1. Refining experimental design for crop pollination research: An interdisciplinary framework **1**

L.J. Evans, B.T. Cutting, S.J. Trueman, B.G. Howlett, J. Cook, H.M. Wallace, R. Rader, and M.A. Broussard

1. Introduction 2
2. A conceptual framework for designing and interpreting crop pollination studies 4
3. Considering pollinators and plant reproductive biology 5
4. Types of data relevant to crop pollination 9
   - **4.1** Pollinator dependence and pollen deficit 9
   - **4.2** Pollen compatibility, availability, and viability 11
   - **4.3** Pollen requirement 12
   - **4.4** Flower quality, receptivity, and effective pollination period 14
   - **4.5** Flower-visitor identity and abundance 15
   - **4.6** Pollen transfer 18
   - **4.7** Proxies for pollen transfer 19
   - **4.8** Movement and pollen carryover of pollinators 20
   - **4.9** Pollen flow in the landscape 21
   - **4.10** Environmental factors 22
   - **4.11** Landscape characteristics 24
5. Conclusion 27

2. Bee diversity and crop pollination in low-diversity regions: Balancing global insights and local contexts **39**

B.G. Howlett, B.T. Cutting, E.J. Dowle, M. Gee, S.F.J. Read, M.K. Walker, and L.J. Evans

1. Introduction: Bee diversity in productive ecosystems 40
2. Benefits of bee diversity for crop pollination 41
3. Setting bee diversity goals for crop pollination 43

4. Challenges and opportunities in fostering bee diversity in low diversity regions: Insights from New Zealand 44
4.1 Crop pollination and bee diversity in New Zealand 46
4.2 The interaction of New Zealand native bees with exotic and native plants 47
4.3 Diversity and prevalence of bee species across commercial crops 48
4.4 Activity patterns of bees and alignment with crop flowering periods 50
4.5 Pollen transfer and movement patterns of bees in crops 55
4.6 A systematic literature review of New Zealand bees as crop visitors and pollinators 65
5. Summary: Fostering bee diversity in New Zealand 66
5.1 Pollination service redundancy 68
5.2 Pollination service complementarity 69
5.3 Native bee management opportunities and future research 70
6. Global relevance 72
7. Methodology 73
7.1 Bee species richness by country 73
7.2 Observational surveys: Bee diversity and prevalence 73
7.3 Pollen transfer to crop stigmas by bees 74
7.4 Systematic literature review: Crop flower visitors and pollinators 75

3. Evaluating the net impacts of a naturalised non-native species and attempts to control its spread in the UK: Addressing the oyster in the room **87**

Alex Shakspeare, Alana Wilson, Tom C. Cameron, and Michael Steinke

1. Introduction 88
2. Naturalisation and dispersal of *M. gigas* from aquaculture sites 91
3. Impacts and potential mitigations 93
3.1 Interactions with native Flat oysters (*O. edulis*) 94
3.2 Interactions with other habitat types and protected areas 96
3.3 Effects on ecosystems and their function 99
3.4 Effects on birds 100
3.5 Effects on recreational activities 102

3.6 Effects on socioeconomics 102
3.7 Effectiveness of mitigation strategies to minimise the spread of *M. gigas* 107
4. Impacts of and adaptation to climate and coastal change 111
4.1 Living breakwaters 111
5. Discussion and conclusion 112

4. Regional innovation ecosystems to support sustainable forest landscape futures **127**

Gordon M. Hickey, Elsa T. Berthet, and Rodney J. Keenan

1. Introduction 128
2. Conceptual framework 129
3. Case study: Forested landscapes in Gippsland, Victoria, Australia 132
4. Methods 134
5. Results 135
6. Discussion 142
Acknowledgements 144
Appendix 1. Survey questions 144
References 146

5. Spatial regimes provide ample early warning of tipping points **151**

Craig R. Allen, Ahjond Garmestani, David G. Angeler, Lance Gunderson, Caleb P. Roberts, S.M. Sundstrom, Daniel R. Uden, and Jianguo Liu

1. Introduction 152
2. Spatial regimes 153
3. Scale 155
4. Telecoupled spatial regimes 157
5. Leading indicators of regime change 159
6. Examples of telecoupling and cascading impacts resulting from regime movement 161

6.1 Corn and soybean production 161
6.2 Tree regime spread into the Great Plains 162
7. Implications for social-ecological resilience 163
8. Conclusions 163
