

Contents

List of contributors ix

1. An overview of the role of metals in biology

Robert R. Crichton

Introduction	1
Essential metal ions and their functions	2
Toxic metals	10
Metals in diagnosis and therapeutics	13
References	15
Further reading	16

2. Introduction to ligand field theory and computational chemistry

Matija Zlatar and Maja Gruden

Introduction	18
Introduction to quantum chemistry	18
Electronic structure of atoms	25
Symmetry	38
Ligand field theory	41
Introduction to computational chemistry	53
Concluding remarks	65
Acknowledgments	65
References	65

3. Molecular magnetochemistry

Grace G. Morgan and Irina A. Kühne

Introduction	69
Units and definitions	77
Contributions to magnetism in biologically relevant ions	92
Dimeric sites: exchange mechanisms and J values	99
Diamagnetism	105
Experimental methods	108
Conclusion	115

Problems	115
Answers	116
Acknowledgments	119
References	119
Further reading	119

4. EPR spectroscopy

W.R. Hagen

Why electron paramagnetic resonance spectroscopy?	121
What is electron paramagnetic resonance spectroscopy?	122
Anisotropy	125
A comparison of electron paramagnetic resonance versus NMR	126
Electron paramagnetic resonance spectrometer	128
What (bio)molecules give electron paramagnetic resonance?	132
Basic theory and simulation of electron paramagnetic resonance	133
Saturation	135
Concentration determination	137
Hyperfine interactions	139
High-spin systems	145
Applications overview	150
Test questions	152
Answers to test questions	153
References	153

5. Introduction to biomolecular nuclear magnetic resonance and metals

Inês B. Trindade and Ricardo O. Louro

Introduction	156
Properties of the matter relevant to nuclear magnetic resonance	157
Energy of nuclear magnetic resonance transitions	158
Macroscopic magnetization	160

Acting on magnetization	161
Relaxation	162
An nuclear magnetic resonance experiment	166
The chemical shift	167
Coupling: the interaction between magnetic nuclei	170
The nuclear Overhauser effect	174
DOSY: sizing up molecules	176
Chemical exchange	177
Multidimensional nuclear magnetic resonance	179
Metals in biomolecular nuclear magnetic resonance spectra	183
Hyperfine scalar coupling	184
Dipolar coupling	184
Contact relaxation	186
Dipolar relaxation	186
Curie relaxation	188
Residual dipolar couplings	188
Nuclear magnetic resonance of (semi-)solid samples	188
In-cell nuclear magnetic resonance	190
An nuclear magnetic resonance spectrometer: measuring macroscopic magnetization and relaxation	191
Care in obtaining nuclear magnetic resonance spectra of paramagnetic samples	192
Conclusions	197
Further reading	197
Useful physical constants	198
Exercises	198
Answers	199

6. ^{57}Fe -Mössbauer spectroscopy and basic interpretation of Mössbauer parameters

Eckhard Bill

Introduction	202
Principles	202
^{57}Fe hyperfine interactions	207
Isomer shift as informative hyperfine interaction	208
Electric quadrupole splitting	211
Magnetic hyperfine splitting	213
Combined hyperfine splitting	214
Applications—selected examples	214
Perspectives	224
Exercises	224
References	225

7. X-ray absorption and emission spectroscopy in biology

Martin C. Feiters and Wolfram Meyer-Klaucke

Outline of the X-ray absorption and emission spectroscopy in biology	230
An introductory biological X-ray absorption spectroscopy example: Mo, Cu, and Se in CO-dehydrogenase from <i>Oligotropha carboxidovorans</i>	231
X-ray absorption (near-)edge structure	236
X-ray emission spectroscopy in biology	239
Time-resolved X-ray absorption spectroscopy	244
X-ray absorption spectroscopy: X-ray—induced electron diffraction	245
Phase shifts and effect of atom type	248
Plane wave and muffin-tin approximation	252
Multiple scattering in biological systems	254
Strategy for the interpretation of EXAFS	257
Validation and Automation of EXAFS data analysis	258
X-ray absorption near-edge structure simulations with three-dimensional models	260
Metal—metal distances in metal clusters	261
Nonmetal trace elements: halogens	262
Summary: strengths and limitations	264
Conclusions: relations with other techniques	266
Exercises	266
Hints and answers to exercises	269
References	272

8. Resonance Raman spectroscopy and its application in bioinorganic chemistry

Wesley R. Browne

Introduction	276
The fundamentals of vibrational spectroscopy	277
Permanent, induced, and transition electric dipole moments	283
The (resonance) Raman experiment	293
Resonance enhancement of Raman scattering	298
SERS and SERRS spectroscopy	310
Experimental and instrumental considerations	311
Applications of resonance Raman spectroscopy	317
Conclusions	321
Questions	322
Answers to Questions	322
Acknowledgements	323

References 324
Further reading 324

9. An introduction to electrochemical methods for the functional analysis of metalloproteins

Vincent Fourmond and Christophe Léger

Introduction 326
Basics 327
Electrochemistry under equilibrium conditions:
potentiometric titrations 335
Dynamic electrochemistry 336
Diffusion-controlled voltammetry 339
Voltammetry of adsorbed proteins: protein film
voltammetry 343
Catalytic protein film voltammetry and
chronoamperometry 351
Exercises 365
Acknowledgements 365
Appendices 366
References 367

10. Structural biology techniques: X-ray crystallography, cryo-electron microscopy, and small-angle X-ray scattering

José A. Brito and Margarida Archer

Questions and purposes 376
Preamble 376
X-ray crystallography 377
Protein crystallization 380

Data collection 391
Phase determination 392
Model building and refinement 397
Structure analysis and model quality 400
X-ray free electron lasers 405
Cryo-electron microscopy 406
Small-angle X-ray scattering 409
General conclusion 411
Acknowledgements 412
References 412

11. Genetic and molecular biological approaches for the study of metals in biology

Robert L. Robson

Introduction and aims 418
Basic genetics and molecular genetics: origins and
definitions 419
Setting up: regulations, equipment, methods, and
resources 434
Approaches and systems 435
Molecular biology tools and methods 437
Genetic and molecular genetic methods 452
Bioinformatics 466
The OMICS revolution 469
Illustrative examples in the genetics and molecular
biology of N₂-fixation 471
References 472
Further reading 476
