About the Companion Website	xxiii

VOLUME ONE

1	Setting the Scene: What is So Special About Calcium?	1
1.1	Discovery of Calcium	2
1.2	A Natural History of Calcium	4
1.2.1	Calcium by the Sea	4
1.2.2	Calcium in Your Wake-Up Call	6
1.3	Elements of Life	8
1.4	Natural Occurrence of Calcium	11
1.4.1	Isotopes of Calcium	11
1.4.2	Geology of Calcium	11
1.4.3	Calcium Outside Cells	13
1.4.4	Calcium Inside Cells	18
1.5	Requirement of Cells for Ca^{2+}	19
1.5.1	Calcium in External Fluids	20
1.5.2	Requirement of Animal Cells for Calcium	21
1.5.3	Requirement of Plant Cells for Calcium	22
1.5.4	Requirement of Microorganisms for Calcium	22
1.6	Four Biological Roles of Calcium	23
1.6.1	Structural	23
1.6.2	Electrical	23
1.6.3	Cofactor	24
1.6.4	Intracellular Regulator	26
1.7	The Puzzle About Ca^{2+} Inside Cells	29
1.8	1983 and All That	30
1.9	Darwin and Intracellular Ca^{2+}	33
1.10	The Scene Set	34
1.11	'Ja Kalzium, das ist alles!'	36
2	Intracellular Ca^{2+} – Principles and Terminology	39
2.1	The Problem	41
2.2	Some Specific Questions	41
2.3	Types of Intracellular Ca^{2+} Signal	44
2.4	Rubicon Principle	48
2.4.1	Digital Versus Analogue Cell Events	48
2.4.2	Path to the Rubicon	51

2.5	Key Experiments to Answer Key Questions	54
2.6	Nomenclature – How Things are Named	57
2.6.1	English and Etymology	58
2.6.2	Organisms	59
2.6.3	Cells and Biochemistry	60
2.6.4	Genes	61
2.6.5	Proteins and Protein Sequences	62
2.6.6	Enzymes	63
2.6.7	Ion Channels	64
2.6.8	Agonists and Antagonists	66
2.6.9	Chemicals	67
2.6.10	Toxins	68
2.6.11	Drugs	68
2.6.12	Ca ²⁺ Indicators	69
2.6.13	Units	72
2.7	Model Systems	73
2.8	Darwin and Intracellular Ca ²⁺	73
2.9	Conclusions	79
3	One Hundred Years Plus of Intracellular Ca²⁺	81
3.1	Background	81
3.1.1	Pathway of Discovery and Invention for Intracellular Ca ²⁺	81
3.1.2	Model Systems	83
3.2	Why Study the History of Science?	85
3.3	Tale of Three Pioneers and What Followed	86
3.3.1	Experiments of Sydney Ringer (1836–1910)	86
3.3.2	Vision of Lewis Victor Heilbrunn (1892–1959)	90
3.3.3	Setsuro Ebashi (1922–2006): Pioneer of Intracellular Ca ²⁺ in Muscle Contraction	94
3.4	Ca ²⁺ as an Intracellular Regulator	95
3.4.1	Cell Theory	97
3.4.2	Origin of the Use of Ca ²⁺	97
3.4.3	Manipulation of Ca ²⁺	98
3.4.4	Measurement and Location of Free Ca ²⁺ in Live Cells	99
3.4.5	Identification of the Components Responsible for Regulating Free Ca ²⁺ Inside Cells	107
3.4.6	Discovery of Plasma Membrane Ca ²⁺ Pumps and Transporters	107
3.4.7	Discovery of How Ca ²⁺ is Released from the SR/ER	108
3.4.8	Discovery of IP ₃ and its Receptor	109
3.4.9	Discovery of the Ryanodine Receptor	111
3.4.10	Discovery of SOCE	113
3.4.11	Discovery of Ca ²⁺ Channels in the Plasma Membrane	116
3.4.12	Discovery of TRP Channels	119
3.4.13	Discovery of G-Proteins	119
3.4.14	Identification of the Ca ²⁺ Targets Inside Cells and How They Work	119
3.4.15	Intracellular Ca ²⁺ in Plants	122
3.4.16	Intracellular Ca ²⁺ in Bacteria	122
3.4.17	Pathology of Intracellular Ca ²⁺	123

3.5	Conceptual Development of Ca^{2+} as an Intracellular Regulator	124
3.6	Conclusions	127
4	How to Study Intracellular Ca^{2+} as Cell Regulator	129
4.1	Pathway to Discover the Role of Intracellular Ca^{2+} in a Cell Event	130
4.2	Manipulation of Extra- and Intracellular Ca^{2+}	131
4.3	Measurement of Intracellular Free Ca^{2+}	135
4.3.1	Absorbing Dyes	136
4.3.2	Fluorescent Ca^{2+} Indicators	137
4.3.3	Calibration of Fluors	144
4.3.4	Ca^{2+} -Activated Photoproteins	146
4.3.5	Calibration of Ca^{2+} -Activated Photoproteins	154
4.3.6	Ca^{2+} Indicators and GFP	158
4.3.7	Other Free Ca^{2+} Indicators for Whole Organs and Organisms	166
4.4	Detecting and Imaging Photons	166
4.5	Measurement of Total Cell Ca^{2+}	174
4.6	Calcium Buffers	176
4.7	Measurement of Ca^{2+} Fluxes	179
4.8	How to Study Ca^{2+} and Other Ion Channels	180
4.9	How to Discover How the Rise in Cytosolic Free Ca^{2+} Occurs and Then Returns to Rest	183
4.10	How to Discover the Intracellular Ca^{2+} Target and How it Works	184
4.11	Other Ions	185
4.12	Conclusions	185
5	How Ca^{2+} is Regulated Inside Cells	187
5.1	Principles	187
5.2	How Resting Cells Maintain Their Ca^{2+} Balance	191
5.3	Electrophysiology of Intracellular Ca^{2+}	194
5.4	Primary Stimuli Which Produce a Cytosolic Free Ca^{2+} Signal	200
5.5	Plasma Membrane Ca^{2+} Channels	204
5.5.1	Voltage-Gated Ca^{2+} Channels	205
5.5.2	TRP Channels	213
5.5.3	Receptor-Activated Ca^{2+} Channels	215
5.5.4	Mechanosensitive Channels	216
5.5.5	Store-Operated Calcium Entry - SOCE	218
5.5.6	Ca^{2+} Receptor	221
5.6	Regulation of Intracellular Ca^{2+} By, and Within, Organelles	222
5.6.1	Endo-/sarco-plasmic Reticulum (ER/SR)	223
5.6.2	Mitochondrial Ca^{2+}	234
5.6.3	Lysosomal and Endosomal Ca^{2+}	243
5.6.4	Secretory Vesicle Ca^{2+}	246
5.6.5	Peroxisomal Ca^{2+}	246
5.6.6	Control of Ca^{2+} by the Golgi	246
5.6.7	Nucleus and Ca^{2+}	248
5.6.8	Plant Organelles and Ca^{2+}	249
5.6.9	Acidocalcisomes	251
5.7	Second Messengers and Regulation of Ca^{2+} Signalling in the Cytosol	251

5.8	Pore Formers and Intracellular Ca^{2+}	255
5.9	Connexins and Gap Junctions	256
5.10	Other Ion Channels and Ca^{2+}	257
5.11	Conclusions	257
6	How Ca^{2+} Works Inside Cells	259
6.1	Biological Chemistry of Ca^{2+}	261
6.1.1	Ca^{2+} Ligands	262
6.1.2	Solvation	266
6.1.3	Problem of Activity Coefficients	268
6.1.4	Fractional Ca^{2+} Binding After a Ca^{2+} Signal	270
6.1.5	Kinetics	274
6.1.6	Diffusion	275
6.1.7	Solubility	275
6.2	Ca^{2+} -Binding Proteins	277
6.2.1	Types of Ca^{2+} -Binding Protein Inside Cells	277
6.2.2	Proteins with the EF-Hand Motif	279
6.2.3	Proteins with the C2 Motif	288
6.2.4	Proteins with a Cluster of Acidic Residues	291
6.2.5	Proteins Forming a Cluster of Oxygen Ligands From the Three-Dimensional Structure	294
6.3	Ca^{2+} and Other Intracellular Signals	298
6.3.1	Cyclic Nucleotides and Ca^{2+}	298
6.3.2	Ca^{2+} and PKC	303
6.3.3	NO and Ca^{2+}	304
6.3.4	Ca^{2+} , Inositol Phosphates and Other Intracellular Signals	305
6.4	Ca^{2+} and Monovalent Ions	305
6.4.1	Intracellular Ca^{2+} and K^{+} Conductance	306
6.4.2	Intracellular Ca^{2+} and Na^{+} Conductance	307
6.4.3	Ca^{2+} and Chloride Channels	308
6.5	Transition Metals, Other Divalent Cations and Lanthanides	309
6.6	Conclusions	310
7	How Ca^{2+} Regulates Animal Cell Physiology	313
7.1	Ca^{2+} and How Nerves Work	314
7.2	Ca^{2+} and Cell Movement	317
7.3	Muscle Contraction	317
7.3.1	How Intracellular Ca^{2+} Causes Skeletal Muscle to Contract	323
7.3.2	How Intracellular Ca^{2+} Causes the Heart to Beat	325
7.3.3	How Intracellular Ca^{2+} Causes Smooth Muscle to Contract	327
7.3.4	How Intracellular Ca^{2+} Works in Invertebrate Muscle	329
7.3.5	Special Case of Ca^{2+} and the Spasmoneme	330
7.4	Chemotaxis and Ca^{2+}	330
7.5	Intracellular Ca^{2+} and Secretion	334
7.5.1	Principles	334
7.5.2	Neurosecretion	340
7.5.3	Ca^{2+} , the Endocrine Pancreas and Insulin Secretion	341

7.5.4	Ca ²⁺ and the Salivary Gland	343
7.5.5	Ca ²⁺ and the Exocrine Pancreas	343
7.5.6	Ca ²⁺ and the Adrenal Medulla	344
7.5.7	Intracellular Ca ²⁺ and Mast Cells	344
7.5.8	Ca ²⁺ and Neutrophils, and Other Phagocytes	345
7.5.9	Ca ²⁺ and Platelets	348
7.5.10	Ca ²⁺ and Nematocysts	349
7.5.11	Ca ²⁺ and Coccolithophores	350
7.5.12	Conclusions about Secretion and Intracellular Ca ²⁺	351
7.6	Ca ²⁺ and Endocytosis	351
7.6.1	Principles	351
7.6.2	Phagocytosis	352
7.7	Intracellular Ca ²⁺ and Intermediary Metabolism	354
7.7.1	Ca ²⁺ Activation of Glucose Metabolism	354
7.7.2	Ca ²⁺ and Mitochondrial Intermediary Metabolism	357
7.7.3	Ca ²⁺ and Lipolysis and Lipogenesis	360
7.8	Intracellular Ca ²⁺ and Cell Growth	360
7.8.1	Principles	360
7.8.2	Cell Cycle and Ca ²⁺	361
7.8.3	Fertilisation and Intracellular Ca ²⁺	366
7.8.4	Differentiation and Intracellular Ca ²⁺	371
7.9	Intracellular Ca ²⁺ and the Immune Response	371
7.10	Intracellular Ca ²⁺ and Vision	373
7.10.1	Ca ²⁺ and Vertebrate Vision	374
7.10.2	Ca ²⁺ and Invertebrate Vision	376
7.11	Intracellular Ca ²⁺ and Other Senses	378
7.12	Ca ²⁺ and Bioluminescence	378
7.13	Intracellular Ca ²⁺ and Gene Expression	386
7.14	Conclusions	386

VOLUME TWO

8	Intracellular Ca ²⁺ and Microorganisms	389
8.1	The Puzzle	389
8.2	What Are Microorganisms?	391
8.3	What Do Microorganisms Do?	391
8.4	Indirect Evidence of a Role for Intracellular Ca ²⁺ in Bacteria	393
8.5	Potential Role of Intracellular Ca ²⁺ in Bacteria	394
8.6	How Much Ca ²⁺ is There in Bacteria?	397
8.7	How Bacteria Regulate Their Intracellular Ca ²⁺	398
8.7.1	Ca ²⁺ Influx into Bacteria	401
8.7.2	Ca ²⁺ Efflux in Bacteria	405
8.8	Ca ²⁺ -Binding Proteins in Bacteria	406
8.9	Regulation of Bacterial Events by Intracellular Ca ²⁺	406
8.9.1	Ca ²⁺ and Growth of Bacteria	406
8.9.2	Calcium and Bacterial Movement	410
8.9.3	Quorum Sensing and Gene Expression	415
8.9.4	Ca ²⁺ and Bacterial Metabolism	416

8.9.5	Bacterial Defence – Dormancy, Spore Formation and Germination	416
8.9.6	Bacterial Infection – Virulence, Competence and Defence	417
8.9.7	Development of Bacterial Structures	419
8.9.8	Ca ²⁺ and Gene Expression	422
8.9.9	Bacterial Transformation	422
8.9.10	Bacterial Metabolic Toxin Hypothesis	423
8.9.11	Intracellular Ca ²⁺ in Bacteria – Conclusions	424
8.10	Role of Intracellular Ca ²⁺ in Archaea	426
8.11	Intracellular Ca ²⁺ and Viruses	430
8.11.1	Eukaryotic Viruses	430
8.11.2	Bacterial Viruses – Bacteriophages	432
8.12	Intracellular Ca ²⁺ and Eukaryotic Microorganisms	433
8.12.1	Yeast	434
8.12.2	<i>Paramecium</i> and Related Ciliates	436
8.12.3	Slime Moulds	438
8.12.4	Luminous Radiolarians	440
8.13	Conclusions	440
9	Role of Intracellular Ca²⁺ in Plants and Fungi	443
9.1	Role of Ca ²⁺ in Plants	443
9.2	What Stimulates Plants?	444
9.2.1	Examples of Plant Cell Stimuli	444
9.2.2	Plant Hormones	446
9.2.3	Intracellular Signals in Plants	447
9.3	Requirement of Plants for Ca ²⁺	447
9.4	Where Ca ²⁺ is Stored in Plants	449
9.5	Measurement of Cytosolic Free Ca ²⁺ in Plants	449
9.6	Identification of the Components of the Ca ²⁺ Signalling System in Plants	455
9.6.1	Ca ²⁺ Pumps and Exchangers	455
9.6.2	Ca ²⁺ Channels in the Plasma Membrane	455
9.6.3	Plant Organelles and Ca ²⁺	456
9.6.4	Ca ²⁺ Stores Inside Plant Cells	458
9.6.5	Ca ²⁺ -Binding Proteins in Plants	458
9.6.6	Ca ²⁺ -Sensitive Genes in Plants	459
9.7	How Intracellular Ca ²⁺ Can Provoke Cellular Events in Plants	460
9.7.1	Light and Intracellular Ca ²⁺ in Plants	460
9.7.2	Control of Opening and Closing of Stoma/Stomata	460
9.7.3	Wind and Mechanical Stimulation of Plants	462
9.7.4	Gravity Sensing and Growth	462
9.7.5	Fertilisation and Germination	462
9.7.6	Legumes	463
9.7.7	Intermediary Metabolism	463
9.7.8	Transport by Phloem	464
9.7.9	Defence Against Stress	465
9.8	Fungal Elicitors	467
9.9	Apoptosis	467
9.10	Intracellular Ca ²⁺ and Plant Pathology	467
9.11	Ca ²⁺ in Mosses, Liverworts and Ferns	468
9.12	Darwin and Plants	469

9.13	Ca ²⁺ in Fungi	469
9.13.1	Biology of Fungi	469
9.13.2	Intracellular Ca ²⁺ and Yeast	471
9.13.3	Lichens	472
9.14	Ca ²⁺ and Slime Moulds	472
9.15	Conclusions	472
10	Pathology of Intracellular Ca²⁺	473
10.1	What is Pathology?	473
10.2	Types of Pathology	474
10.3	Intracellular Ca ²⁺ – Friend or Foe?	475
10.4	Intracellular Ca ²⁺ and Cell Death	476
10.4.1	Necrosis	478
10.4.2	Apoptosis	478
10.4.3	Autophagy	481
10.4.4	Lysis	481
10.4.5	Cell Death Conclusions	483
10.5	Genetic Abnormalities in Ca ²⁺ Signalling Proteins	483
10.5.1	Ca ²⁺ Channelopathies	484
10.5.2	Ca ²⁺ Pumpopathies	485
10.5.3	Mutations in ER Ca ²⁺ Release Proteins	486
10.5.4	Mutations in Ca ²⁺ Target Proteins	487
10.5.5	Proteins Associated with Ca ²⁺ Signalling	487
10.6	Oxygen and Cell Pathology	487
10.6.1	Ca ²⁺ Paradox	487
10.6.2	Oxidative Damage and Intracellular Ca ²⁺	489
10.7	Inappropriate Ca ²⁺ Signalling	490
10.7.1	Immune System and Other Organs in Disease	490
10.7.2	Bacterial Metabolic Toxin Hypothesis	492
10.8	ER Stress Response	494
10.9	Conclusions	498
11	Pharmacology of Intracellular Ca²⁺	499
11.1	Background to Compounds That Interact With Intracellular Ca ²⁺ and Ca ²⁺ Movement	499
11.2	Pharmacological Targets for Intracellular Ca ²⁺	504
11.3	Drugs Used Clinically That Interfere With Intracellular Ca ²⁺	505
11.4	Anaesthetics	506
11.4.1	General Anaesthetics	506
11.4.2	Local Anaesthetics	507
11.5	Ca ²⁺ Channel Effectors	508
11.5.1	Classes of Ca ²⁺ Channel Blocker	508
11.5.2	Dihydropyridines	512
11.5.3	Phenylalkylamines	513
11.5.4	Benzothiazepines	515
11.6	Hypertension	516
11.7	Arrhythmia, Tachycardia and Bradycardia	517
11.8	Angina	517

11.9 Heart Failure	518
11.10 Agents Which Inhibit or Activate Adrenergic Receptors	518
11.11 Cardiac Glycosides	520
11.12 Benzodiazapines	521
11.13 Anti-Psychotic Drugs	522
11.14 Stimulants and Drugs of Abuse	525
11.15 Analgesics	527
11.16 Anti-Depressants and Manic Depression	532
11.17 Diabetes	532
11.18 Muscle Relaxants	533
11.19 Anti-Allergics and Anti-Immune Compounds	535
11.20 Xanthines	535
11.21 Substances Used Experimentally to Interfere with Intracellular Ca^{2+}	536
11.21.1 Ca^{2+} Buffers and Ionophores	537
11.21.2 Ca^{2+} Channels	537
11.21.3 Agents Which Open or Close Voltage-Gated Ca^{2+} Channels	537
11.21.4 IP_3 Receptor Activators and Blockers	538
11.21.5 Ryanodine Receptor Agonists and Antagonists	541
11.21.6 Plasma Membrane Ca^{2+} Pump and Exchanger Inhibitors	541
11.21.7 SERCA Pump Inhibitors	541
11.21.8 Compounds Which Affect Store-Operated Calcium Entry (SOCE)	542
11.21.9 Mitochondrial Blockers	543
11.21.10 Ca^{2+} Target Inhibitors	544
11.22 Natural Toxins and Poisons	548
11.22.1 Natural Stings, Bites and Other Toxin-Producing Events	548
11.22.2 Cone Snail Toxins: Conotoxins	549
11.22.3 Spider Toxins	552
11.22.4 Scorpion Toxins	552
11.22.5 Pufferfish, Octopus, and frog Toxins	554
11.22.6 Jellyfish Sting Toxins	554
11.22.7 Hymenopteran Stings and Bites	556
11.22.8 Snake Venoms	557
11.23 Plant Toxins and Intracellular Ca^{2+}	557
11.24 Drugs and the Ca^{2+} Receptor	558
11.25 Bacteria	559
11.26 Ions and Intracellular Ca^{2+}	559
11.27 Antibodies and Intracellular Ca^{2+}	561
11.28 Summary and Conclusions	562
12 Darwin and 4000 Million Years of Intracellular Ca^{2+}	563
12.1 Darwin and Calcium	565
12.2 Evolution and Ca^{2+}	570
12.3 What is Evolution?	572
12.3.1 The Word Evolution	572
12.3.2 Process	572
12.3.3 Sequence of Evolution	575
12.3.4 Ca^{2+} and the Origin of Life	576
12.3.5 Ca^{2+} and the Origin of the Three Cell Types: Bacteria, Archaea and Eukaryota	577
12.3.6 Timescale	580

12.4	Evolution of Ca^{2+} Signalling	581
12.4.1	Origin of Ca^{2+} Signalling	581
12.4.2	Membrane Potential	581
12.4.3	Evolution of Ca^{2+} Signalling Based on Phylogenetic Comparisons	584
12.4.4	Evolution of Ca^{2+} -Binding Sites	589
12.4.5	Origin of the EF-Hand	590
12.5	Darwin and Knock-Outs	593
12.6	Conclusions	596
13	They Think It's All Over	599
13.1	What We Know About the Details of Intracellular Ca^{2+}	600
13.2	What We Don't Know About Intracellular Ca^{2+}	603
13.3	Intracellular Ca^{2+} at School and University	606
13.4	Inspiration of Intracellular Ca^{2+}	607
13.5	Communicating the Story of Intracellular Ca^{2+} to Others	610
13.6	End of the Beginning	615
	Bibliography	617
	Organism Index	739
	Subject Index	745
