Contributors xiii
Preface xvii

1. Gamete activation for fertilization and seed development in flowering plants 1

Wei Wang, Hanxian Xiong, and Meng-Xiang Sun

1. Introduction 1
2. Sperm cell activation 4
   - 2.1 Peri-germ cell membrane release and cell wall degradation 4
   - 2.2 Gain of adhesion and fusion competence-four fertilization essential proteins 7
3. Egg cell activation 12
   - 3.1 Egg cell activation before fertilization 12
   - 3.2 Egg cell activation at fertilization 14
   - 3.3 Egg cell activation after karyogamy 15
4. Initiation of endosperm proliferation 19
5. Conclusion 21

Acknowledgment 22
References 22

2. Cytoskeletal dynamics of gamete nuclear migration in flowering plants, animals, and yeast 33

Yilin Zhang and Tomokazu Kawashima

1. Introduction 34
2. Sperm nuclear migration in flowering plants 35
   - 2.1 F-actin is essential for sperm nuclear migration in both the egg cell and central cell 36
   - 2.2 Formins, but not ARP2/3, contribute to F-actin assembly in female gametes 37
   - 2.3 ROPs and WAVE/SCAR promote F-actin movement in an ARP2/3-independent manner 37
   - 2.4 Class XI myosin XI-G is involved in the sperm nuclear migration in *Arabidopsis* central cell 38
   - 2.5 Calcium concentration levels are associated with the speed of actin meshwork movement 39
3. Pronuclear migration in animals 40

3.1 Microtubules drive the migration of male and female pronuclei 40
3.2 Both actin filaments and microtubules are involved in pronuclear migration in mice 42
3.3 The interaction between SUN-domain and KASH-domain proteins, dependent on kinesin or dynein, is required for pronuclear migration 44
4. Nuclear migration in yeast 45
4.1 Spc72 interacts with Kar1 and Kar3 to generate the microtubule-spindle pole body complex and facilitate movement along microtubules 45
5. Conclusion 47
References 48

3. Fertilization mechanisms in hermaphroditic ascidians and nematodes: Common mechanisms with mammals and plants **55**

Hitoshi Sawada, Takako Saito, Yoshihiro Shimada, and Hitoshi Nishimura

1. Introduction 56
2. Fertilization mechanisms in ascidians: Comparison with echinoderms, mammals and plants 59
2.1 Sperm chemotaxis 59
2.2 Sperm binding to the egg coat 62
2.3 Sperm AR or sperm reaction 71
2.4 Sperm penetration of the egg coat 74
2.5 Gamete fusion 77
2.6 Polyspermy block 80
3. Fertilization mechanisms in nematodes: Comparison with mammals 81
3.1 *C. elegans* genes belonging to the *spe* category 84
3.2 *C. elegans* genes related to female germline functions 98
4. Conclusions and perspectives 99
Acknowledgments 99
References 100

4. Activating the *C. elegans* egg: Molecular players, current knowledge, and unanswered questions **115**

Aimee Jaramillo-Lambert and Amber R. Krauchunas

1. Introduction 115
2. List of key genes 116
3. Calcium waves and zinc fluxes 117

4. Completion of meiosis 120
5. Localization of the EGG complex 123
6. The *C. elegans* eggshell 125
7. Block to polyspermy 128
8. Cortical granule exocytosis in *C. elegans* 131
9. Regulation of maternal RNAs and proteins 132
10. Conclusions 135
References 135

5. Fertilization and the fast block to polyspermy in the African Clawed Frog, *Xenopus laevis*: A historical perspective **143**

Kayla M. Komondor and Anne E. Carlson

1. Introduction 144
2. Mating system 145
3. Sperm and egg interaction 147
4. Polyspermy is embryonic lethal for most animals 148
5. Fast block to polyspermy 149
6. Fast block mechanism 151
7. Signaling pathway of the fast block in *X. laevis* 152
8. Concluding remarks 157
References 157

6. No transcription, no problem: Protein phosphorylation changes and the transition from oocyte to embryo **165**

Jonathon M. Thomalla and Mariana F. Wolfner

1. Background, outstanding questions, and emerging research 166
   - 1.1 What is egg activation? 166
   - 1.2 How does a cell/oocyte regulate cell state change without transcription? 167
2. Post-translational modifications as regulators of egg activation 169
3. Conserved events related to phospho-regulation during egg activation 172
   - 3.1 General trends in protein/phospho-site dynamics 172
   - 3.2 Translation and RNA handling 175
   - 3.3 Meiosis and spindle regulation 180
   - 3.4 Cytoskeletal remodeling 181
   - 3.5 Nuclear architecture 185

4. Kinases and phosphatases that regulate maternal phospho-proteins during egg activation 187
4.1 What triggers egg activation? 187
4.2 How does elevated calcium trigger egg activation? 188
5. Summary and future directions 193
5.1 Conservation of phospho-regulation during egg activation 193
5.2 Development of new tools to assess phospho-dynamics 194
5.3 Functional dissection of phospho-regulated proteins 195
5.4 Broader applications of the study of protein phosphorylation in egg activation 196
Acknowledgments 196
Appendix A. Supplementary material 196
References 196

7. The mammalian egg's zona pellucida, fertilization, and fertility **207**

Eveline S. Litscher and Paul M. Wassarman

1. Introduction to the ZP 209
2. Mammalian oogenesis 210
2.1 Meiosis 210
2.2 Oogenesis 211
3. Features of ZP matrix 215
4. ZP proteins and genes 217
4.1 ZP proteins 217
4.2 ZP genes 219
4.3 ZP gene expression 222
5. Assembly of ZP proteins 223
6. ZP domain 226
6.1 ZPD subdomains and linker 227
6.2 ZPD Cys residues 227
7. Primary structure of ZP proteins 229
7.1 ZP2 and ZP3 229
7.2 ZP1 and ZP4 230
7.3 Trefoil domain 232
8. Three-dimensional structure of ZP proteins 232
8.1 ZPD subdomains 232
8.2 ZP3 dimers 233
8.3 ZP fibrils 234
9. Evolution of ZP proteins 235

10. Mammalian fertilization and the ZP 236
10.1 Mammalian fertilization 237
10.2 Acrosome reaction 237
10.3 Sperm-binding to ZP 239
10.4 Sperm-egg fusion 241
10.5 Fertilized Egg's ZP 241
11. Inactivation and mutation of ZP genes 242
11.1 Homozygous-null mice 243
11.2 Heterozygous-null mice 244
11.3 Mutated human ZP genes 244
12. Final comments 245
Acknowledgments 246
References 246
Further reading 258

8. Luteinizing hormone-induced changes in the structure of mammalian preovulatory follicles **259**

Corie M. Owen and Laurinda A. Jaffe

1. Introduction 259
2. Structure of mammalian preovulatory follicles 260
3. Luteinizing hormone receptor localization and signaling 263
4. Methods for inducing and observing ovulation 265
5. Cumulus expansion and follicular enlargement, interrelated events 267
6. Apical thinning, a multistep process 268
7. Invagination and contraction of the follicular surface 272
8. Increases in vascular permeability, capillary diameter, and angiogenesis 274
9. Conclusions 275
Acknowledgments 276
References 276

9. Cellular and molecular regulations of oocyte selection and activation in mammals **283**

Xuebing Yang, Yan Zhang, and Hua Zhang

1. Introduction 284
2. Oocyte selection and arrest before the establishment of female reproductive reserve in fetal ovaries 285
2.1 The selection of oocytes during the PF formation 287
2.2 Onset and arrest of meiosis 289

3. Oocytes in PF: a balance of dormancy and activation 291
3.1 Oocyte dormancy entering and PF formation 291
3.2 Molecular regulations of oocyte activation in PFs 293
3.3 Heterogeneity of oocyte activation in PFs 296
3.4 Oocyte and follicle growth after activation 298
4. Oocyte maturation: an orchestration between nucleus and cytoplasm 301
5. Conclusions and future perspective 303
Acknowledgements 305
References 305

10. The characteristics of the calcium signals that activate mammalian eggs at fertilization 317

Karl Swann

1. The sperm-induced Ca^{2+} signals that cause egg activation 318
2. The importance of multiple Ca^{2+} transients in egg activation 322
3. PLCζ induced Ca^{2+} oscillations in eggs 324
4. The mechanism of PLCζ induced Ca^{2+} oscillations 327
5. Other soluble sperm factors and Ca^{2+} release in eggs 331
6. The sensitivity of Ca^{2+} release to different stimuli 333
7. Changes in ATP concentration at fertilization 336
8. Unresolved problems 340
Acknowledgments 341
References 341

11. Ion channels and transporters involved in calcium flux regulation in mammalian sperm 351

Claudia Sánchez-Cárdenas, Enrique I. Oliver, Julio C. Chávez, Guillermina M. Luque, Arturo Hernández-Cruz, Mariano G. Buffone, Alberto Darszon, Pablo E. Visconti, and Ana Romarowski

1. Introduction 352
2. Evaluating the evidence for the role of an ion transporter in calcium homeostasis 353
2.1 Identification criteria 354
2.2 Activity criteria 354
2.3 Functional criteria 355
3. Calcium regulation in cells and sperm 357
4. Plasma membrane calcium entry mechanisms 358
4.1 VOCs 358
4.2 SMOCs 359
4.3 ROCs 359

4.4 Cation/calcium channels of sperm (CatSper) complex 360
4.5 TRPs 360
4.6 SOCs 362
5. Plasma membrane calcium extrusion mechanisms 363
6. Intracellular calcium storage 364
7. Organellar calcium uptake in mammalian sperm 365
7.1 SERCAs 366
7.2 SPCAs 367
7.3 Inward mitochondrial calcium transport 367
8. Molecular basis of organellar calcium release in mammalian sperm 369
8.1 Inositol 3-phosphate receptors (IP_3Rs) 370
8.2 Ryanodine receptors 371
8.3 Two-pore channels (TPC) 372
8.4 Mitochondrial calcium extrusion 373
9. Final remarks 373
Acknowledgments 374
References 374

12. Paternal contributions to mammalian zygote – Beyond sperm-oocyte fusion **387**

Peter Sutovsky, Michal Zigo, Filip Tirpak, and Richard Oko

1. Introduction - fertilization beyond sperm-oolemma fusion 388
2. Perinuclear theca cargo 390
2.1 Perinuclear theca and its fate after fertilization 390
2.2 Participation of perinuclear theca cargos in oocyte activation 391
3. Sperm contributions to early zygotic development 396
3.1 Triggering of anti-polyspermy defense by the fertilizing spermatozoon 396
3.2 Pronuclear development 398
3.3 Centrosomal inheritance 402
4. Paternal mitochondria and post-fertilization sperm mitophagy 405
4.1 The tale of mitochondrial Eve and Steve 405
4.2 Post-fertilization sperm mitophagy 406
5. Accessory sperm structures 411
5.1 Acrosome 411
5.2 Flagellum 412
6. Ribonucleic acids 412
6.1 Sperm transcriptome 412
6.2 Non-Coding RNAs 417

7. Conclusions 420
7.1 Unresolved issues 420
7.2 Clinical aspects and biotechnological considerations 424
7.3 A male's worth 429
Acknowledgments 431
References 431
