

CONTENTS

Foreword	vii
Preface	ix
1 GENETIC, MATHEMATICAL, AND ANTHROPOLOGICAL BACKGROUND	1
I. The Scope of Population Genetics	2
II. Genetics Background	5
III. Principles of Probability	14
IV. The Anthropological Connection	17
V. A Closing Thought	21
2 HARDY-WEINBERG EQUILIBRIUM	23
I. Genotype and Allele Frequencies	24
II. What is Hardy-Weinberg Equilibrium?	30
III. The Mathematics of Hardy-Weinberg Equilibrium	31
IV. Using Hardy-Weinberg Equilibrium	37
V. Extensions of Hardy-Weinberg Equilibrium	40
VI. Hardy-Weinberg Equilibrium and Evolution	44
VII. Summary	45
3 INBREEDING	49
I. Quantifying Inbreeding	51
II. Population Genetics and Inbreeding	62
III. Inbreeding in Human Populations	65
IV. Summary	75
4 MUTATION	77
I. The Nature of Mutations	77
II. Models of Mutation	81
III. Mutational History and Anthropological Questions	88
IV. Summary	96

5 GENETIC DRIFT	101
I. What is Genetic Drift?	102
II. Genetic Drift and Population Size	112
III. Effects on Genetic Variation	120
IV. Mutation and Genetic Drift	121
V. Coalescent Theory	125
VI. Summary	131
6 MODELS OF NATURAL SELECTION	139
I. How Does Natural Selection Work?	140
II. A General Model of Natural Selection	145
III. Types of Natural Selection	147
IV. Other Aspects of Selection	160
V. Summary	167
7 NATURAL SELECTION IN HUMAN POPULATIONS	181
I. Case Studies of Natural Selection in Human Populations	182
II. Are Humans Still Evolving?	198
III. Summary	203
8 GENE FLOW	205
I. The Evolutionary Impact of Gene Flow	206
II. Models of Gene Flow	208
III. Gene Flow and Genetic Drift	213
IV. Estimating Admixture in Human Populations	226
V. Summary	230
9 HUMAN POPULATION STRUCTURE AND HISTORY	237
I. Case Studies of Human Population Structure	238
II. The Origin of Modern Humans	242
III. Case Studies of Population Origins	247
IV. Summary	255
Glossary	257
References	267
Index	279
