## 1 Molecular Genetics in Ecology

01

What is molecular ecology?

01

The emergence of molecular ecology

02

Protein allozymes

04

Allozymes as genetic markers

06

An unlimited source of data

09

Mutation and recombination

10

Is genetic variation adaptive?

14

Polymerase chain reaction

15

Primers

18

Sources of DNA

20

Getting data from PCR

23

DNA sequencing

24

Second-generation sequencing

27

Third-generation sequencing

28

Quantitative PCR

29

Overview

31

Chapter summary

31

Useful websites and software

32

Further reading

33

Review questions

33

## 2 Molecular Markers in Ecology

35

Understanding molecular markers

35

Modes of inheritance

35

Nuclear versus organelle

36

Animal mitochondrial DNA

36

Plant mitochondrial DNA

39

Plastids, including chloroplast DNA

41

|                                                     |               |
|-----------------------------------------------------|---------------|
| Haploid chromosomes                                 | 44            |
