Preface	xxi
1. CARBOHYDRATES	1-85
1.1 Introduction	2
1.2 Occurrence and Biological Importance	2
1.3 Definitions	
1.4 Formation of Carbohydrates in Plants	3
1.5 Classification of Carbohydrates	4
A. Monosaccharides	4
B. Oligosaccharides	5
C. Polysaccharides	8
1.6 Configurational Relationship of Monosaccharides	8
A. Correlation of the Configuration of D-Glucose and D-Glyceraldehyde	8
B. Aldotetroses	9
C. Erythro and Threo Diastereomers	10
D. Aldopentoses	11
E. Aldohexoses	12
1.7 Epimers	13
1.8 Structure and Properties of D-Glucose	15
A. Open-Chain Structure of D-Glucose	15
B. Configuration of D (+)-Glucose	17
C. Cyclic Structure of D(+)-Glucose	20
D. Conformations of D(+) Glucose	24
1.9 Determination of the Ring Size of Glucose	25
A. Evidence for the Pyranose Structure of D(+)-Glucose	25
B. Evidence for the Furanose Structure of D(+)-Glucose	26
C. Determination of Ring Size by Oxidations with Periodic Acid	28
1.10 Mutarotation	29
1.11 Osazone Formation	31
1.12 Ketohehexoses	33
1.13 Structure of D(-)-Fructose	33

	A. Configuration of D-Fructose	32
	B. Cyclic Structure of D-Fructose	33
1.14	Reactions of Monosaccharides	36
	A. Esterification	36
	B. Ether Formation	37
	C. Formation of Glycosides	37
	D. Esters of Phosphoric Acid	38
	E. Oxidation of Monosaccharides	41
	F. Reduction of Monosaccharides	46
1.15	Lengthening the Carbon Chain of Aldoses—The Kiliani-Fischer Synthesis	47
1.16	Shortening the Carbon Chain of Aldoses	48
	A. The Wohl Degradation	48
	B. The Ruff Degradation	49
	C. Weermann Degradation	50
1.17	Interconversions	51
	A. The Interconversion of Glucose, Mannose and Fructose	51
	B. Conversion of an Aldose to the Corresponding Ketose	52
	C. Conversion of an Aldose to its Epimer	52
	D. Conversion of a Ketose into the Corresponding Aldose	53
1.18	Maltose	53
1.19	Lactose	56
1.20	Cellobiose	59
1.21	Sucrose	60
1.22	Aldopentoses—The Sugars of Nucleic Acids	62
	A. Deoxy Sugars 2-Deoxy-D-Ribose	62
	B. D-Ribose	64
1.23	Polysaccharides	65
	A. Cellulose	65
	B. Starch	67
	C. Glycogen	70
	D. Chitin	71
	E. Heparin	72
1.24	Biosynthesis of Carbohydrates—The Calvin Cycle	72
	A. Stage 1	73
	B. Stage 2	73
	C. Stage 3	74
1.25	Natural Products Derived from Carbohydrates	76
	A. Ascorbic Acid	76
	B. Some Natural Glycosides	78
	C. Anthocyanins—Natural Colouring Matters	79
	D. Anthraquinone Glycosides	80

E. Indican—A Natural Colouring Matter	81
F. Cardiac Glycosides	81
G. Some Biologically Important Sugars	82
H. Glycosylamines	83
I. Amino Sugars	83
J. Carbohydrate Antibiotics	84

2. Amino Acids, Peptides, and Proteins 87-192

2.1 Introduction	88
2.2 Amino Acids – The Building Blocks of Proteins	88
2.3 Classification of Amino Acids	89
2.4 The Essential Amino Acids	92
2.5 Stereochemistry of α -Amino Acids	93
2.6 Synthesis of α -Amino Acids	93
A. Amination of α -Halogeno Acids	93
B. Gabriel Phthalimide Synthesis	95
C. Strecker Synthesis	95
D. Malonic Ester Synthesis	96
E. Aldehyde Condensations with Glycine Derivatives (Erlenmeyer Azlactone Synthesis)	101
F. Synthesis via Molecular Rearrangements	103
G. Reductive Amination	107
H. Oxidation of Amino Alcohols	108
2.7 Resolution of Racemic Mixtures of Amino Acids	108
2.8 Stereoselective Synthesis of Amino Acids	110
2.9 Biosynthesis Amino Acids	111
2.10 Amino Acids as Dipolar ions	115
2.11 Amino Acids as Acids and Bases	116
2.12 Isoelectric Point	120
2.13 Separation of Amino Acids	124
A. Electrophoresis	124
B. Paper Chromatography	124
C. Thin layer Chromatography (TLC)	125
D. Column Chromatography	126
E. Ion-Exchange Chromatography	127
2.14 Chemical Reactions of Amino Acids	128
A. Reactions due to Amino Group	128
B. Reactions due to the Carboxyl Group	131
C. Reactions due to both the Amino and Carboxyl Groups	133
2.15 Polypeptides	136
A. Introduction	136
B. Nomenclature of Peptides	136

181	2.16	Synthesis of Peptides	181
181		A. The Basic Scheme	181
181		B. Protection of the Amino Group	181
181		C. Protection of the Carboxyl Group	181
181		D. Protection of Side-Chains of Amino acids	181
181	2.17	Methods of Peptide Synthesis (Coupling Methods)	181
181		A. Acid Chloride Method	181
181		B. Curtius Azide Method	181
181		C. DCC Method	181
181		D. Mixed Anhydride Method	181
181		E. Use of Other Activating Groups	181
181	2.18	Solid Phase Peptide Synthesis	181
181		A. Introduction	181
181		B. The Basic Scheme of Solid Phase Peptide Synthesis	181
181		C. The Merrifield Method	181
181		D. Protection and Deprotection of Amino Groups	181
181		E. Fmoc Method of Solid Phase Peptide Synthesis	181
181	2.19	Determination of Primary Structure of Peptides	181
181		A. Introduction	181
181		B. Complete Hydrolysis	181
181		C. Analysis of the Hydrolysate	181
181		D. Cleavage of Disulphide Bridges	181
181		E. Determination of the Amino Acid Sequence	181
181		F. Selective Cleavage by Chemical Methods	181
181		G. Partial Hydrolysis by Enzymes	181
181	2.20	Identification of the N-Terminal Amino Acid (End Group Analysis)	181
181		A. Barger's Method	181
181		B. The DNP Method (Sanger Method)	181
181		C. The Dansyl Method	181
181		D. The Edman Method	181
181		E. Condensation with Isocyanate	181
181	2.21	Identification of the C-Terminal Amino Acid	181
181		A. Reaction with Benzylamine	181
181		B. Thiohydantoin Formation	181
181		C. Reaction with Hydrazine (Hydrazinolysis)	181
181	2.22	Use of Enzymes	181
181	2.23	Time Course Analysis	181
181	2.24	Some interesting peptides	181
181		A. Aspartame, the Sweet Peptide	181
181		B. Glutathione	181
181		C. Enkephalins	181

37	D. Bradykinin	174
37	E. Oxytocin	174
38	F. Vasopressin	175
41	G. Gramicidin S and Tyrocidine A	176
43	H. Insulin	177
44	2.25 Importance and Biological functions of	
44	Proteins and polypeptides	178
44	2.26 Classification of Proteins	180
45	A. Classification of Proteins on the Basis of their Shape	180
47	B. Classification of Proteins on the Basis of Structure	181
48	2.27 Molecular Shape of Proteins	183
49	2.28 Factors that Influence Molecular Shape	184
49	2.29 Some Features of Fibrous Proteins	185
50	2.30 Some Features of Globular Proteins	186
50	2.31 Structure of Proteins	187
54	A. Primary Structure	187
55	B. Secondary Structure	187
57	C. Tertiary Structure	190
57	D. Quaternary Structure	191
57	2.32 Denaturation of Proteins	192
58	3. Enzymes	193-246
59	3.1 Introduction	194
60	3.2 Nomenclature and Classification of Enzymes	194
61	A. Systematic Names	195
62	B. Major Classes of Enzymes	195
63	C. Oxido-reductases	196
63	D. Hydrolases	197
64	E. Transferases	199
65	3.3 Characteristics of Enzymes	199
66	A. Catalytic Power	199
67	B. Control of Enzyme Action	200
67	C. Enzyme Specificity	201
68	D. Stereospecificity	202
68	3.4 Factors Influencing Enzyme Activity	204
69	A. Effect of Temperature on Enzyme Activity	204
70	B. Effect of pH on Enzyme Activity	205
71	C. Effect of Substrate Concentration	207
71	D. Effect of Enzyme Concentration	208
72	3.5 Cofactors—Coenzymes	208
74	A. Definition	208
	B. Coenzymes	209

	C. Cofactors	20
	D. Functions of Coenzymes	20
	E. Coenzyme Classification	20
	F. Inorganic Cofactors	21
3.6	Structure and Functions of Various Coenzymes	21
	A. NAD^+ and NADP^+	21
	B. Flavin Mononucleotide (FMN) and Flavin Adenine Dinucleotide (FAD)	21
	C. Thiamine Pyrophosphate (TPP)	21
	D. Pyridoxal-5-phosphate	21
	E. Coenzyme A (CoA)	21
3.7	Enzyme Inhibitors	21
	A. Reversible Inhibitors	21
	B. Non-Reversible Inhibitors	21
3.8	Mechanism of Enzyme Catalysis	21
3.9	How do Substrates Bind to Enzymes ?	21
	A. The Lock and Key Model	21
	B. Induced Fit Model	21
3.10	Alcoholic Fermentation	21
	A. Historical Background	21
	B. The Overall Pathway in Alcoholic Fermentation	21
	C. Conversion of Glucose to Glyceraldehyde-3-phosphate	21
	D. The Conversion of Glyceraldehyde-3-Phosphate to Pyruvate	21
	E. The Conversion of Pyruvate to Acetaldehyde and then to Ethanol	21
3.11	Glycolysis	21
	A. Introduction	21
	B. Overall Pathway in Glycolysis	21
	C. The Conversion of Pyruvate to Lactate in Muscle	21
	D. Control Points in Glycolysis	21
3.12	Citric Acid Cycle	21
	A. Introduction	21
	B. Overall Pathway of the Citric Acid Cycle	21
	C. Conversion of Pyruvate to Acetyl-Co A	21
	D. The Individual Reactions of the Citric Acid Cycle	21
3.13	Biocatalysis—Importance in Green Chemistry and the Chemical Industry	21
	A. Introduction to Green Chemistry	21
	B. Principles of Green Chemistry	21
	C. Biocatalysis in the Chemical Industry	21
	D. Why Biocatalysis?	21

4. Pyrimidines, Purines, and Nucleic Acids 247-311

4.1	Introduction and Biological Importance of Nucleic Acids	248
4.2	Pyrimidines	250
A.	Introduction	250
B.	Aromatic Character of Pyrimidine	251
C.	Chemical Properties of Pyrimidine	252
D.	Synthetic Methods	257
4.3	Uracil	259
A.	General Features	259
B.	Properties and Reactions of Uracil	259
C.	Uses of Uracil	260
D.	Synthesis of Uracil (2,4-Dioxypyrimidine)	261
4.4	Thymine (5-Methyluracil)	262
A.	Structure and General Features	262
B.	Synthesis of Thymine	262
4.5	Cytosine	263
A.	General Features	263
B.	Chemical Reactions	263
C.	Synthesis of Cytosine	265
4.6	Purines	266
A.	Introduction	266
B.	Structure and Chemical Reactions of Purine and its Simple Derivatives	267
C.	Synthesis of Purine	269
4.7	Adenine	270
A.	Structure and General Features	270
B.	Properties of Adenine	271
C.	Synthesis of Adenine	272
4.8	Guanine	274
A.	Structure and General Features	274
B.	Properties and Reactions of Guanine	274
C.	Synthesis of Guanine	275
D.	Uses of Guanine	276
4.9	Ureides	277
A.	Simple Ureides	277
B.	Cyclic Ureides	277
4.10	Uric Acid	278
A.	Introduction	278
B.	Structure of Uric Acid	278
C.	Synthesis of Uric Acid	282

4.11	Caffeine	
	A. Isolation from Tea Leaves	
	B. Structure of Caffeine	
	C. Synthesis of Caffeine	
4.12	Nucleosides	
4.13	Nucleotides	
4.14	Polynucleotides	
4.15	The Nucleic Acids	
4.16	Structure of DNA (The Double Helix)	
4.17	Conformational Variations in DNA (Forms of DNA)	
	A. B-DNA	
	B. A-DNA	
	C. Z-DNA	
4.18	Denaturation and Renaturation of DNA	
4.19	Replication of DNA	
4.20	Ribonucleic Acid (RNA)	
4.21	Principal Kinds of RNAs and Their Structures	
	A. Transfer RNA (t-RNA)	
	B. Ribosomal RNA (r-RNA)	
	C. Messenger RNA (m-RNA)	
4.22	The Genetic Code	
	A. Introduction—Definition	
	B. General Features of the Genetic Code	
4.23	Transcription	
	A. Introduction	
	B. Mechanism	
4.24	Translation	
	A. Introduction	
	B. Overall Process of Translating the Genetic Message	
4.25	Gene Therapy	
	A. Introduction	
	B. Types of Gene Therapy	
	C. The Process	
	D. Problems and Risks Involved in Gene Therapy	

5. Lipids-Oils and Fats

313-349

5.1	What are Lipids?	
5.2	Classification of Lipids—Types of Lipids	
	A. Simple Lipids	
	B. Complex Lipids or Conjugated Lipids	
	C. Derived Lipids	

283	5.3	Biological Functions of Lipids	321
283	5.4	Oils and Fats as Simple Lipids	322
283		A. Introduction	322
287		B. Animal and Vegetable Sources	323
288		C. Chemical and Physical Characteristics	324
291		D. Saponification	325
293	5.5	Fatty Acids in Fats and Oils	325
294	5.6	Fatty Acid Composition in Some Fats and Oils	327
295	5.7	What are Omega-3 and Omega-6 Fatty Acids?	328
298	5.8	Biological Role of Fatty Acids	328
298	5.9	Trans Fats and their Effect	329
299		A. What are Trans Fats ?	329
299		B. Effect of Trans Fats on the Heart	330
299		C. Effect of Trans Fats on the Brain	330
300		D. Effect of Fats on Blood Cholesterol Levels	330
302	5.10	Extraction of Oils and Fats	331
302		A. i. Rendering-Fruits and Seeds	331
303		ii. Rendering-Animal Fats	331
303		B. Pressing	331
303		C. Solvent Extraction	332
304	5.11	Refining of Oils and Fats	333
304		A. Alkali Refining	333
305		B. Water Refining	333
306		C. Bleaching	334
306		D. Deodourisation	334
307	5.12	Hydrogenation	334
308	5.13	Identification of Fats and Oils	335
308		A. Reichert-Meissel Value	335
308		B. Saponification Number	336
309		C. Iodine Number	337
309		D. Acid Number	339
309	5.14	Flavour Changes in Oils and Fats	339
310		A. Rancidity	339
310		B. Different Types of Rancidity	340
349	5.15	Cholesterol	341
314		A. Dietary Sources of Cholesterol	341
314		B. Physiology and Biological Importance of Cholesterol	341
314		C. High Cholesterol and Heart Disease	342
314	5.16	Importance of Triglycerides	343
316	5.17	Lipid Membranes	344
320		A. Introduction	344
		B. Properties	345

	C. Membrane Proteins	
	D. Functions of Membranes	
	E. Membrane Transport	
5.18	Liposomes	
	A. Introduction	
	B. Properties of Liposomes	
	C. Applications of Liposomes	
6.	Terpenoids	351-399
6.1	Introduction—The Essential Oils	
6.2	Occurrence in Nature	
6.3	Isoprene Rule	
6.4	Classification of Terpenoids	
6.5	Isolation From Natural Sources	
6.6	Citral	
	A. Introduction	
	B. Isolation of Citral	
	C. Structure of Citral	
	D. Synthesis of Citral	
6.7	Dipentene	
	A. Introduction	
	B. Isolation of Dipentene	
	C. Structure of Dipentene (or Limonene)	
	D. Synthesis of Dipentene	
6.8	Geraniol	
	A. Introduction	
	B. Isolation	
	C. Structure of Geraniol	
6.9	α -Terpineol	
	A. Introduction	
	B. Structure of α -Terpineol	
	C. Synthesis of Terpenylic Acid	
	D. Synthesis of Terebic Acid	
	E. Synthesis of α -Terpineol	
6.10	Menthol	
	A. Introduction	
	B. Structure of Menthol	
	C. Synthesis of Menthol	
6.11	α -Pinene	
	A. Structure of α -Pinene	
	B. Synthesis of α -Pinene	

46	6.12	Camphor	375
47		A. Introduction	375
47		B. Structure of Camphor	375
47		C. Synthesis of ($\pm$) Camphoronic Acid	378
47		D. Synthesis of ($\pm$) Camphoric Acid	378
48		E. Synthesis of Camphor	379
48		F. Commercial Preparation of Camphor	380
95	6.13	Diterpenoids – Phytol	380
51		A. Introduction and Isolation	380
52		B. Structure of Phytol	381
52		D. Synthesis of Phytol	382
53	6.14	Triterpenoids – Squalene	383
54		A. Introduction and Importance of Squalene	383
55		B. Structure of Squalene	383
55		C. Synthesis of Squalene	384
55	6.15	Tetraterpenoids–Carotenoids	385
56	6.16	β -Carotene	386
58		A. Introduction and Importance	386
59		B. Structure of β -Carotene	387
59		C. Synthesis of β -Carotene	389
59	6.17	α -Carotene	391
60		A. Introduction and Importance of α -Carotene	391
63		B. Structure of α -Carotene	391
64		C. Synthesis of α -Carotene	392
64	6.18	Lycopene	392
64		A. Introduction and Importance of Lycopene	392
64		B. Structure of Lycopene	393
65		C. Synthesis of Lycopene	394
65	6.19	γ -carotene	394
66		A. Structure of γ -Carotene	395
67		B. Synthesis of γ -Carotene	395
68	7. Alkaloids		397-441
68	7.1	Introduction	397
69	7.2	Occurrence in Nature	398
69	7.3	Extraction of Alkaloids From Plants	398
69	7.4	General Properties of Alkaloids	399
70	7.5	Hofmann's Exhaustive Methylation	400
71	7.6	Emde Modification	401
71	7.7	Classification Of Alkaloids	402
73		A. Phenylethylamine Group	402
		B. Pyrrolidine Group	403

372	C. Pyridine-piperidine Group
372	D. Pyridine-pyrrolidine Group
372	E. Quinoline Group
378	F. Isoquinoline Group
378	G. Phenanthrene Group
379	H. Indole Group
380	7.8 Importance and Physiological Action of Alkaloids
380	7.9 Coniine
380	A. Isolation of Coniine
381	B. Properties of Coniine
382	C. Structure of Coniine
383	D. Synthesis of Coniine
383	7.10 Nicotine
383	A. Isolation of Nicotine
384	B. Properties of Nicotine
385	C. Structure of Nicotine
386	D. Synthesis of Nicotine
386	E. Medicinal Importance of Nicotine
387	7.11 Hygrine
389	A. Properties
391	B. Structure of Hygrine
391	C. Synthesis of Hygrine
391	D. Absolute Configuration of Hygrine
392	E. Medicinal Importance of Hygrine
392	7.12 Atropine
392	A. Isolation of Atropine
393	B. Properties of Atropine
394	C. Structure of Atropine
394	D. Structure of ($\pm$)-Tropic Acid
395	E. Synthesis of Tropic Acid
395	F. Structure of Tropic (Tropanol)
397-441	G. Synthesis of Tropane
397	H. Final Structure of Atropine
397	7.13 Cocaine
398	A. Isolation of Cocaine
399	B. Properties of Cocaine
400	C. Structure of Cocaine
401	D. Structure of Ecgonine
402	E. Synthesis of Ecgonine
402	F. Final Structure of Cocaine
403	G. Medicinal Importance of Cocaine

403	7.14 Quinine	432
403	A. Introduction	432
404	B. Structure of Quinine	432
404	C. Medicinal Uses of Quinine	434
404	7.15 Morphine	435
405	A. Introduction and Isolation	435
405	B. Structure of Morphine	435
407	C. Medicinal Uses and Side Effects	439
407	7.16 Medicinal Importance of Reserpine	440
408	Index	443
