

Contents

Introduction.....	xiii
Author	xvii
Chapter 1 Metabolic Perspective	1
1.1 System Behavior.....	1
1.2 Hierarchies of Analysis	2
1.3 Steady State	3
1.4 Pathways: Interconnected Reactions	5
1.5 Thermodynamics and Kinetics: A Metabolic Perspective	7
1.6 Short- versus Long-Term Control	9
References	10
Chapter 2 Glycolysis: The Reference Pathway	11
2.1 Definition of a Pathway	11
2.2 Canonical Glycolysis	13
2.3 Logic of Glycolysis	14
2.4 Near-Equilibrium versus Metabolic Irreversible Reactions	17
2.5 Measured Intermediates in Glycolysis	18
2.6 Energy Coupling in Glycolysis.....	19
2.7 A Pathway-Free Energy Plot for Glycolysis	20
2.8 Mobile Cofactors	22
2.9 ATP and ADP of Glycolysis.....	22
2.10 Historical View of ATP.....	23
2.11 Adenine Nucleotides.....	24
2.12 Redox Cofactors of Glycolysis: NAD and NADH	25
2.13 Inorganic Phosphate as a Mobile Cofactor	26
2.14 Total versus Free Concentrations	26
2.15 Nucleotides Other than Adenine	27
2.16 Glycolysis Has Connections	28
References	28
Endnotes	31
Chapter 3 Mitochondria and Energy Production	33
3.1 The Mitochondrial Outer Membrane	33
3.2 Exchanges Across the Inner Mitochondrial Membrane.....	34
3.3 Krebs Cycle Oxidizes Acetyl CoA.....	37
3.4 Pathway Substrate and Products of the Krebs Cycle.....	42
3.5 Mobile Electron Carriers Connect Cytosolic and Mitochondrial Catabolism to the Electron Transport Chain...	43

3.6	Mitchell Hypothesis.....	44
3.7	Mitochondrial States	49
3.8	Sequence of Electron Carriers.....	49
3.9	Proton Gradient Creation, Membrane Potential, and Utilization of the Δp	50
3.9.1	Complex I Essentials	51
3.9.2	Complex III	53
3.9.3	Complex IV and Its Connections to Mobile Cofactors	56
3.10	Uncoupling	57
3.10.1	Uncouplers and Weight Loss	57
3.10.2	Protein Uncouplers	57
3.11	Control of ATP Production by Mitochondria: Balance.....	58
3.12	Curious Case of the ρ^0 Cell	59
3.13	Whole-Cell Measurements of Respiration	60
	References	62
	Endnotes	66
Chapter 4	Principles of Pathway Connectivity	67
4.1	Extensive Overlap: Glycolysis and Gluconeogenesis	67
4.2	Intersecting Pathways: Glycogen Metabolism.....	69
4.3	Stereochemistry and Metabolic Connections.....	71
4.3.1	"Flip" and Metabolic Insight.....	73
4.4	Compartmentation	76
4.5	Diffusion.....	78
4.6	Metabolite Binding	79
4.7	Constancy of Cellular ATP	80
4.8	Energy Charge	81
4.9	Redox Cofactors: NAD, NADH, NADP, and NADPH	82
4.10	Is NAD a Regulator?	82
4.10.1	SIRT1	82
4.10.2	PARP	84
4.10.3	Lactate DH as Regulatory Enzyme	84
4.11	Transport.....	85
	References	86
	Endnotes	89
Chapter 5	Enzymes and Their Inhibition.....	91
5.1	Kinetic Analysis of Enzymes in a Metabolic Context	91
5.2	Reversible Inhibition.....	92
5.2.1	Competitive Inhibition	93
5.2.2	Anticompetitive (Uncompetitive) Inhibition	96
5.2.3	Mixed Inhibition (Noncompetitive)	98
5.3	Double Reciprocal Plot.....	100

44	5.4	Application of Enzyme Kinetics: Calcineurin	101
49	5.5	Irreversible Inhibition	102
49	5.6	Inhibitors Affecting Metabolic Pathways	103
50	5.7	Nonselective Inhibition	103
51	5.7.1	Class Inhibitors	103
53	5.7.2	More Nonselective Inhibitors	104
56	5.8	Transporters as Enzymes	105
57	5.8.1	Most Intracellular Transporters Are Near Equilibrium	105
57	5.8.2	Transport in the Plasma Membrane	106
57	5.9	Ion Channels	106
58	5.9.1	Na Channel	106
59	5.9.2	K Channels	107
60	5.9.3	Ca Channels	107
62	5.9.4	Cl Channels	108
66	5.10	Lipid Enzymology	108
67	5.10.1	Phospholipase A ₂	109
67	5.10.2	Protein Kinase C	110
69	5.10.2.1	Physical States of Diacylglycerol	111
71	5.10.2.2	How Diacylglycerol Activates Protein Kinase C	112
73	References		114
76	Endnotes		119
78	Chapter 6	Tissue-Specific Pathways	121
79	6.1	Liver	121
80	6.1.1	Glycogen Metabolism	122
81	6.1.2	Glycogen Synthesis	122
82	6.1.3	Glycogenolysis	123
82	6.1.4	Gluconeogenesis	124
84	6.1.4.1	Pyruvate Gluconeogenesis and Its Significance	126
84	6.1.4.2	Lag in Lactate Gluconeogenesis	128
85	6.1.4.3	Gluconeogenesis from Dihydroxyacetone and Glycerol	129
86	6.1.4.4	Gluconeogenesis from Fructose	131
89	6.1.4.5	Galactose Gluconeogenesis	133
91	6.1.5	Urea Synthesis and Nitrogen Metabolism	133
91	6.1.6	Relationship of Urea Synthesis to Gluconeogenesis	134
92	6.1.7	Glutamine and Asparagine	137
93	6.1.8	Fatty Acid Oxidation	138
96	6.1.8.1	Odd-Chain Fatty Acids	141
98	6.1.8.2	Oxidation of Unsaturated Fatty Acids	141
100	6.1.8.3	Shorter- and Longer-Chain Fatty Acids	143
	6.1.8.4	Ketone Body Formation	144

6.1.9	Fatty Acid Synthesis.....	145
6.1.10	Neutral Lipid Formation.....	146
6.1.11	Choline Metabolism.....	150
6.1.12	Relationship of Fatty Acid Oxidation to Fatty Acid Synthesis.....	151
6.1.13	Fatty Acid Metabolism and Gluconeogenesis.....	152
6.1.14	Other Hepatic Lipid Routes.....	153
6.2	Skeletal Muscle.....	154
6.2.1	Energetic Concerns of Fast Muscle.....	154
6.2.2	Effect of Insulin and Contraction on Glucose Utilization.....	155
6.2.3	Can Near-Equilibrium Enzymes Be Regulatory?....	156
6.2.4	Glycolysis.....	157
6.2.5	Energetic Concerns of Slow Muscle.....	158
6.3	Heart Metabolism.....	159
6.4	Adipose.....	161
6.4.1	Triglyceride Metabolism.....	161
6.4.2	Endocrine Function of the Adipocyte.....	162
6.4.3	PPAR-Gamma and Drug Response.....	162
6.4.4	Distinct Fat Cell Types.....	163
6.4.4.1	Subcutaneous versus Visceral Fat.....	163
6.4.4.2	Brown Fat.....	164
6.5	Intestinal Cells.....	164
6.5.1	Production and Response to Hormones.....	165
6.6	Kidney.....	166
6.6.1	Kidney Glutamine Metabolism: Acidosis Response....	167
	References.....	168
	Endnotes.....	178
Chapter 7	Cellular Signaling Systems.....	181
7.1	Cyclic AMP.....	181
7.1.1	Gluconeogenesis and cAMP.....	184
7.1.2	Features of cAMP Formation.....	185
7.2	G Proteins.....	185
7.3	Calcium Signaling.....	187
7.3.1	Ca ²⁺ Signaling in Nonexcitable Cells.....	188
7.3.2	Maintenance of Ca ²⁺ between Extracellular and Intracellular Pools.....	189
7.3.3	Store-Operated Calcium Uptake (SOCE).....	189
7.3.4	SOCE Is Universal.....	191
7.3.5	Different Hypothesis for SOCE.....	191
7.3.6	Resurrecting the Direct-Entry Model.....	192
7.3.7	Can SOCE Also Be a Signaling System?.....	194
7.3.8	Introduction to Excitation-Contraction Coupling (ECC).....	194

145	7.3.9	Why ECC Is Considered in a Metabolism Treatise	195
149	7.3.10	CICR.....	195
150	7.3.11	Model for How Ca^{2+} Release Might Be Achieved....	197
151	7.3.12	Ca^{2+} Signaling as a Pathway.....	199
152	7.3.13	ECC and the Heart	201
153	7.3.14	The Problem with Positive Feedback for Cellular Control.....	202
154	7.3.15	Why Ca^{2+} Entry Must Occur in the Heart.....	203
154	7.3.16	Hypothesis for Heart ECC	203
155	7.3.17	Triggering a Rise in Ca^{2+} in Other Cell Types	205
156	7.4	AMP as a Cellular Signal	205
157	7.4.1	AMP-Activated Kinase (AMPK).....	207
158	7.5	Diacylglycerol and Protein Kinase C	209
159	7.6	Are ATP and NAD Regulators of Metabolism?.....	210
161	7.6.1	ATP	210
161	7.6.2	NAD	211
162	7.7	Oxidants and Cellular Regulation	212
162	References		212
162	Endnotes		217
163			
163	Chapter 8	Pathways and Energy Contributions	221
164	8.1	Creatine Phosphokinase System.....	221
165	8.2	Using the Creatine Phosphate Reaction <i>In Vivo</i> and in Cells: Creatine Phosphate Recovery.....	222
166	8.3	Energy Estimates Using Isolated Mitochondria.....	224
167	8.4	Energy Estimates by Direct Oxygen Consumption in Intact Cells.....	225
168	8.5	Overlap of Energy and Signaling	227
178	8.6	Catabolism and Anabolism Reconsidered.....	228
181	8.7	ρ^0 Cell: A Cell Engineered to Have No Mitochondrial Energy Formation.....	228
181	References		229
184	Endnote		231

185			
187	Chapter 9	Computer Modeling Studies in Metabolism	233
188	9.1	Databases.....	233
189	9.2	Flux Modeling of Pathways and Metabolic Control Analysis	235
189	9.3	Metabolic Control Analysis.....	235
191	9.4	Metabolomics	236
191	9.4.1	Metabolite Dataset.....	237
192	9.4.2	Results from Commercial Vendors	237
194	9.4.3	Independent Laboratories.....	238
194	9.4.4	Protein-Protein Interactions	238

References	238
Endnote.....	240
Chapter 10 Medical Issues Related to Metabolism.....	241
10.1 Diabetes and Metformin.....	241
10.1.1 Metformin and AMPK.....	241
10.1.2 Commonly Accepted Mechanism for Metformin: Inhibition of Mitochondrial Complex I.....	242
10.1.3 Measuring Cellular ATP Production in Response to Metformin	243
10.1.4 Possible Target for Metformin: AMP Deaminase....	244
10.1.5 Free versus Bound AMP	245
10.2 Metformin for Other Diseases.....	246
10.3 Cancer and Metabolism.....	246
10.4 Epilepsy and the Ketogenic Diet	246
10.5 Microbiome and Metabolic Syndrome.....	250
10.6 Inborn Errors	250
