List of contributors xi
Preface xvii

Part I Introduction 1

1. **Glycolysis: breaking paradigms since Meyerhof's contribution** 3
Rita Ferreira, Margarida Fardilha, Hugo Rocha, Manuel A. Coimbra and Pedro Fontes Oliveira

1.1 Introduction 3
1.2 Pyruvate or lactate: what is the end product of glycolysis? 6
1.3 Glycolytic enzymes work together to maximize their activity 8
1.4 Control of metabolic damage in glycolysis 9
1.5 Glycolytic enzymes: more than metabolic players 10
1.6 Conclusions 11
References 11

Part II Glycolysis and physiological processes

2. **Development and glycolysis dependence** 17
Hugo Fernandes-Silva, Jorge Correia-Pinto and Rute Silva Moura

2.1 Metabolism and embryonic development: general considerations 17
2.2 Temporal control and metabolic switches during embryonic development 17
2.3 Signaling metabolism interactions during embryonic development 20
2.4 Metabolism, gene expression regulation, and epigenetic control in embryonic development 21
2.5 Metabolism, glycolysis, and embryonic development: conclusions and future perspectives 22
References 23

3. **Neuro–glia communication and glycolysis** 27
Susana Cardoso and Paula I. Moreira

3.1 Introduction 27
3.2 Brain glucose metabolism: at a glance 28
3.3 Better together: the important metabolic crosstalk between neurons and glia 32
3.4 Neuro–glia signaling in neurodegenerative disorders: the case of Alzheimer's disease 38

3.5 Final remarks 40
Acknowledgments 42
References 42

4. Glycolysis and skeletal muscle plasticity: lactate as a key signaling molecule 51

Alexandra Moreira-Pais, Rita Ferreira, Paula A. Oliveira, Maria João Neuparth, Hans-Joachim Appell and José Alberto Duarte

4.1 Introduction 51
4.2 Skeletal muscle fibers and their reliance on glycolysis 52
4.3 Feeder pathways for glycolysis 54
4.4 Lactate and muscle fiber fatigue 63
4.5 The role of lactate on mitochondrial biogenesis and functionality 64
4.6 Conclusions 67
Acknowledgments 67
References 67

5. Glucose utilization by the trained heart: the molecular mechanisms behind fuel choice 75

Rita Nogueira-Ferreira, Daniel Moreira-Gonçalves, Mário Santos, Adelino Leite-Moreira, Fabio Santos Lira and Rita Ferreira

5.1 Introduction 75
5.2 Revisiting glucose metabolism in the healthy heart 76
5.3 The contribution of glycolysis to the metabolic remodeling of the trained heart 82
5.4 Conclusions 86
Acknowledgments 86
References 87

6. Bone glycolysis and the regulation of energy balance 91

Hélder Fonseca

6.1 Introduction 91
6.2 Bone as an endocrine organ. Who would have thought it? 93
6.3 Evidence of bone as a regulator of energy homeostasis 95
6.4 Final remarks 110
Acknowledgments 111
References 111

7. Glycolysis in adipose tissue-dependent thermogenesis 119

Marcelo Topete, Sofia S. Pereira, Sara Andrade, Sofia B. Oliveira and Mariana P. Monteiro

7.1 Adipose tissue 119
7.2 Types of adipose tissue 121

7.3 BAT nonshivering thermogenesis 125
7.4 UCP1-independent thermogenesis in adipocytes 127
7.5 Glycolysis in BAT nonshivering thermogenesis 128
7.6 Nonshivering thermogenesis in the context of metabolic diseases: obesity and type 2 diabetes 131
7.7 Conclusion 133
Acknowledgments 134
References 134

8. Liver metabolism: the pathways underlying glucose utilization and production 141

Rita Nogueira-Ferreira, Pedro Fontes Oliveira and Rita Ferreira

8.1 Introduction 141
8.2 Overview of the metabolic networks involving glucose use and production in hepatocytes 141
8.3 Hormonal regulation of glucose metabolism in hepatocytes 145
8.4 Liver-centered organ–organ interplay 151
8.5 Conclusions 153
Acknowledgments 153
References 154

9. The Warburg-like effect in male reproductive events 157

Marco G. Alves, Luís Rato and Pedro Fontes Oliveira

9.1 Introduction 157
9.2 Metabolic cooperation in the testis is established as a Warburg-like effect 159
9.3 Relevance Warburg-like effect in male reproductive potential: from germ cells to fertilization 164
9.4 Endogenous and exogenous factors that control the Warburg-like effect in testis 167
9.5 Conclusion 171
References 172

10. Pancreatic β cells: the metabolic network underlying body's glucostat 181

Rita Ferreira, Rita Nogueira-Ferreira, Adelino Leite-Moreira, Hélder Fonseca and João Sérgio Neves

10.1 Introduction 181
10.2 Coupling glucose metabolism with insulin secretion in β cells 182
10.3 Metabolic amplifiers of insulin secretion 186
10.4 Other physiologic "potentiators" of insulin secretion 191
10.5 Conclusions 194
Acknowledgments 194
References 194

Part III Glycolysis and pathological events 199

11. Exploring glycolytic adaptations in cancer cells 201

Bárbara Matos, John Howl, Carmen Jerónimo and Margarida Fardilha

11.1 Introduction 201
11.2 Warburg effect: who is responsible? 202
11.3 Warburg effect: how does it contribute to cancer progression? 208
11.4 Therapeutic applications 213
11.5 Conclusions and future challenges 224
Acknowledgments 224
References 225

12. The glycolytic pathway to heart failure 235

Rui A. Carvalho

12.1 Glycolysis 235
12.2 Glycolysis contributions to heart metabolism 235
12.3 Glycolysis in the ischemic heart 242
12.4 Glycolysis in ischemic heart disease 242
12.5 Glycolysis alterations in the heart during development, differentiation, and postnatal maturation 243
12.6 Glycolysis in the exercised heart 244
12.7 Glycolysis in the hypertrophied heart 244
12.8 Glycolysis in heart failure 245
12.9 Metabolically-driven heart failure therapeutic approaches 247
References 247

13. Glycolysis in pulmonary arterial hypertension and metabolic reprogramming 267

Inês Vasconcelos, Francisco Pérez-Vizcaíno, Adelino Leite-Moreira, Carmen Brás-Silva and Rui Adão

13.1 Introduction 267
13.2 Metabolic pathways and molecular concepts 268
13.3 Metabolic dysregulation in the right ventricle 275
13.4 Diagnostics for metabolic reprogramming in PAH 276
13.5 Therapeutic development of metabolic drugs in PAH 277
13.6 Mutations associated with PAH and metabolic abnormalities 281
13.7 Summary 282
Acknowledgments 283
References 283

14. Glycolysis and diabetes mellitus **297**

Paulo Matafome and Tamaeh Monteiro-Alfredo

14.1 Type 2 diabetes mellitus pathophysiology 297
14.2 Alterations of glycolysis in diabetes and their relation with oxidative stress and diabetic complications 301
14.3 Conclusion 311
References 311

15. Inborn glycolytic pathway defects **321**

Hugo Rocha

15.1 Introduction 321
15.2 Inborn errors of the glycolytic pathway 322
15.3 Pathophysiology 327
15.4 Diagnosis 327
15.5 Treatment approaches 328
15.6 Deficiency of metabolite repair enzymes 328
15.7 Conclusions 329
References 329

16. Glucose, glycolysis, and neurodegenerative disorders **333**

Patricia Coelho and Ana Cristina Rego

16.1 Introduction 333
16.2 Role of brain cell interactions in glucose metabolism 335
16.3 Age-dependent changes in glucose metabolism 341
16.4 Mitochondria and brain glucose metabolism 346
16.5 Dysfunctional glucose metabolism: impact on neurodegenerative disorders 350
16.6 Conclusion 361
References 362

17. Viral infections and glycolysis **385**

Amy L. Adamson

17.1 Introduction to viruses 385
17.2 Why do viruses manipulate glycolysis? 389
17.3 Viruses that trigger the Warburg effect 391
17.4 Viruses that alter glycolysis 392
17.5 Controlling viral infection and disease by targeting glycolysis 400
17.6 Takeaway 404
References 404

Part IV Supplemental information

18. Useful bioinformatics approaches for studying pathological conditions characterized by the dysregulation of glucose metabolism **411**

Christina M. Reumiller, Adelino Leite-Moreira, Rui Vitorino, Inês Falcão-Pires and Fábio Trindade

18.1 Introduction 411
18.2 Materials 412
18.3 Methods 413
18.4 Notes 430
Acknowledgments 431
Appendix 432
References 440

19. Determination of glycolysis flux by extracellular flux measurements **443**

Raquel L. Bernardino, Patricia C. Braga, Pedro Fontes Oliveira and Marco G. Alves

19.1 Summary 443
19.2 Introduction 443
19.3 Materials, equipment, and reagents 445
19.4 Protocols 446
19.5 Analysis and statistics 449
19.6 Related techniques 450
19.7 Advantages and disadvantages 451
19.8 Alternative methods and procedures 451
19.9 Troubleshooting and optimization 452
References 453
