Contents

Preface v
Introduction vii

CHAPTER 1 **Basic Principles and How They Constrain the Path to Life** 1

CHAPTER 2 **Abiotic Chemistry, Physicochemical Selection, and the First Steps Toward Life** 17

CHAPTER 3 **Membranes and the Critical Role of Containment** 45

CHAPTER 4 **"Defeating" Chemical Equilibrium and the Rise of Chemical Complexity** 65

CHAPTER 5 **Catalysis and Molecular Selection: The RNA World Hypothesis** 77

CHAPTER 6 **From the RNA World to the DNA Genetic Code** 113

CHAPTER 7 **Controlling Chemistry: Metabolism and Systemic Time** 145

CHAPTER 8 **Genome Concatenation and Controlled Division: The Final Steps** 181

CHAPTER 9 **Natural Selection and Major Evolutionary Transitions** 213
