Contents

Preface vii
Author ix

Module I Basics of Proteins and Proteomics

1. Basics of Amino Acids and Proteins 3
2. Protein Chemistry to Proteomics 13

Module II Gel-Based Proteomics Techniques

3. Gel-Based Proteomics 25
4. 2D Difference Gel Electrophoresis (2D-DIGE) 45
5. Gel-Based Proteomic Data Analysis 55

Module III Basics of Mass Spectrometry and Quantitative Proteomics

6. Introduction to Mass Spectrometry 79
7. Hybrid Mass Spectrometry Configurations 91
8. Tandem Mass Spectrometry for Protein Identification 99
9. *In Vitro* Quantitative Proteomics Using iTRAQ 111
10. *In Vivo* Quantitative Proteomics Using SILAC 123

Module IV Interactomics: Basics and Application

11. Introduction to Interactomics 135
12. Antigen and Antibody Microarrays 145
13. Cell-Free Expression-Based Protein Microarrays 161
14. Nucleic Acid Programmable Protein Arrays 177
15. Label-Free Proteomics 189

16. Surface Plasmon Resonance 205

17. Surface Plasmon Resonance Imaging 215

18. Protein Interaction Analysis Using SPR and SPRi 221

Module V Advancements in Proteomics

19. Proteomics for Translational Research 231

20. Future of Proteomics for Clinical Applications 243

21. Challenges in Clinical Proteomics 251

Index 259
