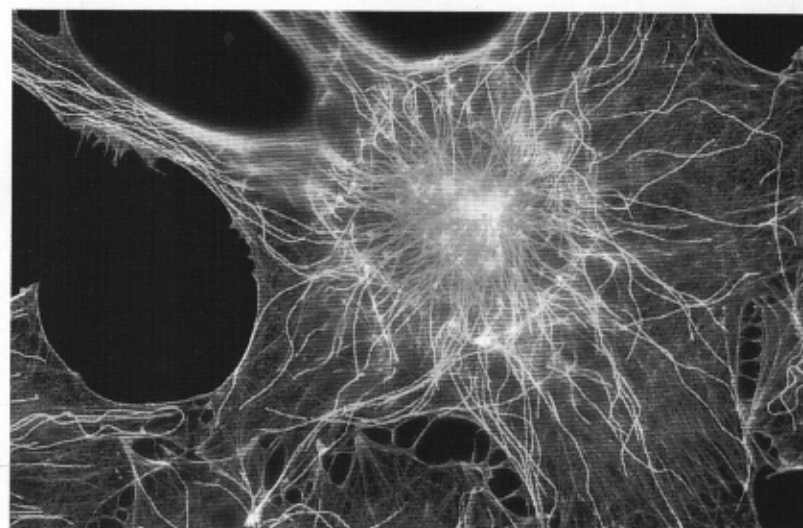

- 6.1 Lipid Structure and Function 120**
  - How Does Bond Saturation Affect Hydrocarbon Structure? 120
  - A Look at Three Types of Lipids Found in Cells 121
  - How Membrane Lipids Interact with Water 122
  - Were Lipids Present during Chemical Evolution? 123
- 6.2 Phospholipid Bilayers 123**
  - Artificial Membranes as an Experimental System 124
  - Selective Permeability of Lipid Bilayers 124
  - How Does Lipid Structure Affect Membrane Permeability? 125
  - How Does Temperature Affect the Fluidity and Permeability of Membranes? 126
- 6.3 How Substances Move across Lipid Bilayers: Diffusion and Osmosis 127**
  - Diffusion 127
  - Osmosis 128
  - Membranes and Chemical Evolution 129
- 6.4 Proteins Alter Membrane Structure and Function 130**
  - Development of the Fluid-Mosaic Model 130
  - Systems for Studying Membrane Proteins 132
  - Channel Proteins Facilitate Diffusion 132
  - Carrier Proteins Facilitate Diffusion 134
  - Pumps Perform Active Transport 135
  - Plasma Membranes Define the Intracellular Environment 137
- CHAPTER REVIEW 138

**Big Picture** The Chemistry of Life 140

## UNIT 2 CELL STRUCTURE AND FUNCTION 142

## 7 Inside the Cell 142

- 7.1 Bacterial and Archaeal Cell Structures and Their Functions 143**
  - A Revolutionary New View 143
  - Prokaryotic Cell Structures: A Parts List 143
- 7.2 Eukaryotic Cell Structures and Their Functions 146**
  - The Benefits of Organelles 146
  - Eukaryotic Cell Structures: A Parts List 146
- 7.3 Putting the Parts into a Whole 154**
  - Structure and Function at the Whole-Cell Level 154
  - The Dynamic Cell 154
- 7.4 Cell Systems I: Nuclear Transport 155**
  - Structure and Function of the Nuclear Envelope 155
  - How Do Molecules Enter the Nucleus? 156
- 7.5 Cell Systems II: The Endomembrane System Manufactures, Ships, and Recycles Cargo 157**
  - Studying the Pathway through the Endomembrane System 157
  - Entering the Endomembrane System: The Signal Hypothesis 159
  - Moving from the ER to the Golgi Apparatus 160

What Happens Inside the Golgi Apparatus? 160  
How Do Proteins Reach Their Destinations? 160  
Recycling Material in the Lysosome 160

- 7.6 Cell Systems III: The Dynamic Cytoskeleton 163**
  - Actin Filaments 163
  - Intermediate Filaments 164
  - Microtubules 164
  - Flagella and Cilia: Moving the Entire Cell 166
- CHAPTER REVIEW 168

## 8 Energy and Enzymes: An Introduction to Metabolism 171

- 8.1 What Happens to Energy in Chemical Reactions? 172**
  - Chemical Reactions Involve Energy Transformations 172
  - Temperature and Concentration Affect Reaction Rates 173
- 8.2 Nonspontaneous Reactions May Be Driven Using Chemical Energy 175**
  - Redox Reactions Transfer Energy via Electrons 175
  - ATP Transfers Energy via Phosphate Groups 177
- 8.3 How Enzymes Work 179**
  - Enzymes Help Reactions Clear Two Hurdles 179
  - What Limits the Rate of Catalysis? 181
  - Do Enzymes Work Alone? 182
- 8.4 What Factors Affect Enzyme Function? 182**
  - Enzymes Are Optimized for Particular Environments 182
  - Most Enzymes Are Regulated 183
- 8.5 Enzymes Can Work Together in Metabolic Pathways 184**
  - Metabolic Pathways Are Regulated 185
  - Metabolic Pathways Evolve 185
- CHAPTER REVIEW 186

## 9 Cellular Respiration and Fermentation 189

- 9.1 An Overview of Cellular Respiration 190**
  - What Happens When Glucose Is Oxidized? 190
  - Cellular Respiration Plays a Central Role in Metabolism 192

- 9.2 Glycolysis: Oxidizing Glucose to Pyruvate** 193  
Glycolysis Is a Sequence of 10 Reactions 193  
How Is Glycolysis Regulated? 194
- 9.3 Processing Pyruvate to Acetyl CoA** 196
- 9.4 The Citric Acid Cycle: Oxidizing Acetyl CoA to CO<sub>2</sub>** 197  
How Is the Citric Acid Cycle Regulated? 197  
What Happens to the NADH and FADH<sub>2</sub>? 199
- 9.5 Electron Transport and Chemiosmosis: Building a Proton Gradient to Produce ATP** 200  
The Electron Transport Chain 201  
The Discovery of ATP Synthase 203  
The Chemiosmosis Hypothesis 203  
Organisms Use a Diversity of Electron Acceptors 205
- 9.6 Fermentation** 206  
Many Different Fermentation Pathways Exist 206  
Fermentation as an Alternative to Cellular Respiration 207
- CHAPTER REVIEW 208

## 10 Photosynthesis 210

- 10.1 Photosynthesis Harnesses Sunlight to Make Carbohydrate** 211  
Photosynthesis: Two Linked Sets of Reactions 211  
Photosynthesis Occurs in Chloroplasts 212
- 10.2 How Do Pigments Capture Light Energy?** 213  
Photosynthetic Pigments Absorb Light 213  
When Light Is Absorbed, Electrons Enter an Excited State 216
- 10.3 The Discovery of Photosystems I and II** 218  
How Does Photosystem II Work? 218  
How Does Photosystem I Work? 220  
The Z Scheme: Photosystems II and I Work Together 221
- 10.4 How Is Carbon Dioxide Reduced to Produce Sugars?** 223  
The Calvin Cycle Fixes Carbon 223  
The Discovery of Rubisco 225  
How Is Photosynthesis Regulated? 226  
Oxygen and Carbon Dioxide Pass through Stomata 227  
Mechanisms for Increasing CO<sub>2</sub> Concentration 227

What Happens to the Sugar That Is Produced by Photosynthesis? 229

CHAPTER REVIEW 230

**Big Energy for Life** 232

## 11 Cell-Cell Interactions 234

- 11.1 The Cell Surface** 235  
The Structure and Function of an Extracellular Layer 235  
The Extracellular Matrix in Animals 235  
The Cell Wall in Plants 236
- 11.2 How Do Adjacent Cells Connect and Communicate?** 238  
Cell-Cell Attachments in Multicellular Eukaryotes 238  
Cells Communicate via Cell-Cell Gaps 241
- 11.3 How Do Distant Cells Communicate?** 243  
Cell-Cell Signaling in Multicellular Organisms 243  
Signal Reception 243  
Signal Processing 244  
Signal Response 248  
Signal Deactivation 248  
Crosstalk: Synthesizing Input from Many Signals 248
- 11.4 Signaling between Unicellular Organisms** 249
- CHAPTER REVIEW 250

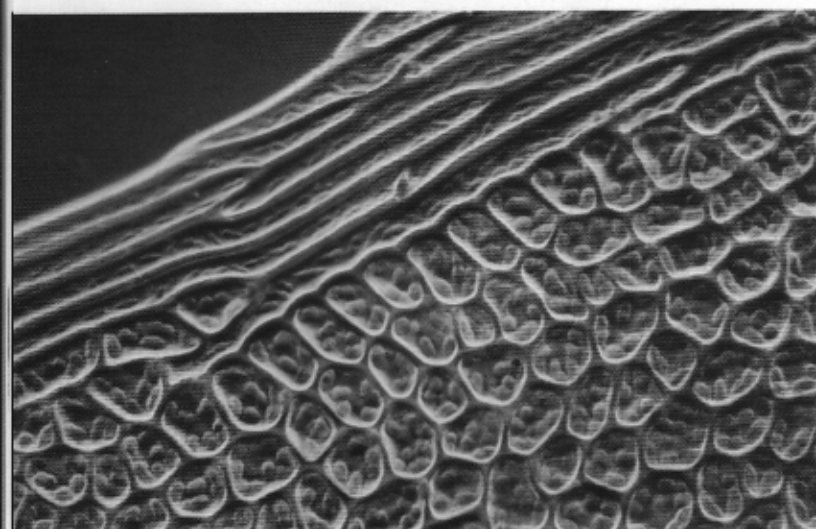

## 12 The Cell Cycle 253

- 12.1 How Do Cells Replicate?** 254  
What Is a Chromosome? 254  
Cells Alternate between M Phase and Interphase 255  
The Discovery of S Phase 255  
The Discovery of the Gap Phases 255  
The Cell Cycle 256
- 12.2 What Happens during M Phase?** 257  
Events in Mitosis 257  
How Do Chromosomes Move during Anaphase? 260  
Cytokinesis Results in Two Daughter Cells 262  
Bacterial Cell Replication 262
- 12.3 Control of the Cell Cycle** 263  
The Discovery of Cell-Cycle Regulatory Molecules 263  
Cell-Cycle Checkpoints Can Arrest the Cell Cycle 265
- 12.4 Cancer: Out-of-Control Cell Division** 266  
Properties of Cancer Cells 267  
Cancer Involves Loss of Cell-Cycle Control 267
- CHAPTER REVIEW 269

UNIT 3 GENE STRUCTURE AND EXPRESSION 271

## 13 Meiosis 271

- 13.1 How Does Meiosis Occur?** 272  
Chromosomes Come in Distinct Sizes and Shapes 272  
The Concept of Ploidy 273  
An Overview of Meiosis 273

|                                             |     |
|---------------------------------------------|-----|
| The Phases of Meiosis I                     | 277 |
| The Phases of Meiosis II                    | 278 |
| A Closer Look at Synapsis and Crossing Over | 279 |
| Mitosis versus Meiosis                      | 279 |

|                                                           |     |
|-----------------------------------------------------------|-----|
| <b>13.2 Meiosis Promotes Genetic Variation</b>            | 280 |
| Chromosomes and Heredity                                  | 281 |
| The Role of Independent Assortment                        | 281 |
| The Role of Crossing Over                                 | 282 |
| How Does Fertilization Affect Genetic Variation?          | 282 |
| <b>13.3 What Happens When Things Go Wrong in Meiosis?</b> | 283 |
| How Do Mistakes Occur?                                    | 283 |
| Why Do Mistakes Occur?                                    | 284 |
| <b>13.4 Why Does Meiosis Exist?</b>                       | 284 |
| The Paradox of Sex                                        | 284 |
| The Purifying Selection Hypothesis                        | 285 |
| The Changing-Environment Hypothesis                       | 285 |
| <b>CHAPTER REVIEW</b>                                     | 287 |

## 14 Mendel and the Gene 289

|                                                                                  |     |
|----------------------------------------------------------------------------------|-----|
| <b>14.1 Mendel's Experimental System</b>                                         | 290 |
| What Questions Was Mendel Trying to Answer?                                      | 290 |
| The Garden Pea Served as the First Model Organism in Genetics                    | 290 |
| <b>14.2 Mendel's Experiments with a Single Trait</b>                             | 292 |
| The Monohybrid Cross                                                             | 292 |
| Particulate Inheritance                                                          | 294 |
| <b>14.3 Mendel's Experiments with Two Traits</b>                                 | 296 |
| The Dihybrid Cross                                                               | 296 |
| Using a Testcross to Confirm Predictions                                         | 298 |
| <b>14.4 The Chromosome Theory of Inheritance</b>                                 | 299 |
| Meiosis Explains Mendel's Principles                                             | 300 |
| Testing the Chromosome Theory                                                    | 300 |
| <b>14.5 Extending Mendel's Rules</b>                                             | 302 |
| Linkage: What Happens When Genes Are Located on the Same Chromosome?             | 303 |
| Quantitative Methods 14.1 Linkage and Genetic Mapping                            | 305 |
| How Many Alleles Can a Gene Have?                                                | 306 |
| Are Alleles Always Dominant or Recessive?                                        | 306 |
| Does Each Gene Affect Just One Trait?                                            | 306 |
| Are All Traits Determined by a Gene?                                             | 307 |
| Can Mendel's Principles Explain Traits That Don't Fall into Distinct Categories? | 308 |
| <b>14.6 Applying Mendel's Rules to Human Inheritance</b>                         | 310 |
| Identifying Alleles as Recessive or Dominant                                     | 310 |
| Identifying Traits as Autosomal or Sex-Linked                                    | 311 |
| <b>CHAPTER REVIEW</b>                                                            | 312 |

## 15 DNA and the Gene: Synthesis and Repair 316

|                                                          |     |

| <b>17.3 An Introduction to Translation</b>             | 355 |
| Ribosomes Are the Site of Protein Synthesis            | 355 |
| Translation in Bacteria and Eukaryotes                 | 355 |
| How Does an mRNA Triplet Specify an Amino Acid?        | 356 |
| <b>17.4 The Structure and Function of Transfer RNA</b> | 356 |
| What Do tRNAs Look Like?                               | 357 |
| How Are Amino Acids Attached to tRNAs?                 | 358 |
| How Many tRNAs Are There?                              | 358 |

- 17.5 The Structure of Ribosomes and Their Function in Translation** 359  
 Initiating Translation 361  
 Elongation: Extending the Polypeptide 361  
 Terminating Translation 362  
 Post-Translational Modifications 363  
 CHAPTER REVIEW 364

## 18 Control of Gene Expression in Bacteria 367

- 18.1 An Overview of Gene Regulation and Information Flow** 368  
 Mechanisms of Regulation 368  
 Metabolizing Lactose—A Model System 369  
**18.2 Identifying Regulated Genes** 370  
**18.3 Negative Control of Transcription** 372  
 The Operon Model 373  
 How Does Glucose Regulate the *lac* Operon? 374  
 Why Has the *lac* Operon Model Been So Important? 375  
**18.4 Positive Control of Transcription** 375  
**18.5 Global Gene Regulation** 376  
 CHAPTER REVIEW 377

## 19 Control of Gene Expression in Eukaryotes 379

- 19.1 Gene Regulation in Eukaryotes—An Overview** 380  
**19.2 Chromatin Remodeling** 380  
 What Is Chromatin's Basic Structure? 381  
 Evidence that Chromatin Structure Is Altered in Active Genes 382  
 How Is Chromatin Altered? 382  
 Chromatin Modifications Can Be Inherited 383  
**19.3 Initiating Transcription: Regulatory Sequences and Proteins** 384  
 Promoter-Proximal Elements Are Regulatory Sequences Near the Core Promoter 385  
 Enhancers Are Regulatory Sequences Far from the Core Promoter 385  
 The Role of Transcription Factors in Differential Gene Expression 386  
 How Do Transcription Factors Recognize Specific DNA Sequences? 386  
 A Model for Transcription Initiation 387  
**19.4 Post-Transcriptional Control** 388  
 Alternative Splicing of Primary Transcripts 388  
 How Is Translation Controlled? 389  
 Post-Translational Control 391  
**19.5 How Does Gene Expression Compare in Bacteria and Eukaryotes?** 391  
**19.6 Linking Cancer to Defects in Gene Regulation** 392  
 The Genetic Basis of Uncontrolled Cell Growth 392  
 The p53 Tumor Suppressor: A Case Study 392  
 CHAPTER REVIEW 393

 Genetic Information 396

## 20 The Molecular Revolution: Biotechnology and Beyond 398

- 20.1 Recombinant DNA Technology** 399  
 Using Plasmids in Cloning 399  
 Using Restriction Endonucleases and DNA Ligase to Cut and Paste DNA 399  
 Transformation: Introducing Recombinant Plasmids into Bacterial Cells 401  
 Using Reverse Transcriptase to Produce cDNAs 401  
 Biotechnology in Agriculture 401  
**20.2 The Polymerase Chain Reaction** 401  
 Requirements of PCR 401  
 DNA Fingerprinting 402  
 A New Branch of the Human Family Tree 402  
**20.3 DNA Sequencing** 403  
 Whole-Genome Sequencing 404  
 Bioinformatics 404  
 Which Genomes Are Being Sequenced, and Why? 404  
 Which Sequences Are Genes? 404  
**20.4 Insights from Genome Analysis** 405  
 The Natural History of Prokaryotic Genomes 406  
 The Natural History of Eukaryotic Genomes 407  
 Insights from the Human Genome Project 410  
**20.5 Finding and Engineering Genes: The Huntington Disease Story** 411  
 How Was the Huntington Disease Gene Found? 411  
 How Are Human Genes Found Today? 412  
 What Are the Benefits of Finding a Disease Gene? 412  
 Can Gene Therapy Provide a Cure? 413  
**20.6 Functional Genomics, Proteomics, and Systems Biology** 414  
 What Is Functional Genomics? 414  
 What Is Proteomics? 414  
 What Is Systems Biology? 414  
 CHAPTER REVIEW 415

## 21 Genes, Development, and Evolution 418

- 21.1 Shared Developmental Processes** 419  
 Cell Division 419  
 Cell–Cell Interactions 420  
 Cell Differentiation 420  
 Cell Movement and Changes in Shape 421  
 Programmed Cell Death 421  
**21.2 Genetic Equivalence and Differential Gene Expression in Development** 422  
 Evidence that Differentiated Plant Cells Are Genetically Equivalent 422  
 Evidence that Differentiated Animal Cells Are Genetically Equivalent 422  
 How Does Differential Gene Expression Occur? 423  
**21.3 Regulatory Cascades Establish the Body Plan** 424  
 Morphogens Set Up the Body Axes 424  
 Regulatory Genes Provide Increasingly Specific Positional Information 426  
 Regulatory Genes and Signaling Molecules Are Evolutionarily Conserved 428

One Regulator Can Be Used Many Different Ways 429

- 21.4 Cells Are Determined Before They Differentiate** 429
  - Commitment and Determination 430
  - Master Regulators of Differentiation and Development 430
  - Stem Cell Therapy 431
- 21.5 Changes in Developmental Gene Expression Drive Evolutionary Change** 431
- CHAPTER REVIEW 432

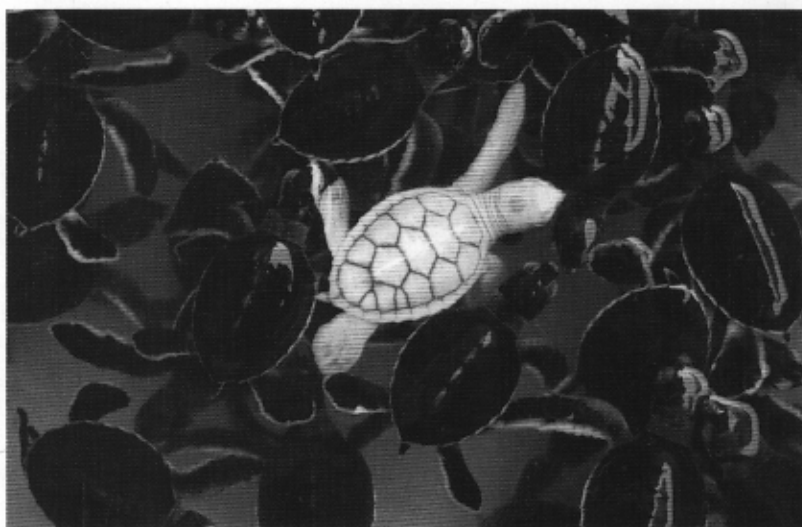

## UNIT 4 EVOLUTIONARY PATTERNS AND PROCESSES 435

### 22 Evolution by Natural Selection 435

- 22.1 The Rise of Evolutionary Thought** 436
  - Plato and Typological Thinking 436
  - Aristotle and the Scale of Nature 436
  - Lamarck and the Idea of Evolution as Change through Time 437
  - Darwin and Wallace and Evolution by Natural Selection 437
- 22.2 The Pattern of Evolution: Have Species Changed, and Are They Related?** 437
  - Evidence for Change through Time 437
  - Evidence of Descent from a Common Ancestor 440
  - Evolution's "Internal Consistency"—The Importance of Independent Data Sets 443
- 22.3 The Process of Evolution: How Does Natural Selection Work?** 445
  - Darwin's Inspiration 445
  - Darwin's Four Postulates 445
  - The Biological Definitions of Fitness, Adaptation, and Selection 446
- 22.4 Evolution in Action: Recent Research on Natural Selection** 446
  - Case Study 1: How Did *Mycobacterium tuberculosis* Become Resistant to Antibiotics? 446
  - Case Study 2: Why Do Beak Sizes and Shapes Vary in Galápagos Finches? 448
- 22.5 Debunking Common Myths about Natural Selection and Adaptation** 451
  - Natural Selection Does Not Change Individuals 451
  - Natural Selection Is Not Goal Directed 452
  - Natural Selection Does Not Lead to Perfection 453
- CHAPTER REVIEW 454

### 23 Evolutionary Processes 456

- 23.1 Analyzing Change in Allele Frequencies: The Hardy–Weinberg Principle** 457
  - The Gene Pool Concept 457
  - Quantitative Methods 23.1 Deriving the Hardy–Weinberg Principle 458
  - The Hardy–Weinberg Principle Makes Important Assumptions 458
  - How Do Biologists Apply the Hardy–Weinberg Principle to Real Populations? 459
- 23.2 Nonrandom Mating** 461
  - How Does Inbreeding Affect Allele Frequencies and Genotype Frequencies? 461

How Does Inbreeding Influence Evolution? 462

- 23.3 Natural Selection** 462
  - How Does Selection Affect Genetic Variation? 462
  - Sexual Selection 466
- 23.4 Genetic Drift** 469
  - Simulation Studies of Genetic Drift 469
  - Experimental Studies of Genetic Drift 470
  - What Causes Genetic Drift in Natural Populations? 472
- 23.5 Gene Flow** 473
  - Measuring Gene Flow between Populations 473
  - Gene Flow Is Random with Respect to Fitness 474
- 23.6 Mutation** 475
  - Mutation as an Evolutionary Process 475
  - Experimental Studies of Mutation 475
  - Studies of Mutation in Natural Populations 476
  - Take-Home Messages 477
- CHAPTER REVIEW 478

### 24 Speciation 480

- 24.1 How are Species Defined and Identified?** 481
  - The Biological Species Concept 481
  - The Morphospecies Concept 482
  - The Phylogenetic Species Concept 482
  - Species Definitions in Action: The Case of the Dusky Seaside Sparrow 484
- 24.2 Isolation and Divergence in Allopatry** 485
  - Allopatric Speciation by Dispersal 485
  - Allopatric Speciation by Vicariance 486
- 24.3 Isolation and Divergence in Sympatry** 487
  - Sympatric Speciation by Disruptive Selection 487
  - Sympatric Speciation by Polyploidization 489
- 24.4 What Happens When Isolated Populations Come into Contact?** 491
  - Reinforcement 491
  - Hybrid Zones 491
  - New Species through Hybridization 492
- CHAPTER REVIEW 493

## 25 Phylogenies and the History of Life 496

- 25.1 Tools for Studying History: Phylogenetic Trees 497**
  - How Do Biologists Estimate Phylogenies? 498
  - How Can Biologists Distinguish Homology from Homoplasy? 500
  - Whale Evolution: A Case Study 501
- 25.2 Tools for Studying History: The Fossil Record 503**
  - How Do Fossils Form? 503
  - Limitations of the Fossil Record 504
  - Life's Time Line 504
- 25.3 Adaptive Radiation 507**
  - Why Do Adaptive Radiations Occur? 507
  - The Cambrian Explosion 509
- 25.4 Mass Extinction 511**
  - How Do Mass Extinctions Differ from Background Extinctions? 511
  - The End-Permian Extinction 511
  - The End-Cretaceous Extinction 512
  - The Sixth Mass Extinction? 513
- CHAPTER REVIEW 513**
- BIG PICTURE Evolution 516**

### UNIT 5 THE DIVERSIFICATION OF LIFE 518

## 26 Bacteria and Archaea 518

- 26.1 Why Do Biologists Study Bacteria and Archaea? 519**
  - Biological Impact 519
  - Some Prokaryotes Thrive in Extreme Environments 519
  - Medical Importance 520
  - Role in Bioremediation 522
- 26.2 How Do Biologists Study Bacteria and Archaea? 523**
  - Using Enrichment Cultures 523
  - Using Metagenomics 524

- Investigating the Human Microbiome 524
- Evaluating Molecular Phylogenies 524

- 26.3 What Themes Occur in the Diversification of Bacteria and Archaea? 525**
  - Genetic Variation through Gene Transfer 525
  - Morphological Diversity 526
  - Metabolic Diversity 528
  - Ecological Diversity and Global Impacts 531
- 26.4 Key Lineages of Bacteria and Archaea 534**
  - Bacteria 534
  - Archaea 534
- CHAPTER REVIEW 537**

## 27 Protists 539

- 27.1 Why Do Biologists Study Protists? 540**
  - Impacts on Human Health and Welfare 540
  - Ecological Importance of Protists 542
- 27.2 How Do Biologists Study Protists? 543**
  - Microscopy: Studying Cell Structure 544
  - Evaluating Molecular Phylogenies 544
  - Discovering New Lineages via Direct Sequencing 545
- 27.3 What Themes Occur in the Diversification of Protists? 546**
  - What Morphological Innovations Evolved in Protists? 546
  - How Do Protists Obtain Food? 551
  - How Do Protists Move? 552
  - How Do Protists Reproduce? 552
- 27.4 Key Lineages of Protists 556**
  - Amoebozoa 556
  - Excavata 556
  - Plantae 556
  - Rhizaria 556
  - Alveolata 558
  - Stramenopila (Heterokonta) 558
- CHAPTER REVIEW 558**

## 28 Green Algae and Land Plants 561

- 28.1 Why Do Biologists Study Green Algae and Land Plants? 562**
  - Plants Provide Ecosystem Services 562
  - Plants Provide Humans with Food, Fuel, Fiber, Building Materials, and Medicines 563
- 28.2 How Do Biologists Study Green Algae and Land Plants? 564**
  - Analyzing Morphological Traits 564
  - Using the Fossil Record 565
  - Evaluating Molecular Phylogenies 566
- 28.3 What Themes Occur in the Diversification of Land Plants? 568**
  - The Transition to Land, I: How Did Plants Adapt to Dry Conditions with Intense Sunlight? 568
  - Mapping Evolutionary Changes on the Phylogenetic Tree 571
  - The Transition to Land, II: How Do Plants Reproduce in Dry Conditions? 571
  - The Angiosperm Radiation 580
- 28.4 Key Lineages of Green Algae and Land Plants 581**
  - Green Algae 581

Nonvascular Plants 582  
Seedless Vascular Plants 582  
Seed Plants: Gymnosperms and Angiosperms 582  
CHAPTER REVIEW 588

## 29 Fungi 590

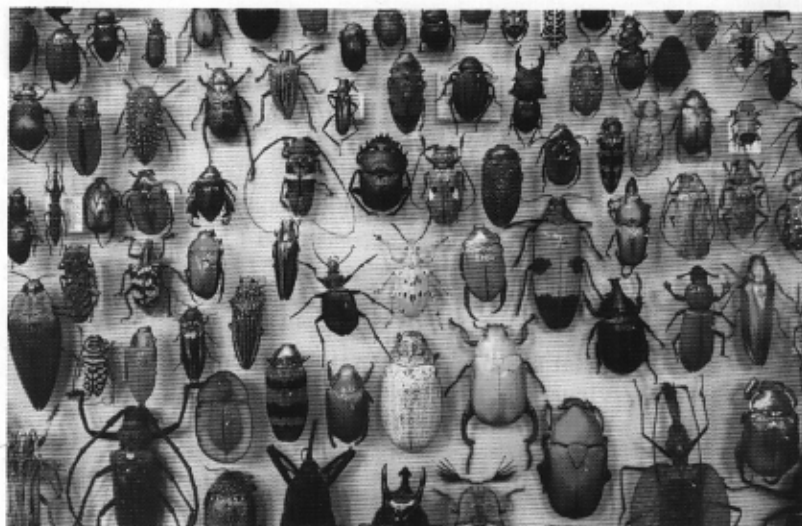

- 29.1 Why Do Biologists Study Fungi?** 591  
Fungi Have Important Economic and Ecological Impacts 591  
Mycorrhizal Fungi Provide Nutrients for Land Plants 592  
Saprophytic Fungi Accelerate the Carbon Cycle on Land 593
- 29.2 How Do Biologists Study Fungi?** 593  
Analyzing Morphological Traits 594  
Evaluating Molecular Phylogenies 596
- 29.3 What Themes Occur in the Diversification of Fungi?** 598  
Fungi Often Participate in Symbioses 599  
What Adaptations Make Fungi Such Effective Decomposers? 602  
Variation in Reproduction 603  
Four Major Types of Life Cycles 605
- 29.4 Key Lineages of Fungi** 608  
Microsporidia 608  
Chytrids 609  
Zygomycetes 609  
Glomeromycota 610  
Basidiomycota 610  
Ascomycota 610  
CHAPTER REVIEW 610

## 30 An Introduction to Animals 613

- 30.1 What Is an Animal?** 614
- 30.2 What Key Innovations Occurred during the Origin of Animal Phyla?** 615  
Origin of Multicellularity 616  
Origin of Embryonic Tissue Layers and Muscle 618  
Origin of Bilateral Symmetry, Cephalization, and the Nervous System 619  
Origin of the Coelom 621  
Origin of Protostomes and Deuterostomes 622  
Origin of Segmentation 623
- 30.3 What Themes Occur in the Diversification of Animals within Phyla?** 623  
Sensory Organs 624  
Feeding 625  
Movement 626  
Reproduction 628  
Life Cycles 629
- 30.4 Key Lineages of Animals: Non-Bilaterian Groups** 630  
Porifera (Sponges) 630  
Ctenophora (Comb Jellies) 631  
Cnidaria (Jellyfish, Corals, Anemones, Hydroids) 631  
CHAPTER REVIEW 632

## 31 Protostome Animals 634

- 31.1 What Is a Protostome?** 635  
The Water-to-Land Transition 636  
Modular Body Plans 637

- 31.2 What Is a Lophotrochozoan?** 637  
What Is a Flatworm? 640  
What Is a Segmented Worm? 641  
What Is a Mollusk? 641
- 31.3 What Is an Ecdysozoan?** 644  
What Is a Roundworm? 645  
What Are Tardigrades and Velvet Worms? 645  
What Is an Arthropod? 645  
Arthropod Diversity 648  
Arthropod Metamorphosis 652  
CHAPTER REVIEW 653

## 32 Deuterostome Animals 655

- 32.1 What Is an Echinoderm?** 656  
The Echinoderm Body Plan 656  
Echinoderms Are Important Consumers 657
- 32.2 What Is a Chordate?** 659  
The Cephalochordates 660  
The Urochordates 660  
The Vertebrates 661
- 32.3 What Is a Vertebrate?** 661
- 32.4 What Key Innovations Occurred during the Evolution of Vertebrates?** 662  
Urochordates: Outgroup to Vertebrates 662  
First Vertebrates: Origin of the Cranium and Vertebrae 664  
Gnathostomes: Origin of the Vertebrate Jaw 665  
Origin of the Bony Endoskeleton 667  
Tetrapods: Origin of the Limb 667  
Amniotes: Origin of the Amniotic Egg 668  
Mammals: Origin of Lactation and Fur 669  
Reptiles: Origin of Scales and Feathers Made of Keratin 670  
Parental Care 672  
Take-Home Messages 673
- 32.5 The Primates and Hominins** 673  
The Primates 673  
Fossil Humans 675  
The Out-of-Africa Hypothesis 678  
Have Humans Stopped Evolving? 679  
CHAPTER REVIEW 680

## 33 Viruses 682

- 33.1 Why Do Biologists Study Viruses?** 683
  - Viruses Shape the Evolution of Organisms 683
  - Viruses Cause Disease 683
  - Current Viral Pandemics in Humans: AIDS 683
- 33.2 How Do Biologists Study Viruses?** 685
  - Analyzing Morphological Traits 686
  - Analyzing the Genetic Material 686
  - Analyzing the Phases of Replicative Growth 687
  - Analyzing How Viruses Coexist with Host Cells 693
- 33.3 What Themes Occur in the Diversification of Viruses?** 694
  - Where Did Viruses Come From? 694
  - Emerging Viruses, Emerging Diseases 694
- 33.4 Key Lineages of Viruses** 696
- CHAPTER REVIEW 700

**BIG** Diversity of Life 702

### UNIT 6

#### HOW PLANTS WORK 704

## 34 Plant Form and Function 704

- 34.1 Plant Form: Themes with Many Variations** 705
  - The Importance of Surface Area/Volume Relationships 706
  - The Root System 707
  - The Shoot System 708
  - The Leaf 710
- 34.2 Plant Cells and Tissue Systems** 713
  - The Dermal Tissue System 714
  - The Ground Tissue System 714
  - The Vascular Tissue System 716
- 34.3 Primary Growth Extends the Plant Body** 718
  - How Do Apical Meristems Produce the Primary Plant Body? 718
  - How Is the Primary Root System Organized? 720
  - How Is the Primary Shoot System Organized? 720
- 34.4 Secondary Growth Widens Shoots and Roots** 721
  - What Is a Cambium? 721

- How Does a Cambium Initiate Secondary Growth? 722
- What Do Vascular Cambia Produce? 723
- What Do Cork Cambia Produce? 724
- The Structure of Tree Trunks 724

CHAPTER REVIEW 725

## 35 Water and Sugar Transport in Plants 727

- 35.1 Water Potential and Water Movement** 728
  - What Is Water Potential? 728
  - What Factors Affect Water Potential? 728
  - Working with Water Potentials 729
  - Water Potentials in Soils, Plants, and the Atmosphere 730
- 35.2 How Does Water Move from Roots to Shoots?** 732
  - Movement of Water and Solutes into the Root 732
  - Water Movement via Root Pressure 733
  - Water Movement via Capillary Action 734
  - The Cohesion-Tension Theory 734
- 35.3 Plant Features That Reduce Water Loss** 737
  - Limiting Water Loss 737
  - Obtaining Carbon Dioxide under Water Stress 738
- 35.4 Translocation of Sugars** 738
  - Tracing Connections between Sources and Sinks 738
  - The Anatomy of Phloem 740
  - The Pressure-Flow Hypothesis 740
  - Phloem Loading 741
  - Phloem Unloading 744
- CHAPTER REVIEW 745

## 36 Plant Nutrition 747

- 36.1 Nutritional Requirements of Plants** 748
  - Which Nutrients Are Essential? 748
  - What Happens When Key Nutrients Are in Short Supply? 750
- 36.2 Soil: A Dynamic Mixture of Living and Nonliving Components** 751
  - The Importance of Soil Conservation 751
  - What Factors Affect Nutrient Availability? 752
- 36.3 Nutrient Uptake** 754
  - Mechanisms of Nutrient Uptake 754
  - Mechanisms of Ion Exclusion 756
- 36.4 Nitrogen Fixation** 758
  - The Role of Symbiotic Bacteria 759
  - How Do Nitrogen-Fixing Bacteria Infect Plant Roots? 759
- 36.5 Nutritional Adaptations of Plants** 760
  - Parasitic Plants 760
  - Epiphytic Plants 761
  - Carnivorous Plants 762
- CHAPTER REVIEW 762

## 37 Plant Sensory Systems, Signals, and Responses 765

- 37.1 Information Processing in Plants** 766

How Do Cells Receive and Process an External Signal? 766  
How Do Cells Respond to Cell–Cell Signals? 766

- 37.2 Blue Light: The Phototropic Response** 768  
Phototropins as Blue-Light Receptors 768  
Auxin as the Phototropic Hormone 769
- 37.3 Red and Far-Red Light: Germination, Stem Elongation, and Flowering** 772  
The Red/Far-Red “Switch” 772  
Phytochrome Is a Red/Far-Red Receptor 772  
Signals That Promote Flowering 773
- 37.4 Gravity: The Gravitropic Response** 775  
The Statolith Hypothesis 775  
Auxin as the Gravitropic Signal 776
- 37.5 How Do Plants Respond to Wind and Touch?** 777  
Changes in Growth Patterns 777  
Movement Responses 777
- 37.6 Youth, Maturity, and Aging: The Growth Responses** 778  
Auxin and Apical Dominance 778  
Cytokinins and Cell Division 779  
Gibberellins and ABA: Growth and Dormancy 779  
Brassinosteroids and Body Size 782  
Ethylene and Senescence 783  
An Overview of Plant Growth Regulators 784
- 37.7 Pathogens and Herbivores: The Defense Responses** 786  
How Do Plants Sense and Respond to Pathogens? 786  
How Do Plants Sense and Respond to Herbivore Attack? 788  
CHAPTER REVIEW 790

## 38 Plant Reproduction and Development 793

- 38.1 An Introduction to Plant Reproduction** 794  
Asexual Reproduction 794  
Sexual Reproduction and the Plant Life Cycle 795
- 38.2 Reproductive Structures** 796  
The General Structure of the Flower 796  
How Are Female Gametophytes Produced? 797  
How Are Male Gametophytes Produced? 798
- 38.3 Pollination and Fertilization** 799  
Pollination 799  
Fertilization 802
- 38.4 Seeds and Fruits** 802  
The Role of Drying in Seed Maturation 803  
Fruit Development and Seed Dispersal 803  
Seed Dormancy 805  
Seed Germination 806
- 38.5 Embryogenesis and Vegetative Development** 807  
Embryogenesis 807  
Meristem Formation 808  
Which Genes Determine Body Axes in the Plant Embryo? 809  
Which Genes Determine Leaf Structure and Shape? 810
- 38.6 Reproductive Development** 810  
The Floral Meristem and the Flower 811  
The Genetic Control of Flower Structures 811  
CHAPTER REVIEW 813

**BIG** Plant and Animal Form and Function 816

## UNIT 7 HOW ANIMALS WORK 818

## 39 Animal Form and Function 818

- 39.1 Form, Function, and Adaptation** 819  
The Role of Fitness Trade-Offs 819  
Adaptation and Acclimatization 821
- 39.2 Tissues, Organs, and Systems: How Does Structure Correlate with Function?** 821  
Structure–Function Relationships at the Molecular and Cellular Levels 822  
Tissues Are Groups of Cells That Function as a Unit 822  
Organs and Organ Systems 825
- 39.3 How Does Body Size Affect Animal Physiology?** 826  
Surface Area/Volume Relationships: Theory 826  
Surface Area/Volume Relationships: Data 827  
Adaptations That Increase Surface Area 828
- 39.4 Homeostasis** 829  
Homeostasis: General Principles 829  
The Role of Regulation and Feedback 830
- 39.5 Thermoregulation: A Closer Look** 831  
Mechanisms of Heat Exchange 831  
Thermoregulatory Strategies 832  
Comparing Endothermy and Ectothermy 832  
Countercurrent Heat Exchangers 833  
CHAPTER REVIEW 834

## 40 Water and Electrolyte Balance in Animals 836

- 40.1 Osmoregulation and Excretion** 837  
What Is Osmotic Stress? 837  
Osmotic Stress in Seawater, in Freshwater, and on Land 837  
How Do Electrolytes and Water Move across Cell Membranes? 839  
Types of Nitrogenous Wastes: Impact on Water Balance 839
- 40.2 Water and Electrolyte Balance in Marine Fishes** 840

Osmoconformation versus Osmoregulation in Marine Fishes 840  
How Do Sharks Excrete Salt? 840

#### 40.3 Water and Electrolyte Balance in Freshwater Fishes 841

How Do Freshwater Fishes Osmoregulate? 841

#### 40.4 Water and Electrolyte Balance in Terrestrial Insects 842

How Do Insects Minimize Water Loss from the Body Surface? 843

#### 40.5 Water and Electrolyte Balance in Terrestrial Vertebrates 844

The Structure of the Mammalian Kidney 844

The Function of the Mammalian Kidney: An Overview 845

Filtration: The Renal Corpuscle 846

Reabsorption: The Proximal Tubule 846

Creating an Osmotic Gradient: The Loop of Henle 847

Regulating Water and Electrolyte Balance: The Distal Tubule and Collecting Duct 850

Urine Formation in Nonmammalian Vertebrates 851

CHAPTER REVIEW 852

### 41 Animal Nutrition 855

#### 41.1 Nutritional Requirements 856

#### 41.2 Capturing Food: The Structure and Function of Mouthparts 858

Mouthparts as Adaptations 858

A Case Study: The Cichlid Throat Jaw 858

#### 41.3 How Are Nutrients Digested and Absorbed? 859

An Introduction to the Digestive Tract 859

An Overview of Digestive Processes 860

The Mouth and Esophagus 861

The Stomach 862

The Small Intestine 864

The Large Intestine 868

#### 41.4 Nutritional Homeostasis—Glucose as a Case Study 869

The Discovery of Insulin 869

Insulin's Role in Homeostasis 870

Diabetes Mellitus Has Two Forms 870

The Type 2 Diabetes Mellitus Epidemic 870

CHAPTER REVIEW 871

### 42 Gas Exchange and Circulation 874

#### 42.1 The Respiratory and Circulatory Systems 875

#### 42.2 Air and Water as Respiratory Media 875

How Do Oxygen and Carbon Dioxide Behave in Air? 875

How Do Oxygen and Carbon Dioxide Behave in Water? 876

#### 42.3 Organs of Gas Exchange 877

Physical Parameters: The Law of Diffusion 877

How Do Gills Work? 878

How Do Insect Tracheae Work? 879

How Do Vertebrate Lungs Work? 881

Homeostatic Control of Ventilation 883

#### 42.4 How Are Oxygen and Carbon Dioxide Transported in Blood? 884

Structure and Function of Hemoglobin 884

CO<sub>2</sub> Transport and the Buffering of Blood pH 887

#### 42.5 Circulation 888

What Is an Open Circulatory System? 889

What Is a Closed Circulatory System? 889

How Does the Heart Work? 891

Patterns in Blood Pressure and Blood Flow 895

CHAPTER REVIEW 897

### 43 Animal Nervous Systems 899

#### 43.1 Principles of Electrical Signaling 900

Types of Neurons 900

The Anatomy of a Neuron 901

An Introduction to Membrane Potentials 901

How Is the Resting Potential Maintained? 902

Using Electrodes to Measure Membrane Potentials 903

What Is an Action Potential? 903

#### 43.2 Dissecting the Action Potential 904

Distinct Ion Currents Are Responsible for Depolarization and Repolarization 904

How Do Voltage-Gated Channels Work? 904

How Is the Action Potential Propagated? 905

#### 43.3 The Synapse 908

Synapse Structure and Neurotransmitter Release 908

What Do Neurotransmitters Do? 910

Postsynaptic Potentials 910

#### 43.4 The Vertebrate Nervous System 912

What Does the Peripheral Nervous System Do? 912

Functional Anatomy of the CNS 913

How Do Learning and Memory Work? 917

CHAPTER REVIEW 919

### 44 Animal Sensory Systems 922

#### 44.1 How Do Sensory Organs Convey Information to the Brain? 923

Sensory Transduction 923

Transmitting Information to the Brain 924

#### 44.2 Mechanoreception: Sensing Pressure Changes 924

How Do Sensory Cells Respond to Sound Waves and Other

Forms of Pressure? 924

Hearing: The Mammalian Ear 925

The Lateral Line System in Fishes and Amphibians 928

#### 44.3 Photoreception: Sensing Light 929

The Insect Eye 929

The Vertebrate Eye 930

#### 44.4 Chemoreception: Sensing Chemicals 934

Taste: Detecting Molecules in the Mouth 934

Olfaction: Detecting Molecules in the Air 935

#### 44.5 Other Sensory Systems 937

Thermoreception: Sensing Temperature 937

Electroreception: Sensing Electric Fields 938

Magnetoreception: Sensing Magnetic Fields 939

CHAPTER REVIEW 939

## 45 Animal Movement 942

#### 45.1 How Do Muscles Contract? 943

Early Muscle Experiments 943

The Sliding-Filament Model 943

How Do Actin and Myosin Interact? 944

How Do Neurons Initiate Contraction? 946

#### 45.2 Muscle Tissues 947

Smooth Muscle 947

Cardiac Muscle 948

Skeletal Muscle 948

#### 45.3 Skeletal Systems 950

Hydrostatic Skeletons 951

Endoskeletons 952

Exoskeletons 953

#### 45.4 Locomotion 954

How Do Biologists Study Locomotion? 954

Size Matters 957

CHAPTER REVIEW 958

## 46 Chemical Signals in Animals 961

#### 46.1 Cell-to-Cell Signaling: An Overview 962

Major Categories of Chemical Signals 962

Hormone Signaling Pathways 963

What Makes Up the Endocrine System? 964

How Do Researchers Identify a Hormone? 965

A Breakthrough in Measuring Hormone Levels 965

#### 46.2 How Do Hormones Act on Target Cells? 966

Hormone Concentrations Are Low, but Their Effects Are Large 966

Three Chemical Classes of Hormones 967

Steroid Hormones Bind to Intracellular Receptors 967

Polypeptide Hormones Bind to Receptors on the Plasma Membrane 968

Why Do Different Target Cells Respond in Different Ways? 970

#### 46.3 What Do Hormones Do? 971

How Do Hormones Direct Developmental Processes? 971

How Do Hormones Coordinate Responses to Stressors? 973

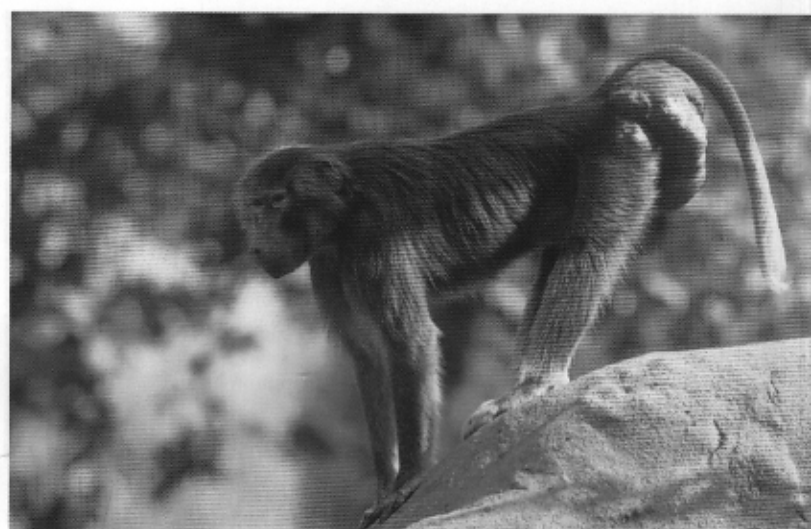

How Are Hormones Involved in Homeostasis? 975

#### 46.4 How Is the Production of Hormones Regulated? 976

The Hypothalamus and Pituitary Gland 976

Control of Epinephrine by Sympathetic Nerves 978

CHAPTER REVIEW 978

## 47 Animal Reproduction and Development 981

#### 47.1 Asexual and Sexual Reproduction 982

How Does Asexual Reproduction Occur? 982

Switching Reproductive Modes: A Case History 982

Mechanisms of Sexual Reproduction: Gametogenesis 984

#### 47.2 Reproductive Structures and Their Functions 986

The Male Reproductive System 986

The Female Reproductive System 987

#### 47.3 Fertilization and Egg Development 989

External Fertilization 989

Internal Fertilization 989

The Cell Biology of Fertilization 991

Why Do Some Females Lay Eggs While Others Give Birth? 992

#### 47.4 Embryonic Development 994

Cleavage 994

Gastrulation 995

Organogenesis 996

#### 47.5 The Role of Sex Hormones in Mammalian Reproduction 999

Which Hormones Control Puberty? 999

Which Hormones Control the Menstrual Cycle in Humans? 1000

#### 47.6 Pregnancy and Birth in Mammals 1002

Gestation and Development in Marsupials 1003

Major Events during Human Pregnancy 1003

How Does the Mother Nourish the Fetus? 1004

Birth 1005

CHAPTER REVIEW 1005

## 48 The Immune System in Animals 1008

#### 48.1 Innate Immunity 1009

Barriers to Entry 1009

The Innate Immune Response 1010

#### 48.2 Adaptive Immunity: Recognition 1013

An Introduction to Lymphocytes 1013

Lymphocytes Recognize a Diverse Array of Antigens 1014  
How Does the Immune System Distinguish Self from  
Nonself? 1017

- 48.3 Adaptive Immunity: Activation** 1018  
The Clonal Selection Theory 1018  
T-Cell Activation 1019  
B-Cell Activation and Antibody Secretion 1020
- 48.4 Adaptive Immunity: Response and Memory** 1022  
How Are Extracellular Pathogens Eliminated? 1022  
How Are Intracellular Pathogens Eliminated? 1023  
Why Does the Immune System Reject Foreign Tissues and  
Organs? 1024  
Responding to Future Infections: Immunological  
Memory 1024
- 48.5 What Happens When the Immune System Doesn't  
Work Correctly?** 1025  
Allergies 1026  
Autoimmune Diseases 1026  
Immunodeficiency Diseases 1026  
CHAPTER REVIEW 1027

UNIT  
8 ECOLOGY 1029

## 49 An Introduction to Ecology 1029

- 49.1 Levels of Ecological Study** 1030  
Organismal Ecology 1030  
Population Ecology 1031  
Community Ecology 1031  
Ecosystem Ecology 1031  
Global Ecology 1031  
Conservation Biology Applies All Levels of Ecological Study 1031
- 49.2 What Determines the Distribution and Abundance  
of Organisms?** 1031  
Abiotic Factors 1032  
Biotic Factors 1032  
History Matters: Past Abiotic and Biotic Factors Influence  
Present Patterns 1033  
Biotic and Abiotic Factors Interact 1034
- 49.3 Climate Patterns** 1036  
Why Are the Tropics Warm and the Poles Cold? 1036

Why Are the Tropics Wet? 1036  
What Causes Seasonality in Weather? 1036  
What Regional Effects Do Mountains and Oceans Have  
on Climate? 1038

- 49.4 Types of Terrestrial Biomes** 1039  
Natural Biomes 1039  
Anthropogenic Biomes 1040  
How Will Global Climate Change Affect Terrestrial  
Biomes? 1042
- 49.5 Types of Aquatic Biomes** 1043  
Salinity 1043  
Water Depth and Sunlight Availability 1044  
Water Flow 1045  
Nutrient Availability 1045  
How Are Aquatic Biomes Affected by Humans? 1048  
CHAPTER REVIEW 1048

## 50 Behavioral Ecology 1051

- 50.1 An Introduction to Behavioral Ecology** 1052  
Proximate and Ultimate Causation 1052  
Types of Behavior: An Overview 1053
- 50.2 Choosing What, How, and When to Eat** 1054  
Proximate Causes: Foraging Alleles in *Drosophila*  
*melanogaster* 1054  
Ultimate Causes: Optimal Foraging 1054
- 50.3 Choosing a Mate** 1056  
Proximate Causes: How Is Sexual Activity Triggered  
in *Anolis* Lizards? 1056  
Ultimate Causes: Sexual Selection 1057
- 50.4 Choosing a Place to Live** 1058  
Proximate Causes: How Do Animals Navigate? 1058  
Ultimate Causes: Why Do Animals Migrate? 1060
- 50.5 Communicating with Others** 1061  
Proximate Causes: How Do Honeybees Communicate? 1061  
Ultimate Causes: Why Do Honeybees Communicate  
the Way They Do? 1062  
When Is Communication Honest or Deceitful? 1063
- 50.6 Cooperating with Others** 1064  
Kin Selection 1064  
Quantitative Methods 50.1 Calculating the Coefficient  
of Relatedness 1065  
Manipulation 1066  
Reciprocal Altruism 1067  
Cooperation and Mutualism 1067  
Individuals Do Not Act for the Good of the Species 1067  
CHAPTER REVIEW 1068

## 51 Population Ecology 1070

- 51.1 Distribution and Abundance** 1071  
Geographic Distribution 1071  
Sampling Methods 1072
- 51.2 Demography** 1072  
Life Tables 1072  
Quantitative Methods 51.1 Mark-Recapture Studies 1073  
The Role of Life History 1075  
Quantitative Methods 51.2 Using Life Tables to Calculate  
Population Growth Rates 1075

- 51.3 Population Growth** 1076  
 Exponential Growth 1077  
 Quantitative Methods 51.3 Using Growth Models to Predict Population Growth 1078  
 Logistic Growth 1079  
 What Factors Limit Population Size? 1080
- 51.4 Population Dynamics** 1081  
 Why Do Some Populations Cycle? 1081  
 How Do Metapopulations Change through Time? 1083
- 51.5 Human Population Growth** 1084  
 Age Structure in Human Populations 1084  
 Analyzing Change in the Growth Rate of Human Populations 1085
- 51.6 How Can Population Ecology Help Conserve Biodiversity?** 1087  
 Using Life-Table Data 1087  
 Preserving Metapopulations 1088
- CHAPTER REVIEW 1090

## 52 Community Ecology 1092

- 52.1 Species Interactions** 1093  
 Commensalism 1093  
 Competition 1094  
 Consumption 1098  
 Mutualism 1101
- 52.2 Community Structure** 1103  
 Why Are Some Species More Important than Others in Structuring Communities? 1104  
 How Predictable Are Communities? 1105
- 52.3 Community Dynamics** 1107  
 Disturbance and Change in Ecological Communities 1107  
 Succession: The Development of Communities after Disturbance 1108
- 52.4 Patterns in Species Richness** 1111  
 Quantitative Methods 52.1 Measuring Species Diversity 1111  
 Predicting Species Richness: The Theory of Island Biogeography 1112  
 Global Patterns in Species Richness 1113
- CHAPTER REVIEW 1114

## 53 Ecosystems and Global Ecology 1116

- 53.1 How Does Energy Flow through Ecosystems?** 1117  
 How Efficient Are Autotrophs at Capturing Solar Energy? 1117  
 What Happens to the Biomass of Autotrophs? 1118  
 Energy Transfer between Trophic Levels 1119  
 Global Patterns in Productivity 1121
- 53.2 How Do Nutrients Cycle through Ecosystems?** 1123  
 Nutrient Cycling within Ecosystems 1123  
 Global Biogeochemical Cycles 1125

- 53.3 Global Climate Change** 1129  
 What Is the Cause of Global Climate Change? 1130  
 How Much Will the Climate Change? 1131  
 Biological Effects of Climate Change 1133  
 Consequences to Net Primary Productivity 1135
- CHAPTER REVIEW 1137

## 54 Biodiversity and Conservation Biology 1139

- 54.1 What Is Biodiversity?** 1140  
 Biodiversity Can Be Measured and Analyzed at Several Levels 1140  
 How Many Species Are Living Today? 1142  
 Where Is Biodiversity Highest? 1142
- 54.2 Threats to Biodiversity** 1145  
 Multiple Interacting Threats 1145  
 How Will These Threats Affect Future Extinction Rates? 1149  
 Quantitative Methods 54.1 Species-Area Plots 1150
- 54.3 Why Is Biodiversity Important?** 1152  
 Biological Benefits of Biodiversity 1152  
 Ecosystem Services: Economic and Social Benefits of Biodiversity and Ecosystems 1154  
 An Ethical Dimension 1155
- 54.4 Preserving Biodiversity and Ecosystem Function** 1156  
 Addressing the Ultimate Causes of Loss 1156  
 Conservation Strategies to Preserve Genetic Diversity, Species, and Ecosystem Function 1157  
 Take-Home Message 1159
- CHAPTER REVIEW 1159

**BIG** Ecology 1162

APPENDIX A Answers A:1

APPENDIX B Periodic Table of Elements B:1
