<i>Preface to the second edition</i>	ix
<i>Acknowledgements to the second edition</i>	xii
<i>Preface to the first edition</i>	xiv
<i>Acknowledgements to the first edition</i>	xvi
<i>Notation</i>	xviii
1 Human thermal environments	1
<i>Introduction</i>	1
<i>Basic parameters</i>	2
<i>The heat balance equation for the human body</i>	16
<i>Example calculation</i>	22
<i>From thermal audit to educated guess: a practical approach</i>	28
2 Human thermal physiology and thermoregulation	31
<i>Introduction</i>	31
<i>The thermophysical properties of the human body</i>	32
<i>Physiological responses</i>	39
<i>Behavioural thermoregulation</i>	44
<i>Body temperature</i>	46
3 Psychological responses	49
<i>Introduction</i>	49
<i>Psychological models</i>	51
<i>Thermal sensation</i>	53
<i>Thermoreception</i>	54
<i>Semantics, psychological models and multidimensional scaling</i>	61

vi Contents

Mood, aggression, depression and other
psychological reactions 63

Discussion 69

4 Dehydration and water requirements 71

Introduction 71

Body water 72

Dehydration measures 73

Bioelectrical Impedance Analysis (BIA) 83

Dehydration limits 84

Practical recommendations for drinking 87

5 Measurement methods and assessment techniques 93

Introduction 93

Measuring kits and composite instruments 109

Measurement of physiological response 112

Measurement of psychological responses 122

The thermal index – an assessment
technique 128

6 Metabolic heat production 131

Introduction 131

Where does the heat come from? 131

Estimation of metabolic heat production 134

The use of tables and databases 140

Empirical models 143

Subjective methods 144

Special populations – children, people with physical
disabilities and people wearing protective clothing
and equipment 148

7 The thermal properties of clothing 156

Introduction 156

A simple clothing model 157

The two-parameter model 165

Determination of the thermal properties
of clothing 179

Clothing specification and the window
of application 195

8 Thermal comfort	196
<i>Introduction</i>	196
<i>Whole-body thermal comfort</i>	197
<i>Thermal models and thermal comfort</i>	215
<i>Do requirements for comfort universally apply?</i>	221
9 Thermal comfort for special populations, special environments and adaptive modelling	229
<i>Introduction</i>	229
<i>People with disabilities</i>	229
<i>Babies, children, the sick and the pregnant</i>	236
<i>Behavioural thermoregulation, thermal comfort and the adaptive model</i>	237
10 Heat stress	258
<i>Introduction</i>	258
<i>Physiological responses to heat</i>	259
<i>Heat stress indices</i>	261
<i>Acclimatization</i>	287
11 Cold stress	293
<i>Introduction</i>	293
<i>Physiological responses to cold</i>	294
<i>Psychological response to cold</i>	297
<i>Cold stress indices</i>	300
<i>Case study of cold work in a hospital 'plating area'</i>	321
12 Interference with activities, performance and productivity	326
<i>Introduction</i>	326
<i>Early studies: Factory output and accidents</i>	328
<i>Performance models and indices</i>	339
<i>A rational performance model</i>	344
13 Human skin contact with hot, moderate and cold surfaces	350
<i>Introduction</i>	350
<i>Skin contact with a hot surface - analysis of the event</i>	351

Mathematical models of heat transfer	363
Discussion	376
Surfaces of moderate temperature	382
Cold surfaces	384
14 International Standards	388
Introduction	388
ISO Standards	388
Standards under development	415
Standards in the USA	421
Standards in the UK	427
European Standards (CEN)	431
Example of the application of International (ISO) Standards for the assessment of a hot environment	432
Example of the application of International (ISO) Standards for the assessment of moderate environments	434
Example of the application of International (ISO) Standards for the assessment of cold environments	435
15 Thermal models and computer aided design	438
Introduction	438
Thermal models	439
Do models work?	466
Appendix Fundamentals of heat transfer	478
References	483
Index	518
