1. Introduction	1
Helen Bridle	
References	5
Section 1 Overview and Background	7
2. Overview of Waterborne Pathogens	9
Helen Bridle	
2.1. Viruses	15
2.2. Bacteria	21
2.3. Protozoa	26
2.4. Helminths	35
2.5. Summary	37
Acknowledgment	37
References	38
3. Existing Methods of Waterborne Pathogen Detection	41
Helen Bridle, Kimberly Gilbride, James Green	
3.1. World health organisation guidelines	41
3.2. Types of monitoring	43
3.3. Fecal indicator monitoring	45
3.4. Direct detection of pathogens	55
3.5. Summary	62
References	63
Section 2 Sample Processing	65
4. Sample Processing	67
Helen Bridle, Karin Jacobsson, Anna C. Schultz	
4.1. Background	68
4.2. Sampling	71
4.3. Concentration techniques	74

4.4. Secondary concentration techniques	91
4.5. Nuclei acid extraction for molecular detection	99
4.6. Analytical controls	100
4.7. Summary	106
References	109
Section 3 Detection	115
5. Optical Detection Technologies for Waterborne Pathogens	119
Helen Bridle	
5.1. Techniques using labeling	120
5.2. Spectroscopy	131
5.3. Summary	140
References	142
6. Electrochemical Detection	147
Timothée Houssin, Vincent Senez	
6.1. Introduction	147
6.2. Potentiometry	150
6.3. Voltammetry	153
6.4. Coulometry	157
6.5. Impedance spectroscopy	159
6.6. Dielectrophoresis	161
6.7. Scaling effect	164
6.8. Miniaturized detection of waterborne pathogens	168
6.9. Summary and future outlook	177
References	180
7. Biosensors for the Detection of Waterborne Pathogens	189
Helen Bridle, Marc Desmulliez	
7.1. Performance characteristics	192
7.2. Recognition elements	194
7.3. Transduction methods	201
7.4. Biosensors for waterborne viruses	209
7.5. Biosensors for waterborne bacteria	211
7.6. Biosensors for waterborne protozoa	218
7.7. Biosensors for the detection of waterborne parasites	222
7.8. Summary and future outlook	223
References	225

8. Molecular Methods for the Detection of Waterborne Pathogens	231
Kimberley Gilbride	
8.1. Why molecular methods?	232
8.2. Molecular methods	234
8.3. Current state of pathogen detection in water sources	259
8.4. Fecal source tracking	274
8.5. Summary and future outlook	276
References	279
9. Nanotechnology for Detection of Waterborne Pathogens	291
Helen Bridle	
9.1. Introduction	291
9.2. Background	291
9.3. Nanotechnology in sample processing	296
9.4. Nanotechnology in pathogen detection	299
9.5. Summary	313
References	315
10. Miniaturized Detection Systems	319
Helen Bridle	
10.1. Microfluidics	319
10.2. Applications	328
10.3. Summary	342
References	344
Section 4 Applications and Evaluation	349
11. Applications of Emerging Technologies in the Drinking Water Sector	351
Lauren Rowe, Graham Sprigg	
11.1. Current position of the UK water industry	351
11.2. Application of WSPs and WSF in the rest of the world	356
11.3. The legislative framework	360
11.4. Pathogens of major concern to the market	362
11.5. Public health policy implications for detection and treatment	366
11.6. Detection and treatment from a market perspective	367
11.7. Market adoption of emerging technologies	370
11.8. Conclusions	374
References	375

12. Conclusions	379
Helen Bridle	
12.1. Summary	379
12.2. The future of waterborne pathogen monitoring	385
Index	389
