Preface, ix

About the companion website, xii

Section 1: Groundwork, 1

1 The excitement of developmental biology, 3

- Where the subject came from, 3
- Impact of developmental biology, 4
- Future impact, 4
- Further reading, 5

2 How development works, 7

- Ultrashort summary, 7
- Gametogenesis, 10
- Early development, 12
- Morphogenetic processes, 19
- Growth and death, 23
- Further reading, 25

3 Approaches to development: developmental genetics, 27

- Developmental mutants, 27
- Sex chromosomes, 29
- Maternal and zygotic, 29
- Genetic pathways, 29
- Genetic mosaics, 32
- Screening for mutants, 33
- Cloning of genes, 34
- Gain- and loss-of-function experiments, 34

- Gene duplication, 38
- Limitations of developmental genetics, 39
- Further reading, 40

4 Approaches to development: experimental embryology, 42

- Normal development, 42
- Developmental commitment, 45
- Criteria for proof, 51
- Further reading, 52

5 Approaches to development: cell and molecular biology techniques, 54

- Microscopy, 54
- Study of gene expression by molecular biology methods, 58
- Study of gene expression by in situ methods, 61
- Microinjection, 65
- Cell-labeling methods, 66
- Further reading, 68

Section 2: Major model organisms, 71

6 Model organisms, 73

- The big six, 73
- Access and micromanipulation, 75
- Genetics and genome maps, 75
- Relevance and tempo, 76
- Other organisms, 76
- Further reading, 78

7 *Xenopus*, 80

- Oogenesis, maturation, and fertilization, 80
- Normal development, 82
- Experimental methods, 87
- Processes of regional specification, 92
- Inductive interactions, 95
- Further reading, 104

8 The zebrafish, 106

- Normal development, 106
- Genetics, 110
- Embryological and molecular techniques, 114
- Regional specification, 115
- Other uses for the zebrafish, 118
- Further reading, 120

9 The chick, 121

- Normal development, 122
- Regional specification of the early embryo, 127
- Description of organogenesis in the chick, 133
- Further reading, 140

10 The mouse, 141

- Mammalian fertilization, 141
- Normal development, 145
- Regional specification, 153
- Human early development, 158
- Mouse developmental genetics, 159
- Other topics in mouse development, 164
- Further reading, 169

11 *Drosophila*, 171

- Insects, 171
- Normal development, 173
- Drosophila* developmental genetics, 178
- The developmental program, 181
- Further reading, 197

12 *Caenorhabditis elegans*, 198

- Adult anatomy, 198
- Embryonic development, 200
- Analysis of postembryonic development, 208
- Further reading, 215

Section 3: Organogenesis, 217**13 Techniques for studying organogenesis and postnatal development, 219**

- Genetics, 219
- Clonal analysis, 223

- Tissue and organ culture, 226
- Cell separation methods, 228
- Further reading, 230

14 Development of the nervous system, 231

- Overall structure and cell types, 231
- Anteroposterior patterning of the neural plate, 234
- Dorsoventral patterning of the neural tube, 238
- Neurogenesis and gliogenesis, 240
- The neural crest, 246
- Development of neuronal connectivity, 250
- Further reading, 257

15 Development of mesodermal organs, 259

- Somitogenesis and myogenesis, 259
- The kidney, 266
- Germ cell and gonadal development, 269
- Limb development, 274
- Blood and blood vessels, 284
- The heart, 287
- Further reading, 293

16 Development of endodermal organs, 296

- Normal development, 296
- Experimental analysis of endoderm development, 301
- The pancreas, 307
- Further reading, 312

17 *Drosophila* imaginal discs, 314

- Metamorphosis, 314
- Disc development, 318
- Further reading, 328

Section 4: Growth, regeneration, evolution, 331**18 Tissue organization and stem cells, 333**

- Types of tissue, 333
- Tissue renewal, 336
- Stem cells, 339
- Further reading, 360

19 Growth, aging and cancer, 362

- Growth: control of size and proportion, 362
- Aging, 371
- Cancer, 374
- Further reading, 382

20 Regeneration of missing parts, 384

- Distribution of regenerative capacity, 384
- Planarian regeneration, 385
- Insect limb regeneration, 388
- Vertebrate limb regeneration, 390
- General properties of regeneration, 399
- Further reading, 400

21 Applications of pluripotent stem cells, 401

- Cell transplantation therapy, 401
- Embryonic stem cells, 403
- Personalized pluripotent stem cells, 406
- Proposed cell transplantation therapies using pluripotent stem cells, 411
- Further reading, 417

22 Evolution and development, 419

- Macroevolution, 420
- The primordial animal, 424

- What really happened in evolution?, 429
- Further reading, 438

Appendix: Key molecular components, 440

- Genes, 440
- Transcription factor families, 442
- Signaling systems, 443
- Inducing factor families, 445
- Cytoskeleton, 449
- Cell adhesion molecules, 451
- Extracellular matrix components, 452
- Further Reading, 452

Glossary, 454

Index, 467
