|-------------------------------------------------------------------------------------------------|-----------|
| <b>Chapter 1 Introduction .....</b>                                                             | <b>1</b>  |
| 1.1 What is stress? .....                                                                       | 1         |
| 1.2 Environmental stressors .....                                                               | 3         |
| 1.3 Stress effects disturbing cellular homeostasis .....                                        | 4         |
| 1.4 Stress defense systems and their response to stress .....                                   | 9         |
| 1.5 Scope and purpose of this book .....                                                        | 10        |
| <b>Chapter 2 Basal signal transduction systems involved in stress response .....</b>            | <b>13</b> |
| 2.1 Introduction .....                                                                          | 13        |
| 2.2 Two major second messenger systems: cAMP and Ca <sup>2+</sup> .....                         | 13        |
| 2.3 The MAPK cascade .....                                                                      | 15        |
| <b>Chapter 3 The stress-protein system .....</b>                                                | <b>19</b> |
| 3.1 Introduction .....                                                                          | 19        |
| 3.2 Types, structures, and functions of stress proteins .....                                   | 20        |
| 3.2.1 The sp70 family .....                                                                     | 20        |
| 3.2.1.1 The cytoplasmic cognates: hsc70 and hsc70b .....                                        | 22        |
| 3.2.1.2 The mitochondrial sp70: hsc71 .....                                                     | 25        |
| 3.2.1.3 The sp70 in the ER: hsc72 .....                                                         | 26        |
| 3.2.1.4 The inducible cytoplasmic (nuclear) stress proteins: hsp70 and hsp68 .....              | 27        |
| 3.2.2 hsp83 .....                                                                               | 28        |
| 3.2.3 Small HSPs .....                                                                          | 30        |
| 3.2.4 Ubiquitin .....                                                                           | 33        |
| 3.3 Gene expression, posttranscriptional, and translational regulation of stress proteins ..... | 34        |
| 3.3.1 Gene expression of stress proteins .....                                                  | 34        |
| 3.3.1.1 The heat-shock (transcription) factor (HSF) .....                                       | 35        |
| 3.3.1.2 The heat-shock gene promoter .....                                                      | 39        |
| 3.3.1.3 Gene expression and regulation .....                                                    | 40        |
| 3.3.2 Posttranscriptional and translational regulation of stress proteins .....                 | 45        |
| 3.3.3 Regulation of recovery .....                                                              | 47        |
| 3.4 Multiple pathways for stress protein gene expression .....                                  | 50        |

|                                                                                                                 |            |
|-----------------------------------------------------------------------------------------------------------------|------------|
| <b>Chapter 4 The oxidative stress response system .....</b>                                                     | <b>59</b>  |
| 4.1 Introduction .....                                                                                          | 59         |
| 4.2 Cellular response to reactive oxygen species .....                                                          | 60         |
| 4.2.1 Generation of reactive oxygen species and cellular<br>response under homeostatic conditions .....         | 60         |
| 4.2.2 Cellular responses to oxidative stress .....                                                              | 67         |
| <b>Chapter 5 The metallothionein system .....</b>                                                               | <b>77</b>  |
| 5.1 Introduction .....                                                                                          | 77         |
| 5.2 Properties and types of metallothionein .....                                                               | 77         |
| 5.3 Regulation of metallothionein .....                                                                         | 79         |
| 5.4 Heavy metal stress .....                                                                                    | 83         |
| <b>Chapter 6 The mixed-function oxygenase system .....</b>                                                      | <b>89</b>  |
| 6.1 Introduction .....                                                                                          | 89         |
| 6.2 Description of the mixed-function oxygenase system .....                                                    | 89         |
| 6.3 The mixed-function oxygenase system in insects .....                                                        | 95         |
| 6.4 Degradation of xenobiotics in insects .....                                                                 | 96         |
| <b>Chapter 7 The role of cellular response systems in developing<br/>tolerance to environmental stress.....</b> | <b>99</b>  |
| 7.1 Introduction .....                                                                                          | 99         |
| 7.2 Thermotolerance in insect species .....                                                                     | 100        |
| 7.2.1 Tolerance to heat .....                                                                                   | 100        |
| 7.2.2 Tolerance to cold .....                                                                                   | 107        |
| 7.3 Chemotolerance in insect species .....                                                                      | 111        |
| 7.3.1 The role of the mixed-function oxygenase system in<br>tolerance to insecticides in insects .....          | 112        |
| 7.3.2 The role of metallothionein in tolerance to heavy<br>metals in <i>Drosophila</i> .....                    | 114        |
| <b>Chapter 8 The effects of environmental stress on aging<br/>and cell death .....</b>                          | <b>119</b> |
| 8.1 Introduction .....                                                                                          | 119        |
| 8.2 Effects of environmental stress on aging .....                                                              | 119        |
| 8.2.1 Introduction .....                                                                                        | 119        |
| 8.2.2 The aging process under normal and stressful<br>conditions .....                                          | 121        |
| 8.2.2.1 Rate of production of reactive oxygen species .....                                                     | 122        |
| 8.2.2.2 Scavenging and detoxification capacity<br>of antioxidant systems .....                                  | 122        |
| 8.2.2.3 Capacity to repair oxidative lesions and remove<br>damaged molecules .....                              | 122        |
| 8.2.3 Major factors in cellular degeneration.....                                                               | 125        |
| 8.2.3.1 Unavoidable damage .....                                                                                | 125        |
| 8.2.3.2 Involvement of genetic components in aging .....                                                        | 127        |

|                            |                                                                                                     |            |
|----------------------------|-----------------------------------------------------------------------------------------------------|------------|
| 8.2.3.3                    | Environmental stressors contributing to aging .....                                                 | 128        |
| 8.3                        | Cell death by environmental stress .....                                                            | 130        |
| 8.3.1                      | Introduction .....                                                                                  | 130        |
| 8.3.2                      | Mechanisms and processes initiating and effectuating<br>cell death .....                            | 132        |
| 8.3.2.1                    | The role of mitochondria in the stress-mediated<br>pathway .....                                    | 133        |
| 8.3.2.2                    | DNA damage and the pathway leading to cell<br>death .....                                           | 136        |
| 8.3.2.3                    | The role of Ca <sup>2+</sup> in cell death from environmental<br>stress .....                       | 138        |
| 8.3.2.4                    | The role of HSPs in cell death .....                                                                | 140        |
| 8.3.3                      | Apoptosis or necrosis? .....                                                                        | 141        |
| <b>Chapter 9</b>           | <b>The integrated cellular stress defense system .....</b>                                          | <b>145</b> |
| 9.1                        | Introduction .....                                                                                  | 145        |
| 9.1.1                      | Specific characteristics of the individual systems .....                                            | 145        |
| 9.1.2                      | Important stress effects .....                                                                      | 146        |
| 9.1.3                      | Cooperation and integration of systems .....                                                        | 147        |
| 9.1.3.1                    | Relationship between the stress-protein system<br>and the oxidative stress response system .....    | 147        |
| 9.1.3.2                    | Relationship between the oxidative stress response<br>system and the metallothionein system .....   | 147        |
| 9.1.3.3                    | Relationship between the metallothionein system<br>and other stress response systems .....          | 148        |
| 9.1.3.4                    | Relationship between the mixed-function oxygenase<br>system and other stress response systems ..... | 149        |
| 9.1.3.5                    | Summary .....                                                                                       | 149        |
| 9.2                        | The central hypothesis .....                                                                        | 150        |
| 9.2.1                      | Damage to proteins and enzymes .....                                                                | 150        |
| 9.2.2                      | Disturbance of redox state .....                                                                    | 151        |
| 9.2.3                      | Changes in free zinc levels .....                                                                   | 151        |
| 9.2.4                      | Effects on signal transduction systems .....                                                        | 151        |
| 9.2.5                      | Summary .....                                                                                       | 152        |
