

Contents

Preface	v
1. Development: Organisms Construct and Organize Themselves on the Basis of Inherited Information	1
2. Basic Stages, Principles, and Terms of Developmental Biology	9
3. Model Organisms in Developmental Biology	21
4. Comparative Review: The Phylotypic Stage of Vertebrates, Common versus Distinct Features, and Aspects of Evolution	122
5. The Egg Cell and the Sperm Get a Dowry	137
6. The Start: Fertilization and Activation of the Egg	146

7. Precisely Patterned Cleavage Divisions Are Driven by an Oscillator	156
8. Determination: Cells Are Programmed and Committed to Their Fates	160
9. Epigenetic Pattern Formation: New Patterns Are Created During Development	165
10. Differentiation Is Based upon Differential Gene Expression that Is Programmed during Determination	202
11. Cell Differentiation Frequently Is Irreversible and Causes Cell Death; Early Cell Death Can Be Programmed	222
12. Animal Morphogenesis Is Shaped Actively by Adhesion and Cell Migration	228
13. Cell Journeys: Even Germ Cells and Cells of the Peripheral Nervous System Originate from Emigrant Precursors	235
14. Development of the Nervous System: Cell Migration, Pathfinding, and Self-Organization	242
15. Heart and Blood Vessels: Divergent Developmental Roads but One System in the End	257
16. Stem Cells Enable Continuous Growth and Renewal	263
17. Signal Molecules Control Development and Growth	274
18. Cancer Comes from Disturbed Growth and Differentiation Control	282
19. Metamorphosis: A Second Embryogenesis Creates a Second Phenotype	289
20. Sex and the Single Gene	301

21.	Regeneration and Renewal versus Loss and Death	310
22.	Life and Death: What Is the Major Mystery?	323
	Bibliography	335
	Index	373

Boxes

Box 1	History: From the Soul to Information	3
Box 2	Famous Experiments with Eggs and Embryos: Cloning, Chimeras, Teratomas, and Transgenic Mice	106
Box 3	The PI Signal Transduction System	153
Box 4	Models of Biological Pattern Formation	184
Box 5	Signal Molecules Acting through Nuclear Receptors	200
Box 6	How Cells Communicate and Interact	271
Box 7	Contemporary Techniques in Developmental Biology	330
