

Contents

1 Introduction to the Study of Cell and Molecular Biology 1

- 1.1 The Discovery of Cells 2**
- 1.2 Basic Properties of Cells 3**
 - Cells are Highly Complex and Organized 3
 - Cells Possess a Genetic Program and the Means to Use It 5
 - Cells Are Capable of Producing More of Themselves 5
 - Cells Acquire and Utilize Energy 5
 - Cells Carry Out a Variety of Chemical Reactions 6
 - Cells Engage in Mechanical Activities 6
 - Cells Are Able to Respond to Stimuli 6
 - Cells Are Capable of Self-Regulation 6
 - Cells Evolve 7
- 1.3 Two Fundamentally Different Classes of Cells 7**
 - Characteristics That Distinguish Prokaryotic and Eukaryotic Cells 9
 - Types of Prokaryotic Cells 13
 - Types of Eukaryotic Cells: Cell Specialization 15
 - THE HUMAN PERSPECTIVE: The Prospect of Cell Replacement Therapy 18
 - The Sizes of Cells and Their Components 20
- 1.4 Viruses 21**
 - Viroids 24
 - EXPERIMENTAL PATHWAYS: The Origin of Eukaryotic Cells 25

2 The Chemical Basis of Life 31

- 2.1 Covalent Bonds 32**
 - Polar and Nonpolar Molecules 33
 - Ionization 33
- 2.2 Noncovalent Bonds 33**
 - THE HUMAN PERSPECTIVE: Free Radicals as a Cause of Aging 34
 - Ionic Bonds: Attractions Between Charged Atoms 35
 - Hydrogen Bonds 35
 - Hydrophobic Interactions and van der Waals Forces 35
 - The Life-Supporting Properties of Water 37
- 2.3 Acids, Bases, and Buffers 38**
- 2.4 The Nature of Biological Molecules 40**
 - Functional Groups 40
 - A Classification of Biological Molecules by Function 41
- 2.5 Four Types of Biological Molecules 42**
 - Carbohydrates 42
 - Lipids 47
 - Proteins 49

- THE HUMAN PERSPECTIVE: Protein Folding Can Have Deadly Consequences 65

Nucleic Acids 75

2.6 The Formation of Complex Macromolecular Structures 77

The Assembly of Tobacco Mosaic Virus Particles and Ribosomal Subunits 77

- EXPERIMENTAL PATHWAYS: Chaperones: Helping Proteins Reach Their Proper Folded State 78

3 Bioenergetics, Enzymes, and Metabolism 85

3.1 Bioenergetics 86

The Laws of Thermodynamics and the Concept of Entropy 86

Free Energy 88

3.2 Enzymes as Biological Catalysts 94

The Properties of Enzymes 94

Overcoming the Activation Energy Barrier 95

The Active Site 96

Mechanisms of Enzyme Catalysis 99

Enzyme Kinetics 101

- THE HUMAN PERSPECTIVE: The Growing Problem of Antibiotic Resistance 105

3.3 Metabolism 107

An Overview of Metabolism 107

Oxidation and Reduction: A Matter of Electrons 108

The Capture and Utilization of Energy 108

Metabolic Regulation 114

4 The Structure of Function of the Plasma Membrane 120

4.1 An Overview of Membrane Functions 121

4.2 A Brief History of Studies on Plasma Membrane Structure 123

4.3 The Chemical Composition of Membranes 125

Membrane Lipids 125

Membrane Carbohydrates 129

4.4 The Structure and Functions of Membrane Proteins 130

Integral Membrane Proteins 130

Studying the Structure and Properties of Integral Membrane Proteins 132

Peripheral Membrane Proteins 136

Lipid-Anchored Membrane Proteins 136

4.5 Membrane Lipids and Membrane Fluidity 136

The Importance of Membrane Fluidity 137

Maintaining Membrane Fluidity 138

The Asymmetry of Membrane Lipids 138

Lipid Rafts 138

- 4.6 The Dynamic Nature of the Plasma Membrane 139**
 The Diffusion of Membrane Proteins after Cell Fusion 140
 Restrictions on Protein and Lipid Mobility 141
 The Red Blood Cell: An Example of Plasma Membrane Structure 144

- 4.7 The Movement of Substances Across Cell Membranes 147**
 The Energetics of Solute Movement 147
 Diffusion of Substances through Membranes 148
 Facilitated Diffusion 156
 Active Transport 157
 ● THE HUMAN PERSPECTIVE: Defects in Ion Channels as a Cause of Inherited Disease 160

- 4.8 Membrane Potentials and Nerve Impulses 163**
 The Resting Potential 164
 The Action Potential 165
 Propagation of Action Potentials as an Impulse 166
 Neurotransmission: Jumping the Synaptic Cleft 168
 ● EXPERIMENTAL PATHWAYS: The Acetylcholine Receptor 171

5 Aerobic Respiration and the Mitochondrion 179

- 5.1 Mitochondrial Structure and Function 180**
 Mitochondrial Membranes 182
 The Mitochondrial Matrix 182
- 5.2 Oxidative Metabolism in the Mitochondrion 183**
 The Tricarboxylic Acid (TCA) Cycle 185
 The Importance of Reduced Coenzymes in the Formation of ATP 187
 ● THE HUMAN PERSPECTIVE: The Role of Anaerobic and Aerobic Metabolism in Exercise 188
- 5.3 The Role of Mitochondria in the Formation of ATP 188**
 Oxidation-Reduction Potentials 189
 Electron Transport 191
 Types of Electron Carriers 191
- 5.4 Translocation of Protons and the Establishment of a Proton-motive Force 198**
- 5.5 The Machinery for ATP Formation 199**
 The Structure of ATP Synthase 200
 The Basis of ATP Formation According to the Binding Change Mechanism 202
 Other Roles for the Proton-motive Force in Addition to ATP Synthesis 206
- 5.6 Peroxisomes 207**
 ● THE HUMAN PERSPECTIVE: Diseases that Result from Abnormal Mitochondrial or Peroxisomal Function 208

6 Photosynthesis and the Chloroplast 214

- 6.1 Chloroplast Structure and Function 216**
- 6.2 An Overview of Photosynthetic Metabolism 217**
- 6.3 The Absorption of Light 219**
 Photosynthetic Pigments 219

- 6.4 Photosynthetic Units and Reaction Centers 221**
 Oxygen Formation: Coordinating the Action of Two Different Photosynthetic Systems 222
 Killing Weeds by Inhibiting Electron Transport 228
- 6.5 Photophosphorylation 228**
 Noncyclic Versus Cyclic Photophosphorylation 229
- 6.6 Carbon Dioxide Fixation and the Synthesis of Carbohydrate 229**
 Carbohydrate Synthesis in C₃ Plants 230
 Carbohydrate Synthesis in C₄ Plants 234
 Carbohydrate Synthesis in CAM Plants 236

7 Interactions Between Cells and Their Environment 239

- 7.1 The Extracellular Space 240**
 The Extracellular Matrix 240
- 7.2 Interactions of Cells with Extracellular Materials 248**
 Integrins 248
 Focal Adhesions and Hemidesmosomes: Anchoring Cells to Their Substratum 252
- 7.3 Interactions of Cells with Other Cells 254**
 Selectins 255
 Immunoglobulins 256
 Cadherins 257
 ● THE HUMAN PERSPECTIVE: The Role of Cell Adhesion in Inflammation and Metastasis 259
 Adherens Junctions and Desmosomes: Anchoring Cells to Other Cells 260
 The Role of Cell-Adhesion Receptors in Transmembrane Signaling 262
- 7.4 Tight Junctions: Sealing the Extracellular Space 264**
- 7.5 Gap Junctions and Plasmodesmata: Mediating Intercellular Communication 266**
 Plasmodesmata 268
- 7.6 Cell Walls 268**

8 Cytoplasmic Membrane Systems: Structure, Function, and Membrane Trafficking 274

- 8.1 An Overview of the Endomembrane System 275**
- 8.2 A Few Approaches to the Study of Endomembranes 277**
 Insights Gained from Autoradiography 277
 Insights Gained from the Use of the Green Fluorescent Protein 277
 Insights Gained from the Biochemical Analysis of Subcellular Fractions 279
 Insights Gained from the Use of Cell-Free Systems 280
 Insights Gained from the Study of Mutants 281
- 8.3 The Endoplasmic Reticulum 282**
 The Smooth Endoplasmic Reticulum 284
 Functions of the Rough Endoplasmic Reticulum 284
 From the ER to the Golgi Complex: The First Step in Vesicular Transport 293
- 8.4 The Golgi Complex 293**
 Glycosylation in the Golgi Complex 296

	The Movement of Materials through the Golgi Complex	296
8.5	Types of Vesicle Transport and Their Functions	298
	COPII-Coated Vesicles: Transporting Cargo from the ER to the Golgi Complex	299
	COPI-Coated Vesicles: Transporting Escaped Proteins Back to the ER	300
	Beyond the Golgi Complex: Sorting Proteins at the TGN	302
	Targeting Vesicles to a Particular Compartment	304
8.6	Lysosomes	307
	● THE HUMAN PERSPECTIVE: Disorders Resulting from Defects in Lysosomal Function	309
8.7	Plant Cell Vacuoles	310
8.8	The Endocytic Pathway: Moving Membrane and Materials into the Cell Interior	311
	Endocytosis	311
	Phagocytosis	317
8.9	Posttranslational Uptake of Proteins by Peroxisomes, Mitochondria, and Chloroplasts	318
	Uptake of Proteins into Peroxisomes	318
	Uptake of Proteins into Mitochondria	318
	Uptake of Proteins into Chloroplasts	320
	● EXPERIMENTAL PATHWAYS: Receptor-Mediated Endocytosis	321
9	The Cytoskeleton and Cell Motility	328
9.1	Overview of the Major Functions of the Cytoskeleton	329
9.2	The Study of the Cytoskeleton	330
	The Use of Live-Cell Fluorescence Imaging	330
	The Use of In Vitro Single Molecule Motility Assays	332
	The Use of Cells with Altered Gene Expression	332
9.3	Microtubules	333
	Structure and Composition	333
	Microtubule-Associated Proteins	334
	Microtubules as Structural Supports and Organizers	335
	Microtubules as Agents of Intracellular Motility	336
	Motor Proteins That Traverse the Microtubular Cytoskeleton	338
	Microtubule-Organizing Centers (MTOCs)	342
	The Dynamic Properties of Microtubules	345
	Cilia and Flagella: Structure and Function	349
	● THE HUMAN PERSPECTIVE: The Role of Cilia in Development and Disease	350
9.4	Intermediate Filaments	357
	Intermediate Filament Assembly and Disassembly	358
	Types and Functions of Intermediate Filaments	359
9.5	Microfilaments	360
	Microfilament Assembly and Disassembly	361
	Myosin: The Molecular Motor for Actin Filaments	363
9.6	Muscle Contractility	368
	The Sliding Filament Model of Muscle Contraction	369
9.7	Nonmuscle Motility	374
	Actin-Binding Proteins	374
	Examples of Nonmuscle Motility and Contractility	377

10 The Nature of the Gene and the Genome 388

10.1	The Concept of a Gene as a Unit of Inheritance	389
10.2	Chromosomes: The Physical Carriers of the Genes	390
	The Discovery of Chromosomes	390
	Chromosomes as the Carriers of Genetic Information	391
	Genetic Analysis in <i>Drosophila</i>	392
	Crossing Over and Recombination	392
	Mutagenesis and Giant Chromosomes	394
10.3	The Chemical Nature of the Gene	395
	The Structure of DNA	395
	The Watson-Crick Proposal	397
	DNA Supercoiling	400
10.4	The Structure of the Genome	402
	The Complexity of the Genome	402
	● THE HUMAN PERSPECTIVE: Diseases that Result from Expansion of Trinucleotide Repeats	405
10.5	The Stability of the Genome	409
	Whole-Genome Duplication (Polyploidization)	409
	Duplication and Modification of DNA Sequences	409
	"Jumping Genes" and the Dynamic Nature of the Genome	411
10.6	Sequencing Genomes: The Footprints of Biological Evolution	415
	Comparative Genomics: "If It's Conserved, It Must Be Important"	416
	Genetic Variation	
	Within the Human Species Population	418
	● THE HUMAN PERSPECTIVE: Application of Genomic Analyses to Medicine	419
	● EXPERIMENTAL PATHWAYS: The Chemical Nature of the Gene	421

11 Gene Expression: From Transcription to Translation 429

11.1	The Relationship Between Genes and Proteins	430
	An Overview of the Flow of Information Through the Cell	431
11.2	An Overview of Transcription in Both Prokaryotic and Eukaryotic Cells	432
	Transcription in Bacteria	435
	Transcription and RNA Processing in Eukaryotic Cells	436
11.3	Synthesis and Processing of Ribosomal and Transfer RNAs	437
	Synthesizing the rRNA Precursor	438
	Processing the rRNA Precursor	440
	Synthesis and Processing of the 5S rRNA	442
	Transfer RNAs	443
11.4	Synthesis and Processing of Messenger RNAs	444
	The Machinery for mRNA Transcription	445
	Split Genes: An Unexpected Finding	447
	The Processing of Eukaryotic Messenger RNAs	450
	Evolutionary Implications of Split Genes and RNA Splicing	457

- Creating New Ribozymes in the Laboratory 458
- 11.5 Small Noncoding RNAs and RNA Interference 459**
 MicroRNAs: A Newly Discovered Network
 for Gene Regulation 462
 ● THE HUMAN PERSPECTIVE: Potential Clinical Applications
 of RNA Interference 461
- 11.6 Encoding Genetic Information 464**
 The Properties of the Genetic Code 464
- 11.7 Decoding the Codons: The Role of Transfer RNAs 467**
 The Structure of tRNAs 467
- 11.8 Translating Genetic Information 470**
 Initiation 470
 Elongation 473
 Termination 475
 mRNA Surveillance: No Nonsense Allowed 475
 Polyribosomes 476
 ● EXPERIMENTAL PATHWAYS: The Role of RNA as a Catalyst 478

12 The Cell Nucleus and the Control of Gene Expression 485

- 12.1 The Nucleus of a Eukaryotic Cell 486**
 The Nuclear Envelope 486
 Chromosomes and Chromatin 491
 ● THE HUMAN PERSPECTIVE:
 Chromosomal Aberrations and Human Disorders 501
 Epigenetics: There's More to Inheritance than DNA 506
 The Nucleus as an Organized Organelle 507
- 12.2 Control of Gene Expression in Bacteria 509**
 The Bacterial Operon 510
 Riboswitches 513
- 12.3 Control of Gene Expression in Eukaryotes 513**
- 12.4 Transcriptional-Level Control 515**
 The Role of Transcription Factors
 in Regulating Gene Expression 518
 The Structure of Transcription Factors 518
 DNA Sites Involved in Regulating Transcription 522
 Transcriptional Activation: The Role
 of Enhancers, Promoters, and Coactivators 525
 Transcriptional Repression 528
- 12.5 Processing-Level Control 531**
- 12.6 Translational-Level Control 532**
 Cytoplasmic Localization of mRNAs 532
 The Control of mRNA Translation 533
 The Control of mRNA Stability 535
- 12.7 Posttranslational Control:
Determining Protein Stability 537**

13 DNA Replication and Repair 542

- 13.1 DNA Replication 543**
 Semiconservative Replication 543
 Replication in Bacterial Cells 546
 The Structure and Functions of DNA Polymerases 552
 Replication in Eukaryotic Cells 556

13.2 DNA Repair 562

- Nucleotide Excision Repair 563
 Base Excision Repair 563
 Mismatch Repair 564
 Double-Strand Breakage Repair 565
 ● THE HUMAN PERSPECTIVE: The Consequences
 of DNA Repair Deficiencies 566
- 13.3 Between Replication and Repair 567**

14 Cellular Reproduction 570

- 14.1 The Cell Cycle 571**
 Cell Cycles in Vivo 572
 Control of the Cell Cycle 572
- 14.2 M Phase: Mitosis and Cytokinesis 579**
 Prophase 581
 Prometaphase 586
 Metaphase 588
 Anaphase 590
 Telophase 594
 Forces Required for Mitotic Movements 595
 Cytokinesis 596
- 14.3 Meiosis 599**
 The Stages of Meiosis 602
 ● THE HUMAN PERSPECTIVE: Meiotic Nondisjunction
 and Its Consequences 606
 Genetic Recombination During Meiosis 607
 ● EXPERIMENTAL PATHWAYS: The Discovery
 and Characterization of MPF 609

15 Cell Signaling and Signal Transduction: Communication Between Cells 616

- 15.1 The Basic Elements of Cell Signaling Systems 617**
- 15.2 A Survey of Extracellular Messengers
and Their Receptors 619**
- 15.3 G Protein-Coupled Receptors
and Their Second Messengers 620**
 Signal Transduction by G Protein-Coupled Receptors 620
 ● THE HUMAN PERSPECTIVE: Disorders Associated
 with G Protein-Coupled Receptors 623
 Second Messengers 624
 The Specificity of G Protein-Coupled Responses 628
 Regulation of Blood Glucose Levels 629
 The Role of GPCRs in Sensory Perception 632
- 15.4 Protein-Tyrosine Phosphorylation
as a Mechanism for Signal Transduction 634**
 The Ras-MAP Kinase Pathway 638
 Signaling by the Insulin Receptor 641
 Signaling Pathways in Plants 645
- 15.5 The Role of Calcium as an Intracellular Messenger 645**
 Regulating Calcium Concentrations in Plant Cells 648
- 15.6 Convergence, Divergence, and Crosstalk
Among Different Signaling Pathways 649**
 Examples of Convergence, Divergence,
 and Crosstalk Among Signaling Pathways 650

- 15.7 The Role of NO as an Intercellular Messenger 652
 15.8 Apoptosis (Programmed Cell Death) 653
 The Extensive Pathway of Apoptosis 654
 The Intrinsic Pathway of Apoptosis 655

16 Cancer 662

- 16.1 Basic Properties of a Cancer Cell 663
 16.2 The Causes of Cancer 665
 16.3 The Genetics of Cancer 666
 Tumor-Suppressor Genes and Oncogenes: Brakes
 and Accelerators 670
 16.4 New Strategies for Combating Cancer 682
 Immunotherapy 683
 Inhibiting the Activity
 of Cancer-Promoting Proteins 684
 Inhibiting the Formation
 of New Blood Vessels (Angiogenesis) 685
 ● EXPERIMENTAL PATHWAYS:
 The Discovery of Oncogenes 686

17 The Immune Response 693

- 17.1 An Overview of the Immune Response 694
 Innate Immune Responses 694
 Adaptive Immune Responses 696
 17.2 The Clonal Selection Theory
 as It Applies to B Cells 697
 Vaccination 700
 17.3 T Lymphocytes: Activation
 and Mechanism of Action 701
 17.4 Selected Topics on the Cellular
 and Molecular Basis of Immunity 703
 The Molecular Structure of Antibodies 703
 DNA Rearrangement of Genes Encoding
 B- and T-Cell Antigen Receptors 706
 Membrane-Bound Antigen Receptor Complexes 709
 The Major Histocompatibility Complex 709
 Distinguishing Self from Nonself 715
 Lymphocytes Are Activated by Cell-Surface Signals 716
 Signal Transduction Pathways Used
 in Lymphocyte Activation 717
 ● THE HUMAN PERSPECTIVE: Autoimmune Diseases 718
 ● EXPERIMENTAL PATHWAYS: The Role of the Major
 Histocompatibility Complex in Antigen Presentation 720

18 Techniques

in Cell and Molecular Biology 727

- 18.1 The Light Microscope 728
 Resolution 728
 Visibility 729
 Preparation of Specimens
 for Bright-Field Light Microscopy 730

Phase-Contrast Microscopy 730
 Fluorescence Microscopy (and Related Fluorescence-Based
 Techniques) 731

Video Microscopy and Image Processing 733
 Laser Scanning Confocal Microscopy 733

- 18.2 Transmission Electron Microscopy 734
 Specimen Preparation for Electron Microscopy 736
 18.3 Scanning Electron and Atomic Force Microscopy 740
 Atomic Force Microscopy 741
 18.4 The Use of Radioisotopes 742

- 18.5 Cell Culture 743
 18.6 The Fractionation of a Cell's Contents
 by Differential Centrifugation 744
 18.7 Isolation, Purification, and Fractionation
 of Proteins 746

Selective Precipitation 746
 Liquid Column Chromatography 746
 Polyacrylamide Gel Electrophoresis 749
 Measurement of Protein Concentration 751

- 18.8 Determining the Structure of Proteins
 and Multisubunit Complexes 752
 18.9 Purification of Nucleic Acids 753

- 18.10 Fractionation of Nucleic Acids 754
 Separation of DNAs by Gel Electrophoresis 754
 Separation of Nucleic Acids by Ultracentrifugation 754

- 18.11 Nucleic Acid Hybridization 756

- 18.12 Chemical Synthesis of DNA 758

- 18.13 Recombinant DNA Technology 758

Restriction Endonucleases 758
 Formation of Recombinant DNAs 760
 DNA Cloning 760

- 18.14 Enzymatic Amplification of DNA by PCR 763
 Applications of PCR 765

- 18.15 DNA Sequencing 765

- 18.16 DNA Libraries 767

Genomic Libraries 767
 cDNA Libraries 768

- 18.17 DNA Transfer into Eukaryotic Cells
 and Mammalian Embryos 769

- 18.18 Determining Eukaryotic Gene Function
 by Gene Elimination 769

In Vitro Mutagenesis 772

Knockout Mice 772

RNA Interference 774

- 18.19 The Use of Antibodies 774

Glossary G-1

Index I-1
