

BRIEF CONTENTS

eTopic Contents	xix
Preface	xxi
About the Authors	xxxiii

PART 1

The Microbial Cell 2

- 1 Microbial Life: Origin and Discovery 5
- 2 Observing the Microbial Cell 41
- 3 Cell Structure and Function 79
- 4 Bacterial Culture, Growth, and Development 119
- 5 Environmental Influences and Control of Microbial Growth 157
- 6 Viruses 191

PART 2

Genes and Genomes 234

- 7 Genomes and Chromosomes 237
- 8 Transcription, Translation, and Bioinformatics 275
- 9 Gene Transfer, Mutations, and Genome Evolution 321
- 10 Molecular Regulation 365
- 11 Viral Molecular Biology 409
- 12 Biotechniques and Synthetic Biology 457

PART 3

Metabolism and Biochemistry 488

- 13 Energetics and Catabolism 491
- 14 Electron Flow in Organotrophy, Lithotrophy, and Phototrophy 539
- 15 Biosynthesis 585
- 16 Food and Industrial Microbiology 623

PART 4

Microbial Diversity and Ecology 662

- 17 Origins and Evolution 665
- 18 Bacterial Diversity 711
- 19 Archaeal Diversity 757
- 20 Eukaryotic Diversity 797
- 21 Microbial Ecology 839
- 22 Microbes in Global Elemental Cycles 889

PART 5

Medicine and Immunology 922

- 23 Human Microbiota and Innate Immunity 925
- 24 The Adaptive Immune Response 961
- 25 Microbial Pathogenesis 1003
- 26 Microbial Diseases 1051
- 27 Antimicrobial Therapy 1107
- 28 Clinical Microbiology and Epidemiology 1147

APPENDIX 1: Biological Molecules A-1

APPENDIX 2: Introductory Cell Biology: Eukaryotic Cells A-23

APPENDIX 3: Laboratory Methods for Microbiology A-43

APPENDIX 4: Taxonomy A-59

About the Authors	xxxiii

PART 1 The Microbial Cell

AN INTERVIEW WITH RICHARD LENSKI:
Evolution in the Lab

CHAPTER 1

Microbial Life: Origin and Discovery..... 5

- 1.1 From Germ to Genome: What Is a Microbe? 7
- 1.2 Microbes Shape Human History 10
- Special Topic 1.1: How Did Life Originate?** 18
- 1.3 Medical Microbiology 20
- 1.4 Microbial Ecology 26
- 1.5 The Microbial Family Tree 29
- 1.6 Cell Biology and the DNA Revolution 32

CHAPTER 2

Observing the Microbial Cell..... 41

- 2.1 Observing Microbes 42
- 2.2 Optics and Properties of Light 46
- 2.3 Bright-Field Microscopy 51
- 2.4 Fluorescence Microscopy 58
- 2.5 Dark-Field and Phase-Contrast Microscopy 63
- 2.6 Electron Microscopy and Tomography 66
- 2.7 Visualizing Molecules 73
- Special Topic 2.1: Molecular "Snapshots": Chemical Imaging** 74

CHAPTER 3

Cell Structure and Function79

- 3.1 The Bacterial Cell: An Overview 81
- 3.2 The Cell Membrane and Transport 86
- 3.3 The Cell Wall and Outer Layers 91
- 3.4 The Nucleoid, RNA, and Protein Synthesis 101
- 3.5 Cell Division 104
- 3.6 Cell Polarity and Aging 107
 - Special Topic 3.1: Senior Cells Make Drug-Resistant Tuberculosis** 108
- 3.7 Specialized Structures 112

CHAPTER 4

Bacterial Culture, Growth, and Development.....119

- 4.1 Microbial Nutrition 120
- 4.2 Nutrient Uptake 127
- 4.3 Culturing Bacteria 133
- 4.4 Counting Bacteria 136
- 4.5 The Growth Cycle 139
- 4.6 Biofilms 145
 - Special Topic 4.1: Sharks and Biofilms Don't Mix** 146
- 4.7 Cell Differentiation 150

CHAPTER 5

Environmental Influences and Control of Microbial Growth.....157

- 5.1 Environmental Limits on Growth 158
- 5.2 Adaptation to Temperature 160
 - Special Topic 5.1: It's Raining Bacteria** 163
- 5.3 Adaptation to Pressure 164
- 5.4 Water Activity and Salt 166
- 5.5 Adaptation to pH 167
- 5.6 Oxygen and Other Electron Acceptors 172
- 5.7 Nutrient Deprivation and Starvation 176
- 5.8 Physical, Chemical, and Biological Control of Microbes 178

CHAPTER 6

Viruses.....191

- 6.1 What Is a Virus? 192
- 6.2 Virus Structure 198
- 6.3 Viral Genomes and Classification 203
- 6.4 Bacteriophage Replication 208
- 6.5 Animal and Plant Virus Replication 213

- 6.5 Culturing Viruses 221
Special Topic 6.1: The Good Viruses 226
 6.7 Viral Ecology 226

PART 2

Genes and Genomes 234

AN INTERVIEW WITH CHRISTINE JACOBS-WAGNER:
The Thrill of Discovery in Molecular Microbiology

CHAPTER 7

Genomes and Chromosomes.....237

- 7.1 DNA: The Genetic Material 238
 7.2 Genome Organization 240
 7.3 DNA Replication 248
 7.4 Plasmids 258
 7.5 Eukaryotic Chromosomes 260
 7.6 DNA Sequence Analysis 263
Special Topic 7.1: Where Have All the Bees Gone? Metagenomics, Pyrosequencing, and Nature 268

CHAPTER 8

Transcription, Translation, and Bioinformatics275

- 8.1 RNA Polymerases and Sigma Factors 276
 8.2 Transcription of DNA to RNA 280
 8.3 Translation of RNA to Protein 286
Special Topic 8.1: Stalking the Lone Ribosome 298
 8.4 Protein Modification and Folding 303
 8.5 Protein Degradation: Cleaning House 304
 8.6 Secretion: Protein Traffic Control 306
 8.7 Bioinformatics: Mining the Genomes 312

CHAPTER 9

Gene Transfer, Mutations, and Genome Evolution321

- 9.1 The Mosaic Nature of Genomes 322
 9.2 Gene Transfer 322
Special Topic 9.1: There's a Bacterial Genome Hidden in My Fruit Fly 330

- 9.3 Recombination 338
- 9.4 Mutations 341
- 9.5 DNA Repair 348
- 9.6 Mobile Genetic Elements 355
- 9.7 Genome Evolution 358

CHAPTER 10

Molecular Regulation 365

- 10.1 Regulating Gene Expression 366
- 10.2 Paradigm of the Lactose Operon 369
- 10.3 Other Systems of Operon Control 376
- 10.4 Sigma Factor Regulation 382
- 10.5 Regulatory RNAs 385
- 10.6 DNA Rearrangements: Phase Variation by Shifty Pathogens 389
- 10.7 Integrated Control Circuits 391
- 10.8 Quorum Sensing: Chemical Conversations 397
- 10.9 Transcriptomics and Proteomics 401
- Special Topic 10.1: Networking with Nanotubes** 402

CHAPTER 11

Viral Molecular Biology 409

- 11.1 Phage T4: The Classic Molecular Model 410
- 11.2 Hepatitis C: (+) Strand RNA Virus 417
- 11.3 Influenza Virus: (-) Strand RNA Virus 424
- 11.4 Human Immunodeficiency Virus (HIV): Retrovirus 432
- 11.5 Herpes Simplex Virus: DNA Virus 443
- Special Topic 11.1: Cytomegalovirus** 448
- 11.6 Gene Therapy with Viruses 450

CHAPTER 12

Biotechniques and Synthetic Biology 457

- 12.1 Basic Tools of Biotech: A Research Case Study 458
- 12.2 Genetic Analyses 458
- 12.3 Classic Molecular Techniques 463
- 12.4 Viewing the Interactions and Movements of Proteins 471
- 12.5 Applied Biotechnology 474
- 12.6 Synthetic Biology: Biology by Design 477
- Special Topic 12.1: Bacteria "Learn" to Keep Time and Signal Danger** 478

PART 3

Metabolism and Biochemistry 488

AN INTERVIEW WITH DAN WOZNAK:

Polymer Biosynthesis Makes a Pathogenic Biofilm

CHAPTER 13

Energetics and Catabolism 491

- 13.1 Energy and Entropy for Life 494
- 13.2 Energy in Biochemical Reactions 498
- 13.3 Energy Carriers and Electron Transfer 501
- Special Topic 13.1:** Microbial Syntrophy Cleans Up Oil 502
- 13.4 Catabolism: The Microbial Buffet 510
- 13.5 Glucose Breakdown and Fermentation 516
- 13.6 The Tricarboxylic Acid (TCA) Cycle 527
- 13.7 Aromatic Pollutants 532

CHAPTER 14

Electron Flow in Organotrophy, Lithotrophy, and Phototrophy 539

- 14.1 Electron Transport Systems 541
- 14.2 The Proton Motive Force 546
- Special Topic 14.1:** Testing the Chemiosmotic Theory 548
- 14.3 The Respiratory ETS and ATP Synthase 551
- 14.4 Anaerobic Respiration in Organotrophs 559
- Special Topic 14.2:** Bacterial Electric Power 562
- 14.5 Lithotrophy and Methanogenesis 563
- 14.6 Phototrophy 571

CHAPTER 15

Biosynthesis 585

- 15.1 Overview of Biosynthesis 586
- 15.2 CO₂ Fixation: The Calvin Cycle 589
- 15.3 CO₂ Fixation: Diverse Pathways 597
- 15.4 Biosynthesis of Fatty Acids and Polyketides 601
- 15.5 Nitrogen Fixation 605
- Special Topic 15.1:** Mining a Bacterial Genome for Peptide Antibiotics 606
- 15.6 Biosynthesis of Amino Acids and Nitrogenous Bases 612
- 15.7 Biosynthesis of Tetrapyrroles 618

CHAPTER 16

Food and Industrial Microbiology.....623

- 16.1 Microbes as Food 625
- 16.2 Fermented Foods: An Overview 627
- 16.3 Acid- and Alkali-Fermented Foods 629
- 16.4 Ethanol Fermentation: Bread and Wine 637
- 16.5 Food Spoilage and Preservation 641
- 16.6 Industrial Microbiology 650
 - Special Topic 16.1:** Companies Take On Tuberculosis 652
 - Special Topic 16.2:** Microbial Enzymes Make Money 654

PART 4

Microbial Diversity and Ecology 66

AN INTERVIEW WITH NICOLE DUBILIER:

Marine Animals with Bacterial Symbionts

CHAPTER 17

Origins and Evolution.....66

- 17.1 Origins of Life 667
- 17.2 Early Metabolism 676
- 17.3 Microbial Phylogeny and Gene Transfer 681
 - Special Topic 17.1:** Phylogeny of a Shower Curtain Biofilm 686
- 17.4 Adaptive Evolution 692
- 17.5 Microbial Species and Taxonomy 696
 - Special Topic 17.2:** Jump-Starting Evolution of a Hyperthermophilic Enzyme 698
- 17.6 Symbiosis and the Origin of Mitochondria and Chloroplasts 703

CHAPTER 18

Bacterial Diversity.....711

- 18.1 Bacterial Diversity at a Glance 712
- 18.2 Cyanobacteria: Oxygenic Phototrophs 718
- 18.3 Firmicutes and Actinobacteria (Gram-Positive) 723
- 18.4 Proteobacteria (Gram-Negative) 734
 - Special Topic 18.1:** Carbon Monoxide: Food for Bacteria? 738
- 18.5 Deep-Branching Gram-Negative Phyla 748
- 18.6 Spirochetes: Sheathed Spiral Cells with Internalized Flagella 750
- 18.7 Chlamydiae, Planctomycetes, and Verrucomicrobia: Irregular Cells 752

CHAPTER 19	Archaeal Diversity	757
19.1	Archaeal Traits	758
19.2	Crenarchaeota across the Temperature Range	766
19.3	Thaumarchaeota: Symbionts and Ammonia Oxidizers	773
19.4	Methanogens	775
	Special Topic 19.1: Eating Ammonia: Thaumarchaeotes	776
19.5	Haloarchaea	784
	Special Topic 19.2: Haloarchaea in the Classroom	786
19.6	Thermophilic and Acidophilic Euryarchaeota	790
19.7	Deeply Branching Divisions	793
CHAPTER 20	Eukaryotic Diversity	797
20.1	Phylogeny of Eukaryotes	798
20.2	Fungi	806
	Special Topic 20.1: Yeast: A Single-Celled Human Brain?	810
20.3	Algae	818
20.4	Amebas and Slime Molds	824
20.5	Alveolates: Ciliates, Dinoflagellates, and Apicomplexans	827
20.6	Trypanosomes and Metamonads	833
	Special Topic 20.2: The Trypanosome: A Shape-Shifting Killer	834
CHAPTER 21	Microbial Ecology	839
21.1	Metagenomes—and Beyond	841
21.2	Functional Ecology	849
21.3	Symbiosis	852
21.4	Marine and Aquatic Microbes	857
	Special Topic 21.1: Cleaning Up the Deepwater Oil Spill	858
21.5	Soil and Subsurface Microbes	869
21.6	Plant Microbial Communities	876
21.7	Animal Microbial Communities	882
CHAPTER 22	Microbes in Global Elemental Cycles	889
22.1	Biogeochemical Cycles	890
22.2	The Carbon Cycle and Bioremediation	894
22.3	The Hydrologic Cycle and Wastewater Treatment	896
	Special Topic 22.1: Bioremediation of Weapons Waste	902
22.4	The Nitrogen Cycle	903
22.5	Sulfur, Phosphorus, and Metals	908
22.6	Astrobiology	916

PART 5

Medicine and Immunology

922

AN INTERVIEW WITH FERRIC FANG:

Molecular Microbiology Dissects a Pathogen

CHAPTER 23

Human Microbiota and Innate Immunity.....925

- 23.1 Human Microbiota: Location and Shifting Composition 926
- 23.2 Risks and Benefits of Microbiota 934
- 23.3 Overview of the Immune System 935
 - Special Topic 23.1:** Are NETs a Cause of Lupus? 940
- 23.4 Barbarians at the Gate: Innate Host Defenses 943
- 23.5 The Acute Inflammatory Response 946
- 23.6 How Phagocytes Detect and Kill Microbes 950
- 23.7 Interferon, Natural Killer Cells, and Toll-like Receptors 953
- 23.8 Complement's Role in Innate Immunity 955
- 23.9 Fever 958

CHAPTER 24

The Adaptive Immune Response.....961

- 24.1 Overview of Adaptive Immunity 962
- 24.2 Immunogenicity 965
- 24.3 Antibody Structure and Diversity 968
- 24.4 Primary and Secondary Antibody Responses 974
- 24.5 Genetics of Antibody Production 977
- 24.6 T Cells Link Antibody and Cellular Immune Systems 982
- 24.7 Complement as Part of Adaptive Immunity 992
 - Special Topic 24.1:** An Uneasy Peace: Détente at the Microbiota-Intestine Interface 994
- 24.8 Hypersensitivity and Autoimmunity 995

CHAPTER 25

Microbial Pathogenesis.....1003

- 25.1 Host-Pathogen Interactions 1004
- 25.2 Virulence Factors and Pathogenicity Islands 1010
- 25.3 Microbial Attachment: First Contact 1013
- 25.4 Toxins Subvert Host Function 1018

25.5	Deploying Toxins and Effectors	1028
25.6	Surviving within the Host	1033
	Special Topic 25.1: Type VI Secretion: Poison Darts	1034
25.7	Experimental Tools That Define Pathogenesis	1045

CHAPTER 26

Microbial Diseases 1051

26.1	Characterizing and Diagnosing Microbial Diseases	1052
26.2	Skin and Soft-Tissue Infections	1054
26.3	Respiratory Tract Infections	1058
26.4	Gastrointestinal Tract Infections	1066
	Special Topic 26.1: Sprouts and an Emerging <i>Escherichia coli</i>	1068
26.5	Genitourinary Tract Infections	1075
26.6	Central Nervous System Infections	1083
26.7	Cardiovascular System Infections	1090
26.8	Systemic Infections	1094
26.9	Immunization	1102

CHAPTER 27

Antimicrobial Therapy 1107

27.1	The Golden Age of Antibiotic Discovery	1108
27.2	Fundamentals of Antimicrobial Therapy	1111
27.3	Measuring Drug Susceptibility	1112
27.4	Mechanisms of Action	1116
27.5	Challenges of Drug Resistance	1126
27.6	The Future of Drug Discovery	1134
27.7	Antiviral Agents	1135
	Special Topic 27.1: Anti-Quorum Sensing Drug Blocks Pathogen "Control and Command"	1136
	Special Topic 27.2: Resurrecting the 1918 Pandemic Flu Virus	1139
27.8	Antifungal Agents	1142

CHAPTER 28

Clinical Microbiology and Epidemiology 1147

28.1	Principles of Clinical Microbiology	1148
28.2	Specimen Collection and Processing	1149
28.3	Conventional Approaches to Pathogen Identification	1152
28.4	Rapid Techniques for Pathogen Identification	1160
28.5	Point-of-Care Rapid Diagnostics	1167
28.6	Biosafety Containment Procedures	1169
28.7	Principles of Epidemiology	1171
	Special Topic 28.1: What's Blowing in the Wind?	1178
28.8	Detecting Emerging Microbial Diseases	1179

APPENDIX 1

Biological Molecules.....A-1

- A1.1** Elements, Bonding, and Water A-2
- A1.2** Organic Molecules A-6
- A1.3** Proteins A-8
- A1.4** Carbohydrates A-11
- A1.5** Nucleic Acids A-13
- A1.6** Lipids A-15
- A1.7** Biological Chemistry A-16

Special Topic A1.1: Calculating the Standard Free Energy Change, ΔG° , of Chemical Reactions A-19

APPENDIX 2

Introductory Cell Biology: Eukaryotic Cells.....A-23

- A2.1** The Cell Membrane A-24
- A2.2** The Nucleus and Mitosis A-31
- A2.3** Problems Faced by Large Cells A-34
- A2.4** The Endomembrane System A-34
- A2.5** The Cytoskeleton A-38
- A2.6** Mitochondria and Chloroplasts A-40

APPENDIX 3

Laboratory Methods for Microbiology.....A-43

- A3.1** Isolating Parts of Cells by Using an Ultracentrifuge A-44
- A3.2** Agarose Gel Electrophoresis A-45
- A3.3** Protein Identification on 2D Gels with Mass Spectrometry A-47
- A3.4** RNA and DNA Identification by Northern and Southern Blots A-49
- A3.5** Sanger Method of DNA Sequencing A-51
- A3.6** Gene Fusions Identify Regulatory Mutants A-52
- A3.7** Primer Extension Identifies Transcriptional Start Sites A-52
- A3.8** DNA Microarray A-54
- A3.9** Multiplex PCR A-55
- A3.10** Fluorescence In Situ Hybridization (FISH) and CARD-FISH A-55
- A3.11** Immunoprecipitation Techniques A-57

APPENDIX 4

Taxonomy.....A-59

- A4.1** Viruses A-60
- A4.2** Bacteria A-62
- A4.3** Archaea A-66
- A4.4** Eukarya A-68

Answers to Thought Questions AQ-1

eTOPIC CONTENTS

Access to the eTopics is available through both the ebook and the Norton Coursepack.

- 1.1** An Interview with Rita Colwell: The Global Impact of Microbiology
- 1.2** Discovering the Genetic Code
- 1.3** Clifford W. Houston: From Aquatic Pathogens to Outer Space—An Interview
- 2.1** Confocal Microscopy
- 3.1** Isolation and Analysis of the Ribosome
- 3.2** How Antibiotics Cross the Outer Membrane
- 3.3** Outer Membrane Proteins: Isolation for Vaccine
- 3.4** Experiments That Reveal the Bacterial Cytoskeleton
- 4.1** Transport by Group Translocation: The Phosphotransferase System
- 4.2** Eukaryotes Transport Nutrients by Endocytosis
- 4.3** Biofilms, Antibiotics, Garlic, and Disease
- 5.1** The Arrhenius Equation
- 5.2** Some Alkaliphilic Enzymes Produce Useful Drug Delivery Systems
- 5.3** Signaling Virulence
- 5.4** Oligotrophs
- 6.1** How Did Viruses Originate?
- 6.2** West Nile Virus, an Emerging Pathogen
- 7.1** Genes and Proteins Involved in DNA Replication
- 7.2** Trapping a Sliding Clamp
- 7.3** Replication Mechanisms of Bacteriophages
- 7.4** Plasmid Partitioning and Addiction
- 7.5** Equilibrium Density Gradient Centrifugation
- 8.1** Building the Ribosome Machine
- 8.2** Discovering the mRNA Ribosome-Binding Site
- 8.3** Ubiquitination: A Ticket to the Proteasome
- 8.4** What Is the Minimal Genome?
- 9.1** F Pili and Biofilm Formation
- 9.2** Mapping Bacterial Chromosome Gene Position by Conjugation
- 9.3** *Deinococcus* Uses RecA to Repair Fragmented Chromosomes
- 9.4** Mutation Rate
- 9.5** The Transposase for a Bacterial Transposon Resembles the Integrase for HIV-1
- 9.6** Integrins and Gene Capture
- 10.1** CRP Interactions with RNA Polymerase and CRP-Dependent Promoters
- 10.2** Glucose Transport Alters cAMP Levels
- 10.3** Slipped-Strand Mispairing
- 10.4** Toxin-Antitoxin Modules: Mechanisms for Self-preservation or Altruism?
- 10.5** The Phage Lambda Lysis/Lysogeny “Decision” Is to Kill or Not to Kill
- 11.1** Poliovirus: (+) Strand RNA
- 11.2** The Filamentous Phage M13: Vaccines and Nanowires
- 11.3** Genetic Resistance to HIV
- 12.1** Mapping the *E. coli* Interactome
- 12.2** GFP Proteins Track Cell Movements in Biofilms
- 12.3** DNA Vaccines
- 12.4** Gene Therapy and Gene Delivery Systems
- 12.5** Directed Evolution through Phage Display Technology
- 12.6** DNA Shuffling Enables In Vitro Evolution
- 12.7** Site-Directed Mutagenesis Helps Us Probe Protein Function
- 13.1** Observing Energy Carriers in Living Cells
- 13.2** Swiss Cheese: A Product of Bacterial Catabolism
- 13.3** Genomic Analysis of Metabolism
- 13.4** Pyruvate Dehydrogenase Connects Sugar Catabolism to the TCA Cycle
- 13.5** Genetic Analysis of Aromatic Catabolism
- 14.1** Caroline Harwood: A Career in Bacterial Photosynthesis and Biodegradation: An Interview
- 14.2** Measuring Dy and DpH in Microbes by the Uptake of Molecules
- 14.3** Environmental Regulation of the ETS
- 14.4** ATP Synthesis at High pH
- 15.1** The Discovery of ^{14}C
- 15.2** Metagenomic Screening for Polyketide Drugs
- 15.3** Antibiotic Factories: Modular Biosynthesis of Vancomycin
- 15.4** Riboswitch Regulation
- 16.1** From Barley and Hops to Beer
- 16.2** Caterpillar Viruses Produce Commercial Products
- 17.1** The RNA World: Clues for Modern Medicine
- 17.2** Horizontal Gene Transfer in *E. coli* O157:H7
- 17.3** Leaf-cutter Ants with Partner Fungi and Bacteria
- 18.1** Karl Stetter: Adventures in Microbial Diversity Lead to Products in Industry
- 20.1** Oomycetes: Lethal Parasites That Resemble Fungi
- 20.2** A Ciliate Model for Human Aging
- 21.1** Mapping Bermuda Phytoplankton
- 21.2** Cold-Seep Ecosystems
- 22.1** Wetlands: Disappearing Microbial Ecosystems
- 22.2** Metal Contamination and Bioremediation

- 23.1 Microbes as Vaccine Delivery Systems
- 23.2 Do Defensins Help Determine Species Specificity for Infection?
- 23.3 Cathelicidins
- 24.1 Factors That Influence Immunogenicity
- 24.2 ABO Blood Groups: Antigens, Antibodies, and Karl Landsteiner
- 24.3 Organ Donation and Transplant Rejection
- 24.4 Case Studies in Hypersensitivity
- 25.1 Finding Virulence Genes: Signature-Tagged Mutagenesis
- 25.2 Finding Virulence Genes: In Vivo Expression Technologies
- 25.3 Caught in the Act: *Streptococcus agalactiae* Evolved through Conjugation
- 25.4 Pili Tip Proteins Tighten Their Grip
- 25.5 Normal G-Factor Control of Adenylate Cyclase
- 25.6 Diphtheria Toxin
- 25.7 Identifying New Microbial Toxins
- 25.8 Bacterial Covert Operations: Secreted *Shigella* Effector Proteins Jam Communications between Target Cells and Innate Immunity

- 26.1 Sequenced Genomes of Pathogens
- 26.2 Human Papillomavirus
- 26.3 The Respiratory Tract Pathogen *Bordetella* Binds to Lung Cilia
- 26.4 The Common Cold versus Influenza
- 26.5 Intracellular Biofilm Pods Are Reservoirs of Infection
- 26.6 Human Immunodeficiency Virus: Pathogenesis
- 26.7 Spongiform Encephalopathies
- 26.8 Atherosclerosis and Coronary Artery Disease
- 27.1 Antibiotic Spectrum of Activity
- 27.2 Antibiotic Biosynthesis Pathways
- 27.3 Poking Holes with Nanotubes: A New Antibiotic Therapy
- 27.4 Critical Virulence Factors Found in the 1918 Strain of Influenza Virus
- 28.1 API Reactions and Generating a Seven-Digit Microbe Identification Code
- 28.2 DNA-Based Detection Tests
- 28.3 Microbial Pathogen Detection Gets Wired Up
