

Contents

Series Introduction	iii
Preface	v
Contributors	ix
1. An Overview and Historical Perspective of Protein Biotechnology	1
<i>Sidney Udenfriend</i>	
The Resurgence of Protein Chemistry	1
An Historical View	2
Application to Biotechnology	5
Concluding Remarks	7
Bibliography	7
2. Protein Structure	9
<i>S. Russell Lehrman</i>	
Introduction	9
Basic Elements of Proteins: The Amino Acids	11
The Four Levels of Protein Structure	19
Structural Categories of Proteins	32
The De Novo Design of Peptides and Proteins	35
References	38
	xi

3. Protein Biosynthesis	39
<i>Richard A. Wolfe and Stanley Stein</i>	
Introduction	39
The Genetic Information	40
Mechanism of Biosynthesis	44
Posttranslational Modifications	48
References	54
Suggested Reading	55
4. Protein Purification and Analysis by Liquid Chromatography and Electrophoresis	57
<i>Jodi L. Fausnaugh</i>	
Introduction	57
Liquid Chromatography	58
Electrophoresis	77
Suggested Reading	84
5. Proteins as Biological Effectors	85
<i>Milton T. W. Hearn, Peter G. Stanton, and Joseph Bertolini</i>	
Introduction	85
Immunoglobulins: A Host Defense System	87
Blood Clotting: A Zymogen Activation System	94
Endocrine Protein Hormones:	
Molecular Effectors from Distant Horizons	101
Growth Factors: The Mephistopheles of the Protein Effector World	117
Antiproteins: Exemplary Candidates for Feedback	
Control by Protein Effectors	128
Summary and Conclusions	133
Suggested Reading	134
6. Isolation of Natural Proteins	137
<i>Stanley Stein</i>	
Introduction	137
The Complexity of Natural Proteins	138
Preliminary Considerations	142
The Isolation Process	149
Proof of Purity	158
Concluding Remarks	159
References	160

7. Large-Scale Production of Recombinant Proteins: Human Leukocyte Interferon	161
<i>Fazal R. Khan and Vishva R. Rai</i>	
Introduction	161
Cloning the Leukocyte Interferon Gene	162
Analysis of the Product	162
Purification of rIFN α -2a	163
References	169
Suggested Reading	169
 8. Production of Human Calcitonin by Recombinant DNA Technology	 171
<i>Barry N. Jones</i>	
Introduction	171
Human Calcitonin	172
Design of the Fusion Protein	173
Production of Calcitonin	174
Analysis of the Product	177
References	178
 9. Structural Analysis of Proteins	 181
<i>Barry N. Jones and Stanley Stein</i>	
Introduction	181
Application to Analysis of rIL2	197
Sample Preparation	199
References	200
 10. Chemical Synthesis of Peptides	 203
<i>Chester A. Meyers</i>	
Introduction	203
Background	204
Historical Development of Chemical Peptide Synthesis	205
Solid-Phase Peptide Synthesis	207
Limitations	213
Purification and Characterization	218
Synthetic Analogs	222
Concluding Remarks	232
References	232

11. Production and Analysis of Proteins by Recombinant DNA Technology	235
<i>Sidney Pestka</i>	
Introduction	235
Genetic Engineering	236
Production of Recombinant Proteins	247
Construction of Expression Vectors for High-Level Expression	248
Purification of Recombinant Proteins	250
Analysis of and Specific Considerations Relevant to Recombinant Proteins	251
Isolation of Recombinants for Human Leukocyte Interferon: An Example of the Procedures	256
The Future	264
Bibliography	265
12. Monoclonal Antibodies	267
<i>James N. Bausch</i>	
Background	267
Structure of Antibodies	267
Secondary Activities of Antibodies	271
Production of Monoclonal Antibodies	272
Purification of Monoclonals	278
Techniques for Detection and Use of Monoclonals	280
Monoclonal Antibody Applications	285
Comparison of Monoclonals and Conventional Antisera	293
Recent Advances	295
References	295
Index	301
