Preface xiv

Prologue: Why Study Human Evolution? xix

Part One • How Evolution Works

CHAPTER 1 • Adaptation by Natural Selection 2

Explaining Adaptation before Darwin 2

Darwin's Theory of Adaptation 4

Darwin's Postulates 4

An Example of Adaptation by Natural Selection 5

Individual Selection 9

The Evolution of Complex Adaptations 11

Why Small Variations Are Important 11

Why Intermediate Steps Are Favored by Selection 13

Rates of Evolutionary Change 15

Darwin's Difficulties Explaining Variation 19

CHAPTER 2 • Genetics 22

Mendelian Genetics 22

Cell Division and the Role of Chromosomes in Inheritance 23

Mitosis and Meiosis 25

Chromosomes and Mendel's Experimental Results 26

Linkage and Recombination 30

A Closer Look 2.1 • More on Recombination 31

Molecular Genetics 34

Genes Are DNA 35

Some Genes Code for Proteins 37

Regulatory Sequences Control Gene Expression 43

Not All DNA Carries a Message 45

CHAPTER 3 • The Modern Synthesis 48

Population Genetics	48
Genes in Populations	49
How Random Mating and Sexual Reproduction Change Genotypic Frequencies	50
How Natural Selection Changes Gene Frequencies	53
A Closer Look 3.1 • Genotypic Frequencies after Two Generations of Random Mating	53
The Modern Synthesis	54
The Genetics of Continuous Variation	54
How Variation Is Maintained	57
Natural Selection and Behavior	59
Constraints on Adaptation	62
Correlated Characters	62
Disequilibrium	64
Genetic Drift	65
Local versus Optimal Adaptations	68
A Closer Look 3.2 • The Geometry of Area/Volume Ratios	70
Other Constraints on Evolution	71

CHAPTER 4 • Speciation and Phylogeny 74

What Are Species?	74
The Biological Species Concept	76
The Ecological Species Concept	77
The Origin of Species	79
Allopatric Speciation	80
Parapatric and Sympatric Speciation	83
The Tree of Life	84
Why Reconstruct Phylogenies?	87
A Closer Look 4.1 • The Role of Phylogeny in the Comparative Method	89
How to Reconstruct Phylogenies	90
Problems Due to Convergence	91
Problems Due to Ancestral Characters	92
Using Genetic-Distance Data to Date Phylogenetic Events	94
Taxonomy: Naming Names	96

Part Two • Primate Ecology and Behavior

CHAPTER 5 • Primate Diversity and Ecology 102

Two Reasons to Study Primates 102

Primates Are Our Closest Relatives 103

Primates Are a Diverse Order 103

Features That Define the Primates 104

Primate Biogeography 107

A Closer Look 5.1 • Teeth And Guts: You Are What You Can Chew 108

A Taxonomy of Living Primates 110

Primate Diversity 111

The Strepsirrhines 111

The Haplorrhines 112

Primate Ecology 118

The Distribution of Food 118

Activity Patterns 123

Ranging Behavior 123

Predation 126

Primate Sociality 128

Primate Conservation 128

A Closer Look 5.2 • Forms of Social Groups among Primates 129

CHAPTER 6 • Primate Mating Systems 135

The Language of Adaptive Explanations 136

The Evolution of Reproductive Strategies 137

Reproductive Strategies of Females 139

Sources of Variation in Female Reproductive Performance 139

A Closer Look 6.1 • Dominance Hierarchies 142

Reproductive Trade-offs 145

Sexual Selection and Male Mating Strategies 146

Intrasexual Selection 148

Male Reproductive Tactics 150

Investing Males 150

Male-Male Competition in Groups without Pair Bonds 151

Infanticide 155

CHAPTER 7 • The Evolution of Cooperation 159

Altruism: A Puzzle 159

Mutualism 160

The Problem with Group-Level Explanations 161

Kin Selection 162

A Closer Look 7.1 • Group Selection 164

Hamilton's Rule 164

Kin Recognition 166

Kin Biases in Behavior 167

A Closer Look 7.2 • How Relationships Are Maintained 168

Parent–Offspring Conflict 172

Reciprocal Altruism 173

CHAPTER 8 • Primate Life Histories and the Evolution of Intelligence 177

Big Brains and Long Lives 177

Life History Theory 178

Selective Pressures Favoring Large Brains in Monkeys and Apes 181

What Do Monkeys Know about One Another? 184

The Value of Studying Primate Behavior 191

Part Three • The History of the Human Lineage

CHAPTER 9 • From Tree Shrew to Ape 194

Continental Drift and Climate Change 196

The Methods of Paleontology 198

A Closer Look 9.1 • Using Deep-Sea Cores to Reconstruct Ancient Climates 199

The Evolution of the Early Primates 201

The First Haplorrhines 206

A Closer Look 9.2 • Facts That Teeth Can Reveal 208

The Emergence of the Hominoids 210

A Closer Look 9.3 • Missing Links 211

CHAPTER 10 • From Hominoid to Hominin 219

At the Beginning 220

Sahelanthropus tchadensis 220

A Closer Look 10.1 • What It Takes to Be a Biped 221

Orrorin tugenensis 223

Ardipithecus 224

Ar. kadabba 224

Ar. ramidus 224

The Adaptive Advantages of Bipedalism 228

The Hominin Community Diversifies 230

Australopithecus 231

Au. anamensis 231

Au. afarensis 232

Au. africanus 237

Au. garhi 239

Au. sediba 239

Paranthropus 240

Kenyanthropus 243

Hominin Phylogenies 244

CHAPTER 11 • Oldowan Toolmakers and the Origin of Human Life History 247

The Oldowan Toolmakers 247

A Closer Look 11.1 • Ancient Toolmaking and Tool Use 250

Complex Foraging Shapes Human Life History 250

A Closer Look 11.2 • Why Meat Eating Favors Food Sharing 255

Evidence for Complex Foraging by Oldowan Toolmakers 257

Archaeological Evidence for Meat Eating 259

Hunters or Scavengers? 262

Domestic Lives of Oldowan Toolmakers 264

Back to the Future: The Transition to Modern Human Life Histories 266

CHAPTER 12 • From Hominin to *Homo* 268

Early *Homo* 269

Homo ergaster 270

Morphology 272

Tools and Subsistence 274

Dispersal Out of Africa 278

Eastern Asia: *Homo erectus* 279

Hominins of the Early Middle Pleistocene (900 to 300 kya)	281
Africa and Western Eurasia: <i>Homo heidelbergensis</i>	284
Hominins of the Later Pleistocene (300 to 50 kya)	286
Eastern Eurasia: <i>Homo erectus</i> and <i>Homo heidelbergensis</i>	286
Western Eurasia: The Neanderthals	289
Africa: The Road to <i>Homo sapiens</i> ?	296
The Sources of Change	297
The Muddle in the Middle	298

CHAPTER 13 • *Homo sapiens* and the Evolution of Modern Human Behavior 302

Morphological Features of Modern <i>Homo sapiens</i>	303
Genetic Features of Modern <i>Homo sapiens</i>	304
Archaeological Evidence for Modern Human Behavior	307
Upper Paleolithic Technology and Culture	309
The Origin and Spread of Modern Humans	315
Genetic Data	315
A Closer Look 13.1 • Mitochondrial Eve	321
Evidence from Fossils and Tool Kits	327
Modern Human Behavior: Revolution or Evolution?	329
The African Archaeological Record during the Later Pleistocene	329
How Modern Human Behavior Evolved	334

Part Four • Evolution and Modern Humans

CHAPTER 14 • Human Genetic Variation 338

Explaining Human Variation	338
Variation in Traits Influenced by Single Genes	341
Causes of Genetic Variation within Groups	343
A Closer Look 14.1 • Calculating Gene Frequencies for a Balanced Polymorphism	344
Causes of Genetic Variation among Groups	345
Variation in Complex Phenotypic Traits	353
Genetic Variation within Groups	354
Genetic Variation among Groups	355
The Race Concept	358

CHAPTER 15 • Evolution and Human Behavior 366

Why Evolution Is Relevant to Human Behavior 366

Understanding How We Think 368

Inbreeding Avoidance 370

A Closer Look 15.1 • Why Inbred Matings Are Bad News 371

Human Language 374

Evolution and Human Culture 378

Culture Is a Derived Trait in Humans 378

Culture Is an Adaptation 381

A Closer Look 15.2 • Understanding the Sources of Behavioral Variation 382

CHAPTER 16 • Human Mate Choice and Parenting 389

The Psychology of Human Mate Preferences 390

Some Social Consequences of Mate Preferences 398

Kipsigis Bridewealth 398

Nyinba Polyandry 400

Raising Children 402

Parenting Effort and Mating Effort 403

Grandparental Care 405

Discriminative Parental Solicitude 406

Prenatal Investment 406

Infanticide 407

Adoption 409

Is Human Evolution Over? 411

Epilogue: There Is Grandeur in This View of Life 415

Appendix: The Skeletal Anatomy of Primates A1

Glossary A3

Credits A15

Index A19
