Introduction to the Series	vii
Preface	ix
Notations	xi
1 Background to Modern Statistical Genetics	1
1.1 Introduction: Where is the Gene?	1
1.2 Function of Genes in Reproduction	5
1.3 Some Facts in Molecular Genetics	14
1.4 Tools in Molecular Genetics	22
1.5 Genetic Engineering	30
Exercise 1	39
2 Linkage Analysis with Qualitative Trait	43
2.1 Basic Concepts in Pedigree Analysis	43
2.2 Linkage Analysis for Large Pedigrees	53
2.3 Incomplete Penetrance and Sibling Studies	65
2.4 Designs in Linkage Analysis	82
Exercise 2	92
3 Genetics of Quantitative Trait	97
3.1 Quantitative Trait Locus (QTL) Based on Sibpairs	97
3.2 Interval Mapping of Quantitative Trait Loci	107
3.3 Heritability Estimation	126
3.4 Breeding Value Evaluation Models	140
Exercise 3	154
4 Special Topics	157
4.1 Small Area Gene Mapping by Linkage Disequilibrium	157
4.2 Gene, Exon and Intron Identification	166

4.3 Reconstruction of Evolutionary Path	172
4.4 Forensic Evidence Using Genetic Markers	182
Exercise 4	192
Appendix A. Statistical Results Useful in Genetics	195
A.1 Multivariate Analysis and Regression	195
A.2 Likelihood Ratio Test and General Linear Models	199
A.3 Multinomial Distribution	204
A.4 Inference on Frequency Tables	206
A.5 Discriminant Analysis and Neural Network	208
Appendix B. Selected Public Domain Computer Programs for Genetic Data Analysis	213
B.1 A Teaching Linkage Analysis Program for Two Generation Families	213
B.2 A Simulation Program to Compute ELOD and Var(LOD) for Two Generation Families	217
B.3 <i>Liped</i> and Programs Described in Terwilliger and Ott's Handbook	219
B.4 Simlink—Power Prediction for Given Pedigrees	220
B.5 SIB-PAIR: A Nonparametric Linkage Software	221
B.6 MAPMAKER/SIBS, MAPMAKER/QTL, Genhunter, GAS (Genetic Analysis System)	222
B.7 A SAS Program to Compute Kinships Coefficients	223
B.8 Using SAS-IML to Solve Handerson's Equation	224
B.9 ETDI (Extended Transmission Disequilibrium Test)	225
B.10 GeneBank and Genetic Data Sources	225
Answers or Hints to Exercises	227
Bibliography	233
Index	245
