Preface

xv

I PRINCIPLES

1

1 Models of Systems

3

- 1.1 Systems, Models, and Modeling 3
- 1.2 Uses of Scientific Models 5
- 1.3 Example: The Leaky Bucket 6
- 1.4 Classifications of Models 9
 - 1.4.1 Forms of Models 9
 - 1.4.2 Mathematical Classification 9
 - 1.4.3 System Concept Classification 10
- 1.5 Constraints on Model Structure 11
- 1.6 Some Terminology 12
- 1.7 Misuses of Models: The Dark Side 12
- 1.8 Exercises 15

2 The Modeling Process

16

- 2.1 Models Are Problems 16
- 2.2 Two Alternative Approaches 17
 - 2.2.1 The Classical View 17
 - 2.2.2 Problems with the Classical View 21
 - 2.2.3 Multiple Working Hypotheses 22
- 2.3 An Example: Population Doubling Time 24
- 2.4 Model Objectives 28
- 2.5 Exercises 30

3 Qualitative Model Formulation

31

- 3.1 How to Eat an Elephant 31
- 3.2 Forrester Diagrams 32
- 3.3 Examples 35
 - 3.3.1 Grass-Deer "Ecosystem" 35
 - 3.3.2 Population Growth with Explicit Birth and Death 36
 - 3.3.3 Net Population Growth 38
 - 3.3.4 Multiple State Variables 39
 - 3.3.5 Multiple Flow Variables and Units 41

3.4	Errors in Forrester Diagrams	43
3.5	Advantages and Disadvantages of Forrester Diagrams	44
3.6	Principles of Qualitative Formulation	45
3.7	Model Simplification	47
3.8	Other Modeling Problems	50
3.8.1	Transport Models	50
3.8.2	Particle Models	52
3.8.3	Finite State Models	53
3.9	Exercises	55
4	Quantitative Model Formulation	57
4.1	From Qualitative to Quantitative	57
4.2	Finite Difference Equations and Differential Equations	58
4.2.1	Finite Difference Equations	58
4.2.2	Differential Equations	59
4.3	Quantitative Representation of Fundamental Processes	63
4.3.1	Constant and Bulk Flow Rates	64
4.3.2	Dynamic Relative Rates	65
4.3.3	Feedback	66
4.3.4	Mass Action	73
4.3.5	Conservation of Mass and Energy	74
4.3.6	Multiple Controlling Factors	80
4.3.7	Discontinuous Functions	85
4.3.8	Time and Driving Variables	86
4.4	Using the Toolbox of Biological Processes	87
4.4.1	Checking Units	87
4.4.2	Conversion to Dimensionless Format	87
4.4.3	Conservation Principle	88
4.4.4	Rules of Thumb	88
4.5	Useful Functions	89
4.6	Examples	95
4.6.1	Flows with Different Units	96
4.6.2	Driving Variable	96
4.6.3	Riding a Bike	96
4.6.4	Brewing Beer	97
4.7	Exercises	99
5	Simulation Paradigms	101
5.1	Computer Simulation	101
5.2	Hierarchical Levels in Languages	104
5.3	Simulation Languages	106
5.3.1	Electronic Analog Computers	106
5.3.2	Aids to Digital Simulation	107
5.4	SCoP	108

5.5	Stella	111
5.6	Spreadsheets	113
5.7	Computer-Aided Mathematics	114
5.8	Summary	117
6	Numerical Techniques	118
6.1	Mistakes Computers Make	118
6.1.1	Representations of Numbers	118
6.1.2	Round-Off, Truncation, and Propagation Errors	120
6.2	Numerical Integration	121
6.2.1	Slope Fields	121
6.2.2	Euler's Method	122
6.2.3	Runge-Kutta Basics	123
6.3	Numerical Instability and Stiff Equations	125
6.4	Integrating ODEs with Variable Time Steps	127
6.5	PDEs and the Method of Lines	129
6.5.1	Discretization	129
6.5.2	Method of Lines and ODEs	130
6.6	Exercises	132
7	Parameter Estimation	133
7.1	The Problem	133
7.2	Simple Linear Regression	135
7.2.1	Static Applications	135
7.2.2	Dynamic Applications	135
7.2.3	Linear Regression on Transformed Equations	136
7.2.4	Problems with Transformations	137
7.3	Nonlinear Equations Linear in the Parameters	138
7.3.1	Multiple Linear Regression	138
7.3.2	Polynomial Regression	139
7.4	Equations with Nonlinear Parameters	140
7.4.1	Gradient Methods	141
7.4.2	Direct Methods	142
7.5	Calibration to Dynamic Data	145
7.5.1	Evolutionary Techniques	147
7.6	Parameter Estimation Cautions	147
7.6.1	All Methods	147
7.6.2	Problems with Iterative Methods	148
7.7	Exercises	149
8	Model Validation	151
8.1	Insight and Illumination	151
8.2	Validation: When Models Go Bad	151
8.2.1	The Logic of Falsifying Complex Simulation Models	153
8.2.2	The Geometry of Validation	154

8.2.3	Variables and Levels for Validation	155
8.2.4	Conditions for Validation	157
8.2.5	Model Discrimination	169
8.2.6	Meta-Models	176
8.3	Précis on Validation	177
8.4	Exercises	178
9	Model Analysis	179
9.1	Analyzing Model Responses	179
9.2	Uncertainty Analysis	179
9.2.1	Parameter Sensitivity	180
9.2.2	Error Analysis	186
9.2.3	Aggregation Analysis	192
9.3	Analysis of Model Behavior	194
9.3.1	Equilibria and Nullclines	194
9.3.2	Stability	197
9.4	Exercises	210
10	Stochastic Models	212
10.1	There's Nothing Like a Random World	212
10.2	Random Numbers	214
10.2.1	Generating Uniform Random Numbers	215
10.2.2	Generating Normal Deviates	217
10.2.3	Inverse Cumulative Methods	217
10.2.4	Methods for Other Distributions	220
10.2.5	Multivariate Distributions	220
10.3	Applications to Differential Equations	221
10.4	Markov Processes	225
10.4.1	Biological Applications of Markov Processes	226
10.4.2	Simulating Markov and Transition Matrix Models	227
10.5	Exercises	228
II	APPLICATIONS	231
11	Photosynthesis and Plant Growth	233
11.1	Introduction	233
11.2	Cellular-Level Photosynthesis	233
11.2.1	Photosynthesis Biochemistry	234
11.2.2	Carbon Assimilation	235
11.3	Leaf-Level Photosynthesis	239
11.3.1	Basics of Plant-Water Relations	239
11.3.2	Stomata Dynamics	241
11.4	Plant Growth	247
11.4.1	Growth of Total Plant Biomass	247

11.4.2	Whole-Plant Model	250
11.4.3	Partitioning Resources to Organs	252
11.5	Summary	256
11.6	Exercises	256
12	Hormonal Control in Mammals	257
12.1	Hormonal Regulation	257
12.2	Glucose and Insulin Regulation	257
12.3	Glucose Model of Intermediate Complexity	260
12.3.1	Basic Equations	261
12.3.2	Glucose Subsystem	262
12.3.3	Glucagon Subsystem	263
12.3.4	Insulin Subsystem	264
12.3.5	Normal Simulations	265
12.3.6	Diabetic Simulations	265
12.3.7	Obesity Simulations	265
12.4	Summary	266
12.5	Exercises	267
13	Populations and Individuals	269
13.1	Populations	269
13.1.1	Populations Without Age Structure	270
13.1.2	Populations with Discrete Age Structure	270
13.1.3	Matrix Approach	272
13.1.4	Individual-Based Population Models	273
13.2	Interactions in Simple Communities	279
13.2.1	Mechanistic Models of Competition	279
13.2.2	Predation in Simple Communities	281
13.2.3	Testing Predation Models	286
13.3	Exercises	290
14	Chemostats	293
14.1	Chemostats and Simple Population Dynamics	293
14.1.1	Monod Model	294
14.1.2	Droop Equation	295
14.1.3	Success of the Models	296
14.2	Competitors in Chemostats	297
14.3	Predators in Chemostats	300
14.4	Exercises	304
15	Spatial Patterns and Processes	306
15.1	Dynamics in Space: New Complications	306
15.2	Pattern and Process	307
15.2.1	Slime Mold Aggregation	307
15.2.2	Ladybugs and Aphids	309

15.2.3 Other Continuous Applications	315
15.3 Patches and Metapopulations	316
15.3.1 Populations of Patches	317
15.3.2 Population Processes Within Patches	318
15.3.3 Spatially Explicit Patches	322
15.4 Exercises	324
16 Scaling Models	325
16.1 Pattern and Scale	325
16.1.1 Scaling as Extrapolation	326
16.1.2 Measurement Scale	326
16.1.3 Approaches to Scaling	328
16.1.4 Statistical Techniques for Scale Identification	329
16.1.5 Scaling Models	331
16.2 Scaling Plant Processes: Stomate to Globe	334
16.3 Summary	339
17 Chaos in Biology	340
17.1 Nonlinear Can Be Weird	340
17.1.1 Attractors	341
17.1.2 Bifurcations	341
17.1.3 Chaos in Finite Difference Equations	343
17.1.4 Chaos in Continuous Models	346
17.1.5 Signatures of Chaos	348
17.2 Patterns in Time Series	352
17.3 Structure in Phase Space	354
17.4 Dimensions of Dynamics	356
17.5 Sensitivity to Initial Conditions	357
17.5.1 Lyapunov Exponents	357
17.5.2 Predictive Ability	358
17.6 Controllability of Chaos	358
17.7 Biological Models Producing Chaos	361
17.7.1 Power Spectra	363
17.7.2 Attractor Structure	364
17.7.3 Prediction of Time Series	366
17.7.4 Lyapunov Exponents	367
17.7.5 Controlling Chaos	368
17.7.6 Experimental Population Studies	370
17.8 Why Is There Chaos in Biology?	373
17.9 Exercises	376
18 Cellular Automata and Recursive Growth	377
18.1 An Analog and Digital World	377
18.2 Finite State Automata	378
18.3 Cellular Automata	379

18.4 Applications in Biology	382
18.4.1 Plant Competition	382
18.4.2 Excitable Tissue	383
18.5 Recursive Growth	392
18.5.1 Definition of L-Systems	392
18.5.2 Plant Shape as an L-System	392
18.5.3 Plant Evolution	394
18.6 Summary	399
18.7 Exercises	400
19 Evolutionary Computation	401
19.1 The Problem of Global Optimization	401
19.2 Optimization as Natural Selection	402
19.3 Kinds of Evolutionary Computation	403
19.3.1 Simulated Annealing	403
19.3.2 Evolutionary Programming	406
19.3.3 Evolution Strategies	407
19.3.4 Genetic Algorithms	408
19.4 Genetic Algorithms and Genetic Programming	408
19.4.1 The Basic Genetic Algorithm	408
19.4.2 Examples: Parameters and Beetles	411
19.5 Genetic Programming (GP)	413
19.5.1 GP: GAs Applied to S-Expressions	414
19.5.2 Simple Symbolic Regression	417
19.5.3 GP Applied to Optimal Foraging	419
19.6 Précis on Evolutionary Computation	421
19.7 Exercises	422
20 Complex Adaptive Systems	424
20.1 What Is Life?	424
20.2 What is ALife?	425
20.3 Goal Directedness: Robotic Crickets	425
20.4 Emergence of Behavior: Evolving Robots	429
20.5 Emergence of Structure: Dueling Blockata	433
20.6 Where Will It All End?	435
References	439
