Contents

CHAPTER 1 Introduction to Ecology 1

1.1 Defining Ecology 1

1.2 The Scope of Ecology 4

Levels of Ecological Study 5

Organismal Ecology 6

Population Ecology 7

Community Ecology 9

Ecosystem Ecology 9

The Ecologist 10

1.3 Ecologist Use the Scientific Method to Investigate Nature 11

The Process of Science 11

The Ecologist Investigates Both Process and Patterns 16

Making Predictions Using a Model System 16

Solving Problems Using Ecology 18

1.4 Ecosystem Types 20

Major Ecosystem Types 21

1.5 Energy Flow in an Ecosystem 24

Food Chains and Food Webs 25

How Organisms Acquire Energy in a Food Web 27

Productivity Within Trophic Levels 28

CHAPTER 2 Biogeography and Climate 33

2.1 Biogeography 33

Ecosystems and Biomes Describe a Biogeographic Range 35

The Fossil Record 35

Biogeography and the Evolutionary Map 35

Distribution Patterns of Plants and Animals 37

Solar Radiation and Nutrient Uptake for Primary Production 39

Temperature 44

Water 45

2.2 Global Climate and Weather Patterns 46

Climate and Weather 47

Solar Radiation Determines Earth's Surface Temperature 47

Biomes Experience Seasonal Variation in Temperature 49

The Effect of Surface Temperature on Precipitation and Wind Patterns 53

Ocean Currents are Determined by Wind Patterns 55
Precipitation is Influenced by Surface Temperatures 56
Topography Affects Local Climate Patterns 57

CHAPTER 3 Climate Change 61
3.1 Evidence for Climate Change 61
Evidence for Global Climate Change 63
A 2000-Year Record of Climate Change Events 66
Current and Past Drivers of Global Climate Change 66
3.2 Tracking Climate Change 70
Documented Results of Climate Change: Past and Present 72
Geological Climate Change 73
Present Climate Change 74
A Review of How Changing Climate Affects Ecosystems 75
3.3 Living in a Bubble 75

CHAPTER 4 The Terrestrial Environment 81
4.1 Physical Constraints for Land Dwellers 81
Bats Under Threat 86
4.2 Soil Composition, Formation, and Physical Properties 87
Soil Composition 88
The Process of Soil Formation 90
Physical Properties of the Soil 92
Soil Management 93
The Dust Bowl 95
4.3 Light Availability and Distribution 98
4.4 Terrestrial Biomes Are Determined by Abiotic Factors 99
Tropical Wet Forest (0°–13° Lat) 101
Savannas—Tropical Grasslands (10°–20° Lat) 102
Deserts (15–30° Lat, mostly) 103
Chaparral (30°–50° Lat) 105
Temperate Grasslands (23°–55° Lat) 107
Temperate Deciduous Forests (23°–66° Lat) 108
Boreal Forests (50°–60° Lat) 108
Arctic Tundra (60°–70° Lat) 111
4.5 Desertification 112
Soil Restoration Is Part of the Global Response on Climate Action 113
How the Sahara Desert Is Turning Into a Farmland Oasis 114

CHAPTER 5 Aquatic Environments **117**
5.1 Physical Properties and Constraints in Aquatic Species 117
Abiotic Factors 117
The Water Cycle 118
The Life-Giving Properties of Water 120
5.2 Marine Biomes 130
Unique Water Properties According to Its Depth 131
The Neritic Zones (Coastal) 131
Coral Reefs 134
The Pelagic Realm (Deep Ocean) 134
5.3 Water Movement and Transition Zones 138
The Littoral Zone (Intertidal) 138
Estuaries 140
5.4 Freshwater Biomes 141
5.5 Global Decline of Coral Reefs 145

CHAPTER 6 Natural Selection and Adaptations **149**
6.1 Darwin and Natural Selection 149
Before Darwin 150
The Pattern and Process of Natural Selection 151
Descent With Modification 154
6.2 Processes and Patterns of Evolution 156
Adaptations Increase Fitness 158
Divergence and Convergence of Species Evolution 158
Evidence for Evolution 159
Acclimatization 168
6.3 Organization of Life on Earth 170
Phylogenetic Trees 170
The Levels of Classification 172
6.4 Speciation 174
Species and the Ability to Reproduce 175
New Species 176
Allopatric Speciation 178
Adaptive Radiation 179
Sympatric Speciation 181
Reproductive Isolation 181
Adaptations Reflect Trade-Offs and Constraints 184

CHAPTER 7 Adaptation to the Environment **189**
7.1 Plant Adaptations 189
Review on Nutrition Mode 190

Photosynthesis 191
The Two Phases of Photosynthesis in Plants 194
What Is Light Energy? 194
Absorption of Light 197
Light-Dependent Reactions 198
Light-Independent Reactions 200
Water Movement in Plants 203
Nutrient Acquisition in Plants 204
Nitrogen Fixation: Interactions Between Plants and Bacteria 204
Plants Adapt in Environments That Are Deficient in Resources 206
Carbon Uptake in Aquatic Plants 209
Atmospheric Temperature Influences Plant Adaptations 209
Acclimation vs Adaptation in Plants 210
7.2 Animal Adaptations 211
Size Is a Fundamental Constraint 212
Strategies Animals Use to Acquire Energy and Nutrients 212
Conformer and Regulator Modes of Response to the Environment 214
Internal Conditions Are Maintained by Homeostasis 215
The Importance of Water Balance 216
Thermoregulation in Animals 216
Camouflage or Biological Mimicry 220
Habitats Reflect Trade-Offs 220

CHAPTER 8 Ecosystem Energetics 225
8.1 Energy Is Governed by Physical Laws of Nature 225
First Law of Thermodynamics—Energy Is a Constant 227
Second Law of Thermodynamics—Random or Not? 229
8.2 Energy Is Stored Temporarily Within Organisms as ATP 231
Energy Transfers and Electrons 232
Energy and Metabolism 233
Net Energy Intake Is Modified in the Hummingbird 236
8.3 Productivity 237
Productivity in Trophic Levels 238
NPP Is Determined by Light and Nutrient Availability 242
Nutrient Acquisition and NPP 245
8.4 Food Webs and Modeling Ecosystems 246
Consequences of Food Webs: Biomagnification 248

CHAPTER 9 Nutrient and Biogeochemical Cycling **253**
9.1 The Biogeochemical Cycle 253
9.2 Terrestrial and Aquatic Decomposition 255
9.3 The Major Nutrient Cycles 259
The Hydrologic Cycle 260
The Carbon Cycle 263
The Nitrogen Cycle 265
The Phosphorus Cycle 267
Dead Zone: Chesapeake Bay Area 268
The Sulfur Cycle 270
9.4 Carbon Dating 272

CHAPTER 10 Population Dynamics **277**
10.1 Properties of Populations 277
Species Abundance and Distribution 277
Geographic Range 281
Sampling Methods 285
Structural Characteristics of Populations 290
Population Migration Patterns 291
10.2 Population Growth 296
Geometric Population Modeling in Closed Populations 296
Exponential Population Modeling in Open Populations 298
Carrying Capacity and the Logistic Population Model 300
Life Tables 302
Survivorship Curves 304
Gains and Losses in Species Populations 306
The Primary Factors That Threaten the Bumblebee 308

CHAPTER 11 Life Histories **311**
11.1 Life History Continuum 311
Life History 311
Phenotypic Variation Is a Special Form of Acclimation 315
Plant Life History Characteristics 318
11.2 Reproductive Modes and Sexual Selection 319
Asexual Reproduction 320
Parthenogenesis 321
Sexual Reproduction 323
Reproductive Fitness 325
Mode of Parity 330
Sexual Selection 331

Sexual Dimorphism 332
Plant Mating Systems 335

CHAPTER 12 Species Interactions 339
12.1 Species Interactions Alter Population Dynamics 339
Symbiosis 340
12.2 Coevolution of Species 347
Camouflage and Biological Mimicry Developed as Survival Strategies 347
Predator–Prey Dynamics 349
Mutualism by Design 352
Coevolution in Character Displacement 354
12.3 Interactions Influence Species' Niche 357
Generalist vs Specialist 357
Biodiversity Hot Spots 359
Loss of Symbiosis 361
The Ecological Niche 362
12.4 Competition and Predation 365
The Competitive Exclusion Principle 365
Modeling Interspecies Dynamics 372
Competition Field Studies 372

CHAPTER 13 Community Structure and Dynamics 377
13.1 Community Structure 377
The Biotic Community 377
Species Composition 379
Extrinsic Factors Create Environmental Gradients 381
Diffuse Species Interactions 385
Keystone Species 388
13.2 Community Dynamics 392
Community Hierarchy 392
Ecological Succession 396
Invasive Species Threaten Community Dynamics 402
The Bluegill Invasion 403
The Asian Carp Story 403
The Humongous Fungus 407
13.3 Exploring Ethnobotany 408
The Gaia Hypothesis 409

CHAPTER 14 Tracking Biodiversity 415
14.1 Ecosystem Loss 415
Ecosystem Services 416
Conservation and Environmental Sustainability 417
Lake Victoria Cichlid Diversity 417
Prairies: An Ecosystem in Danger 421
Ecosystem in Recovery: Barrier Reef of the Bay Islands 421
Sea Urchins: Recovery of a Keystone Species 423
14.2 Tracking Biodiversity 424
Measuring Diversity 424
Species Distribution Patterns 429
Cataloging Biodiversity 431

CHAPTER 15 Drivers of Biodiversity Loss 437
15.1 Biodiversity Loss in the Anthropocene 437
The Anthropocene 437
Drivers of Biodiversity Loss 439
Nutrient Loading and Pollution 441
Overexploitation 445
Habitat Loss 446
15.2 Preserving Biodiversity 449
Legislative Action to Preserve Wildlife 450
Legislative Action on Climate Change 451
Legislative Action to Preserve Marine Life 452
Personhood Rights for Natural Resources 453

Index 457
