List of Contributors xiii

Preface to the First Edition xvii

Preface to the Second Edition xix

List of Reviewers xxi

1. Coastal Wetlands: A Synthesis

CHARLES S. HOPKINSON, ERIC WOLANSKI,
MARK M. BRINSON, DONALD R. CAHOON, AND
GERARDO M.E. PERILLO

1. Introduction 1
2. A Synthesis of Coastal Wetlands Science 5
3. Human Health and Coastal Wetland Socioeconomics 45
4. Coastal Wetlands Are Essential for Our Quality of Life 50
5. Blue Carbon and Human Well-Being 50
- Acknowledgments 64
- References 64

PART I

COASTAL WETLANDS AS ECOSYSTEMS

2. The Morphology and Development of Coastal Wetlands in the Tropics

COLIN D. WOODROFFE

1. Introduction 79
2. Mangrove and Associated Wetlands 80
3. Environmental Settings 82
4. Sedimentation and the Development of Wetlands 84
5. Sea Level Controls on Wetland Development 86
6. Sea Level Change and the Diversification of West Indian Mangroves 89

7. Sea Level Change and Mangrove Habitat Evolution in the Pacific 90
8. Impact of Future Climate and Sea Level Change 94
9. Summary and Concluding Remarks 97
- References 98

3. Temperate Coastal Wetlands: Morphology, Sediment Processes, and Plant Communities

PAULA PRATOLONGO, NICOLETTA LEONARDI,
JASON R. KIRBY, AND ANDREW PLATER

1. Introduction 105
2. Factors Controlling Salt Marsh Development 108
3. Spatial and Temporal Patterns of Variation 115
4. Geographic Variation 119
5. Human Impacts and Climate Change 137
6. Summary 141
- References 142

4. Northern Polar Coastal Wetlands: Development, Structure, and Land Use

J. PETER MARTINI, ROBERT L. JEFFERIES,
R. GUY MORRISON, KENNETH F. ABRAHAM,
AND LIUDMILA A. SERGIENKO

1. Introduction 153
2. Geology/Geomorphology 154
3. Oceanography 157
4. Climate 158
5. Structure of Arctic Coastal Wetlands 159
6. Vegetation of Northern Polar Coastal Wetlands 164
7. Fauna of Northern Polar Coastal Wetlands 168
8. Environmental Hazards 177
9. Conclusions and Research Priorities 178
- References 179
- Further Reading 185

PART II

PHYSICAL PROCESSES

5. Salt-Marsh Ecogeomorphological Dynamics and Hydrodynamic Circulation

ANDREA D'ALPAOS, STEFANO LANZONI,
ANDREA RINALDO, AND MARCO MARANI

1. Introduction 189
2. Intertidal Ecogeomorphological Evolution 195
3. Results 204
4. Discussion 211
5. Conclusions 213
 - Acknowledgments 214
 - References 214

6. Geomorphology of Tidal Courses and Depressions

GERARDO M.E. PERILLO

1. Introduction 221
2. Classifications 224
3. Tidal Courses 228
4. Tidal Depressions 246
5. Summary 255
 - Acknowledgments 256
 - References 256

7. Methods to Estimate Heat Balance in Coastal Wetlands

MARIA CINTIA PICCOLO

1. The Heat Balance Equation 263
2. Mid Latitudes 268
3. Low Latitudes 274
4. High Latitudes 279
5. Summary 282
 - References 283
 - Further Reading 288

8. Hydrodynamics and Modeling of Water Flow in Coastal Wetlands

IRIS MÖLLER AND ELIZABETH CHRISTIE

1. Introduction—Importance of Understanding Hydrodynamics and Water Flows in Coastal Wetlands 289
2. Types of Wetland-Flow Interactions 291
3. Large-Scale Flows 294
4. Small-Scale Flows 301

5. Modeling Flow Over Wetlands 307
6. Wave-Induced Flows and Interactions With Wetland Surfaces 311
7. Modeling Waves Over Wetlands 312
8. Tsunami Waves 315
9. Scaling Challenges 317
 - Acknowledgments 319
 - References 319

9. Mathematical Modeling of Tidal Flow Over Saltmarshes and Tidal Flats With Applications to the Venice Lagoon

L. D'ALPAOS, L. CARNIELLO, AND A. DEFINA

1. Introduction 325
2. Wetting and Drying and the Dynamics of Very Shallow Flows 327
3. Wind and Wind Waves 333
4. Saltmarsh Vegetation 340
5. Saltmarshes and Tidal Flats Morphodynamics 342
6. Conclusions 348
 - Acknowledgments 349
 - References 349

PART III

TIDAL FLATS

10. Geomorphology and Sedimentology of Tidal Flats

SHU GAO

1. Introduction 359
2. Basic Conditions for the Formation of Tidal Flats 361
3. Zonation in Sedimentation and Flat Surface Morphology 362
4. Factors and Processes 369
5. Summary 376
 - Acknowledgments 377
 - References 377

11. Intertidal Flats: Form and Function

DAVID M. PATERSON, IRENE FORTUNE,
REBECCA J. ASPDEN, AND KEVIN S. BLACK

1. Introduction 383
2. Engineering the Intertidal 386
3. Biodiversity Impacts 394

4. System Monitoring 396
5. Future Shock: Current Challenges 399
 - Acknowledgments 401
 - References 401
12. Biogeochemical Dynamics of Coastal Tidal Flats
 - C.A. SCHUTTE, S. AHMERKAMP, C.S. WU, M. SEIDEL, DIRK DE BEER, P.L.M. COOK, AND S.B. JOYE
 - 1. Introduction 407
 - 2. Transport Processes on Intertidal Flats 409
 - 3. Microbial Processes 416
 - 4. Organic Matter Sources and Transformations 417
 - 5. Nitrogen Cycle 419
 - 6. Phosphorus Cycle 428
 - 7. Silicon Cycle 430
 - 8. Concluding Remarks 431
 - Acknowledgments 432
 - References 432

PART IV

MARSHES AND SEAGRASSES

13. Productivity and Biogeochemical Cycling in Seagrass Ecosystems
 - MARIANNE HOLMER
 - 1. Introduction 443
 - 2. Sediment Biogeochemistry—Modified by Seagrasses 451
 - 3. Multiple Stressors and Biogeochemical Conditions in Seagrass Meadows 464
 - 4. Human Pressures and Effects on Biogeochemistry 465
 - 5. Future Perspectives and Conclusions 467
 - Acknowledgments 468
 - References 468
14. Tidal Salt Marshes: Sedimentology and Geomorphology
 - JON FRENCH
 - 1. Introduction 479
 - 2. Contexts for Tidal Salt Marsh Formation 481
 - 3. Sedimentology 487

4. Tidal Salt Marsh Landform Development 494
5. Salt Marsh Morphodynamics and Resilience to Sea Level Rise 504
 - Acknowledgments 508
 - References 508
15. Ecosystem Structure of Tidal Saline Marshes
 - JENNEKE M. VISSER, STEPHEN MIDWAY, DONALD M. BALTZ, AND CHARLES E. SASSER
 - 1. Introduction 519
 - 2. Saline Marsh Communities 520
 - 3. Interactions Among Communities 525
 - References 532
16. Salt Marsh Biogeochemistry—An Overview
 - CRAIG TOBIAS AND SCOTT C. NEUBAUER
 - 1. Introduction 539
 - 2. Carbon 540
 - 3. Nitrogen 551
 - 4. Iron and Sulfur 562
 - 5. Phosphorus 569
 - 6. Marshes in Transition 575
 - 7. Directions for Future Work 576
 - List of Abbreviations 577
 - References 578
17. The Role of Freshwater Flows on Salt Marsh Growth and Development
 - LAURENCE A. BOORMAN
 - 1. Introduction 597
 - 2. Freshwater Routes in Salt Marshes 598
 - 3. Associated Processes 604
 - 4. Hydrological Impacts in Salt Marshes 611
 - 5. Techniques for the Study of Marsh Hydrology 611
 - 6. Implications of Freshwater Flows for Salt Marsh Management 612
 - 7. Implications of Freshwater Flows for Salt Marsh Creation 613
 - 8. The Ecohydrological Approach in Salt Marsh Studies 615
 - 9. The Way Ahead—Problems and Challenges 615
 - References 616

18. Tidal Freshwater Wetlands

DENNIS F. WHIGHAM, ANDREW H. BALDWIN, AND
AAT BARENDREGT

1. Introduction 619
2. Hydrogeomorphic Setting 620
3. Biodiversity 624
4. Primary Production and Nutrient Cycling 631
5. Threats and Future Prospectus 633
- References 636
- Further Reading 640

19. Biogeochemistry of Tidal Freshwater Wetlands

J. PATRICK MEGONIGAL AND SCOTT C. NEUBAUER

1. Introduction 641
2. Carbon Biogeochemistry 642
3. Organic Carbon Preservation and Metabolism 650
4. Nitrogen Biogeochemistry 657
5. Phosphorus Biogeochemistry 664
6. Silicon Biogeochemistry 666
7. Responses and Contributions to Global Change 667
8. Concluding Comments 671
- List of Abbreviations 673
- References 673

Part V

MANGROVES

20. Biogeomorphology of Mangroves

JOANNA C. ELLISON

1. Introduction 687
2. Biogeomorphology 689
3. Geomorphic Settings 692
4. Mangrove Biogeomorphic Response to Sea Level Change 696
5. Opportunistic and Deterministic Biogeomorphology 705

6. Long-Term Mangrove Biogeomorphic Influences 707
7. Conclusion 709
- References 710

21. Mangrove Biogeochemistry at Local to Global Scales Using Ecogeomorphic Approaches

ROBERT R. TWILLEY, VICTOR H. RIVERA-MONROY,
ANDRE S. ROVAL, EDWARD CASTANEDA-MOYA, AND
STEPHEN DAVIS

1. Introduction 717
2. Ecogeomorphology of Mangroves 720
3. Geochemical Model 727
4. Net Ecosystem Nutrient Exchange 732
5. Carbon Exchange 735
6. Nitrogen and Phosphorus Exchange 743
7. Global Carbon Estimates 754
8. Disturbance Model 766
- Acknowledgments 769
- References 769
- Further Reading 785

Part VI

COASTAL WETLAND RESTORATION AND MANAGEMENT

22. Tidal Marsh Creation

STEPHEN W. BROOME, CHRISTOPHER B. CRAFT, AND
MICHAEL R. BURCHELL

1. Introduction 789
2. Principles and Techniques of Tidal Marsh Creation 791
3. Evaluating Functional Equivalence of Created Tidal Marshes 798
4. Maximizing Ecosystem Services of Created Marshes 809
5. Summary 811
- References 812

23. Salt Marsh Restoration

PAUL ADAM

1. Introduction 817
2. Setting Objectives 820
3. Planning for the Future 827
4. Addressing Causes and Not Symptoms 835
5. Managing Disturbance 836
6. Conflicting Priorities 849
7. Discussion 850
8. Conclusions 851
- References 852
- Further Reading 861

24. Methods and Criteria for Successful Mangrove Forest Rehabilitation

ROY R. LEWIS III, BENJAMIN M. BROWN, AND
LAURA L. FLYNN

1. Introduction 863
2. General Site Selection for Rehabilitation 865
3. Specific Site Selection for Rehabilitation 866
4. Establishing Success Criteria 876
5. Monitoring and Reporting Success 877
6. Functionality of Rehabilitated Mangrove Forests 879
7. Future Studies 881
8. Summary 881
- References 883
- Further Reading 886

25. Evaluating Restored Tidal Freshwater Wetlands

ANDREW H. BALDWIN, RICHARD S. HAMMERSCHLAG,
AND DONALD R. CAHOON

1. Introduction 889
2. Motivation and Construction Methods for Restoration 890
3. Evaluation Criteria for Restored Tidal Freshwater Wetlands 892
4. Restored Tidal Freshwater Wetlands of the Anacostia River, Washington, DC 901
5. Conclusions and Implications 905
- References 907

Part VII

COASTAL WETLAND
SUSTAINABILITY26. The Shifting Saltmarsh-Mangrove
Ecotone in Australasia and the AmericasNEIL SAINTILAN, KERRYLEE ROGERS, AND
KAREN L. MCKEE

1. Introduction 915
2. Distribution/Geomorphic Settings—Where Do Mangrove and Saltmarsh Coexist? 916
3. Long-Term Dynamics 922
4. Recent Interactions 925
5. Stressors Controlling Delimitation of Mangrove 928
6. Conclusions 935
- References 936

27. The Value of Coastal Wetland
Ecosystem Services

EDWARD B. BARBIER

1. Introduction 947
2. The Challenge of Valuing Coastal Wetlands 948
3. Valuation Examples 951
4. Spatial Variability and the Value of Coastal Wetlands 953
5. Valuing Coastal Wetlands Within a Seascape 956
6. Conclusions 957
- References 959

28. Conservation of Blue Carbon
Ecosystems for Climate Change Mitigation
and AdaptationOSCAR SERRANO, JEFFREY J. KELLEWAY,
CATHERINE LOVELOCK, AND
PAUL S. LAVERY

1. What Is Blue Carbon? 965
2. Ecology of Blue Carbon Ecosystems 968

3. Carbon Cycling in Blue Carbon Ecosystems 971
4. Factors Influencing Carbon Storage in Blue Carbon Ecosystems 972
5. Role of Blue Carbon Ecosystems for Climate Change Adaptation 974
6. Disturbance of Blue Carbon Ecosystems and Associated Emissions 975
7. Conservation and Restoration of Blue Carbon Ecosystems as a Strategy for Climate Change Mitigation and Adaptation 983
8. Future of Blue Carbon 989
- References 989

29. Toward a Salt Marsh Management Plan for New York City: Recommendations for Strategic Restoration and Protection

CHRISTOPHER HAIGHT, MARIT LARSON,
REBECCA K. SWADEK, AND
ELLEN KRACAUER HARTIG

1. Introduction 997
2. Study Objectives and Approach 998
3. Salt Marsh Assessment Results 1001
4. Strategies for Addressing Wetland Threats 1005
5. Prioritization of Restoration and Protection Strategies 1006
6. Recommended Actions 1007
7. Summary and Next Steps 1018
- Acknowledgments 1020
- References 1020

30. Living Shorelines for Coastal Resilience

CAROLYN A. CURRIN

1. Introduction to Living Shorelines 1023
2. Living Shorelines in Estuarine Ecosystems 1024
3. Living Shoreline Implementation and Assessment 1034
4. Climate Adaptation and Living Shorelines 1044
5. Summary 1046
- Acknowledgments 1047
- References 1047
- Further Reading 1053

31. Mangrove Management: Challenges and Guidelines

DANIEL O. SUMAN

1. Mangrove Ecosystem Services 1055
2. Mangrove Losses 1056
3. Challenges to Mangrove Management 1056
4. International Guidelines for Mangrove Management 1061
5. Specific Strategies 1067
6. Summary—Moving Forward 1073
- References 1075

Subject Index 1081

Geographic Index 1099
