

Contents

Preface ix

1. Introduction to Biological Membranes

- A. What is a Biological Membrane? 1
- B. General Membrane Functions 3
- C. Eukaryote Cell Structure 4
- D. Size of Domains 8
- E. Basic Composition of Membranes 10
- Summary 11
- References 11

2. Membrane History

- A. Oil On Water: Interface Studies 13
- B. The Lipid Bilayer Membrane 20
- Summary 27
- References 28

3. Water and the Hydrophobic Effect

- A. Water – Strength in Numbers 29
- B. Structure of Water 31
- C. Properties of Water – No Ordinary Joe 32
- D. Surface Tension 34
- E. The Hydrophobic Effect 37
- Summary 40
- References 41

4. Membrane Lipids: Fatty Acids

- A. What are Lipids? 43
- B. Why are there so Many Different Lipids? 44
- C. Lipid Classification Systems 45
- D. Fatty Acids 46
- Summary 55
- References 55

5. Membrane Polar Lipids

- A. Bonds Connecting to Acyl Chains 57
- B. Phospholipids 60
- C. Sphingolipids 71
- D. Sterols 74
- E. Membrane Lipid Distribution 76
- F. Plant Lipids 76
- G. Membrane Lipids Found in Low Abundance 78
- Summary 81
- References 82

6. Membrane Proteins

- A. Introduction 85
- B. The Amino Acids 86
- C. How Many Membrane Protein Types are there? 91
- Summary 103
- References 104

7. Membrane Sugars

- A. Introduction 107
- B. Glycolipids 111
- C. Glycoproteins 112
- D. GPI-Anchored Proteins 114
- Summary 115
- References 115

8. From Lipid Bilayers to Lipid Rafts

- A. Development of Membrane Models 117
- B. The Danielli-Davson Pauci-Molecular Model 118
- C. The Robertson Unit Membrane Model 119
- D. Benson and Green's Lipoprotein Subunit Models 120
- E. The Singer-Nicolson Fluid Mosaic Model 122

- F. Simons' Lipid Raft Model 125
- Summary 127
- References 128

9. Basic Membrane Properties of the Fluid Mosaic Model

- A. Size and Time Domains 132
- B. Membrane Thickness 134
- C. Membrane Asymmetry 137
- D. Lateral Diffusion 144
- E. Lipid Trans-Membrane Diffusion (Flip-Flop) 151
- F. Lipid Melting Behavior 157
- G. Membrane 'Fluidity' 170
- Summary 172
- References 172

10. Lipid Membrane Properties

- A. Complex Lipid Interactions 176
- B. Non-Lamellar Phases 182
- C. Lipid Phase Diagrams 190
- D. Lipid-Protein Interactions 194
- E. Lipid Interdigitation 206
- Summary 210
- References 211

11. Long-Range Membrane Properties

- A. Membrane Bilayer Lipid Packing 215
- B. Membrane Protein Distribution 222
- C. Imaging of Membrane Domains 223
- D. Homeoviscous Adaptation 232
- Summary 235
- References 235

12. Membrane Isolation Methods

- A. Introduction 239
- B. Breaking Open the Cell: Homogenization 241
- C. Membrane Fractionation: Centrifugation 248

- D. Membrane Fractionation: Non-Centrifugation Methods 253
- E. Membrane Markers 260
- Summary 261
- References 262

13. Membrane Reconstitution

- A. Detergents 266
- B. Membrane Protein Isolation 271
- C. Membrane Lipid Isolation 275
- D. Model Lipid Bilayer Membranes — Liposomes 282
- E. Membrane Reconstitution 292
- F. Lipid Rafts 295
- Summary 300
- References 300

14. Membrane Transport

- A. Introduction 305
- B. Simple Passive Diffusion 309
- C. Facilitated Diffusion 311
- D. Active Transport 317
- E. Ionophores 324
- F. Gap Junctions 328
- G. Other Ways to Cross the Membrane 329
- Summary 334
- References 335

15. Membranes and Human Health

- A. Liposomes as Drug-Delivery Agents 339
- B. Effect of Dietary Lipids on Membrane Structure/Function 348
- Summary 352
- References 353

Chronology of Membrane Studies 357

Index 361
