Preface

About the companion website

1 Introduction

- 1.1 Historical brief
- 1.2 Units of measure
- 1.3 Choice of method
 - 1.3.1 Vegetation characteristics
 - 1.3.2 Biometrics and econometrics
- 1.4 Variation in vegetation
- 1.5 Observational units
- 1.6 Sampling
- 1.7 Frequency
- 1.8 Cover
- 1.9 Density
- 1.10 Biomass
- 1.11 Measurements with remote sensing
- 1.12 Monitoring and evaluation
- 1.13 Overview and summary
- 1.14 Bibliography

2 Sampling units for measurements

- 2.1 Frequency
- 2.2 Cover
 - 2.2.1 Points
 - 2.2.2 Point frames
 - 2.2.3 Point line
 - 2.2.4 Grid quadrats
 - 2.2.5 Line intercept
 - 2.2.6 Areas
 - 2.2.7 Plotless units
- 2.3 Density
 - 2.3.1 Plot size
 - 2.3.2 Shape of plots
 - 2.3.3 Line transects
 - 2.3.4 Distance methods

31

2.4	Biomass	31
2.4.1	Plot characteristics	32
2.4.2	Indirect methods	34
2.5	Tree measurements	35
2.5.1	Tree heights	35
2.5.2	Units of measure for tree diameters	37
2.5.3	Tree crown cover	40
2.6	Bibliography	41
3	Statistical concepts for field sampling	43
3.1	Characterization of data	44
3.1.1	Measures of data location	45
3.1.2	Measures of dispersion	48
3.2	Principles of data behavior	52
3.2.1	Patterns of data commonly observed	52
3.2.2	The normal distribution	53
3.2.3	Sample statistics and the normal distribution	55
3.2.4	Confidence limits	59
3.3	Sample size	59
3.3.1	When available budget is too small	62
3.3.2	Sample size for non-normal data	63
3.4	Data distributions	63
3.4.1	Bernoulli data distribution	64
3.4.2	Geometric data distribution	67
3.4.3	Pascal data distribution	67
3.4.4	Negative binomial data distribution	68
3.4.5	Binomial data distribution	69
3.4.6	Poisson data distribution	71
3.5	Bibliography	73
4	Spatial sampling designs for measurements	75
4.1	Simple random sampling	77
4.2	Cluster and systematic sampling	78
4.3	Two-stage sampling design	80
4.4	A role for satellite imagery	81
4.4.1	Sampling units	83
4.4.2	Spatial sampling	85
4.4.3	Studies of large areas	86
4.5	On-ground large-scale spatial analyses	89
4.6	Bibliography	95
5	Frequency	99
5.1	Brief history and definition	99
5.2	Estimates of frequency	101
5.2.1	Influences of size and shape of the plot	103
5.2.2	Requirements for valid comparisons	104

5.3	Minimal area and frequency	104
5.4	Plot size considerations	105
5.5	Applications for frequency data	112
5.5.1	Prediction and monitoring	112
5.6	Considerations	114
5.7	Bibliography	115
6	Cover	117
6.1	Basal area techniques	118
6.1.1	Diameter rule	119
6.2	Intercept techniques	120
6.2.1	Point intercept	120
6.2.2	Grid-quadrat frame	121
6.2.3	Vertical point frame	123
6.2.4	Horizontal point frame	123
6.2.5	Single points	125
6.3	Line-intercept methods	130
6.4	Crown diameter and canopy closure method	138
6.5	Variable plot methods	139
6.6	Semi-quantitative methods	141
6.7	Bibliography	148
7	Density	153
7.1	Related measurements	153
7.1.1	Frequency	153
7.1.2	Abundance	154
7.2	Limitations of the density estimate	155
7.3	Quadrat techniques	156
7.3.1	Distribution	156
7.3.2	Quadrat size and shape	158
7.3.3	Strip or rectangular quadrats	160
7.3.4	Considerations	161
7.4	Distance methods	161
7.4.1	Random populations	163
7.4.2	Distance methods for random and non-random populations	166
7.5	Line transect	169
7.6	Comments	171
7.7	Bibliography	172
8	Biomass	175
8.1	Herbaceous biomass	175
8.1.1	Harvesting	175
8.1.2	Measurement of biomass	176
8.1.3	Non-destructive methods	179
8.1.4	Productivity	185
8.1.5	Considerations of herbaceous biomass sampling	186

8.2	Shrub biomass	189
8.2.1	Non-destructive methods of shrub biomass	189
8.2.2	Considerations of shrub biomass sampling	200
8.3	Forest biomass	201
8.3.1	Regression models of biomass estimation	202
8.3.2	Bark biomass	203
8.4	Tree foliage biomass	204
8.5	Considerations for tree biomass sampling	207
8.5.1	Annual production of tree foliage	207
8.5.2	Production of tree biomass	208
8.6	Selection of sampling units for tree biomass	209
8.6.1	Sampling procedures	210
8.7	Bibliography	212
9	Monitoring and evaluation	217
9.1	Mapping units	218
9.1.1	Conventional mapping	219
9.1.2	Satellite imagery mapping	219
9.1.3	Naming vegetation units	220
9.1.4	Describing vegetation units	221
9.2	Basic considerations	221
9.3	Sampling and monitoring vegetation	223
9.3.1	Individual plant approach	224
9.3.2	Multispecies approach	225
9.4	Selection of a monitoring procedure	225
9.4.1	Vegetation measurements	225
9.4.2	Spectral imagery techniques	226
9.4.3	Weight estimate methods	226
9.5	Models versus measurements for monitoring	227
9.6	Case studies for remote sensing	228
9.7	Plant species evaluations	231
9.7.1	Plant association	231
9.7.2	Diversity indices	233
9.8	Bibliography	234
	Appendix Unit conversion tables	237
	Index	239
