xxi Contributors

1 *Escherichia coli*, Plasmids, and Bacteriophages

INTRODUCTION

I *ESCHERICHIA COLI*

1.1 Media Preparation and Bacteriological Tools

Minimal Media

Rich Media

Solid Media

Top Agar

Stab Agar

Tools

1.2 Growth in Liquid Media

Basic Protocol: Growing an Overnight Culture

Basic Protocol: Growing Larger Cultures

Basic Protocol: Monitoring Growth

1.3 Growth on Solid Media

Basic Protocol: Titering and Isolating Bacterial Colonies by Serial Dilutions

Basic Protocol: Isolating Single Colonies by Streaking a Plate

Basic Protocol: Isolating Single Colonies by Spreading a Plate

Support Protocol: Replica Plating

Support Protocol: Strain Storage and Revival

1.4 Basic Microbiology for Molecular Biologists

II VECTORS DERIVED FROM PLASMIDS

1.5 Maps of Plasmids

1.6 Minipreps of Plasmid DNA

Basic Protocol: Boiling Miniprep

Basic Protocol: Alkaline Lysis Miniprep

Alternate Protocol: Alkaline Lysis in 96-Well Microtiter Dishes

Support Protocol: Storage of Plasmid DNA

1.7 Large-Scale Preparations of Plasmid DNA	21
Preparation of Crude Lysates	21
Basic Protocol: Alkaline Lysis Method	21
Alternate Protocol: Boiling Method	22
Alternate Protocol: Triton Lysis Method	22
Support Protocol: Growth and Concentration of Cells	23
Purification of Plasmid DNA	23
Basic Protocol: PEG Precipitation	23
Alternate Protocol: CcCl Ethidium Bromide Equilibrium Centrifugation	23
1.8 Introduction of Plasmid DNA into Cells	25
Basic Protocol: Preparation and Transformation of Competent Cells	26
Using Calcium Chloride	27
Basic Protocol: High-Efficiency Transformation by Electroporation	27
III VECTORS DERIVED FROM LAMBDA AND RELATED BACTERIOPHAGES	
1.9 Introduction to Lambda Phages	28
1.10 Lambda as a Cloning Vector	30
Introduction	30
Maps	31
1.11 Plating Lambda Phage to Generate Plaques	39
Basic Protocol: Isolating a Single Plaque by Titering Serial Dilutions	39
Basic Protocol: Isolating Single Plaques by Streaking on a Lawn of Cells	39
Basic Protocol: Phage Transfection and in Vitro Packaging	40
1.12 Growing Lambda-Derived Vectors	40
Basic Protocol: Making a Stock of Phage by Plate Lysis	40
Alternate Protocol: Making a Liquid Lysate	41
Support Protocol: Storing Phage Lysates	41
1.13 Making Phage DNA from Liquid Lysates	42
Basic Protocol: Making DNA from Large-Scale Liquid Lysates	42
Alternate Protocol: Making DNA from Small-Scale Liquid Lysates	43
IV VECTORS DERIVED FROM FILAMENTOUS PHAGES	
1.14 Introduction to Vectors Derived from Filamentous Phages	44
1.15 Preparing and Using M13-Derived Vectors	47
Basic Protocol: Isolating Single Plaques Made by M13-Derived Vectors	47
Basic Protocol: Making Single-Stranded Phage DNA from M13-Derived Vectors	47
Basic Protocol: Isolation of Double-Stranded Vector DNA	47
Basic Protocol: Introduction of Phage DNA into Cells	48
Support Protocol: Determining Size of Inserts in Single-Stranded Vectors	48
Support Protocol: Determining Orientation of Inserts	49

2 Preparation and Analysis of DNA

INTRODUCTION

51

I PREPARATION OF GENOMIC DNA

2.1 Purification and Concentration of DNA from Aqueous Solutions

55

Basic Protocol: Phenol Extraction and Ethanol Precipitation of DNA

55

Alternate Procedures: Phenol Extraction and Concentration of RNA; Dilute

Solutions of DNA; DNA in Large Aqueous Volumes; Concentration of

DNA Using Butanol; Removal of Residual Phenol, Chloroform, or

Butanol by Ether Extraction; Precipitation of DNA Using Isopropanol;

and Removal of Low-Molecular-Weight Oligonucleotides and

Triphosphates by Ethanol Precipitation

56

Support Protocol: Buffering Phenol

58

2.2 Preparation of Genomic DNA from Mammalian Tissue

59

2.3 Preparation of Genomic DNA from Plant Tissue

60

2.4 Preparation of Genomic DNA from Bacteria

61

Basic Protocol: Miniprep of Bacterial Genomic DNA

61

Alternate Protocol: Large-Scale CsCl Prep of Bacterial Genomic DNA

62

Support Protocol: Removal of Polysaccharides from Existing

Genomic DNA Preps

63

II RESOLUTION AND RECOVERY OF LARGE DNA FRAGMENTS

2.5A Agarose Gel Electrophoresis

63

Basic Protocol: Resolution of Large DNA Fragments on Standard Agarose Gels

63

Support Protocol: Photography of DNA in Agarose Gels

65

2.5B Pulsed-Field Gel Electrophoresis

65

Basic Protocol: Field-Inversion Electrophoresis

65

Alternate Protocol: Alternating-Angle Electrophoresis

65

Support Protocol: Preparation of High-Molecular-Weight DNA

66

Samples and Size Markers

66

2.6 Isolation and Purification of Large DNA Restriction Fragments from Agarose Gels

68

Basic Protocol: Electroelution from Agarose Gels

68

Alternate Protocol: Isolation of DNA Fragments Using Low Gelling/Melting

69

Temperature Agarose Gels

70

Alternate Protocol: Electrophoresis onto DEAE-Cellulose Paper

70

Alternate Protocol: Removal of Oligonucleotide Fragments Using a Sephacryl

S-300 Column

71

Support Protocol: Rapid Estimation of DNA Concentration by Ethidium

Bromide Dot Quantitation

71

III RESOLUTION AND RECOVERY OF SMALL DNA FRAGMENTS

2.7 Nondenaturing Polyacrylamide Gel Electrophoresis

Basic Protocol

72

Alternate Protocol: Purification of Fragments by Electroelution from Polyacrylamide Gels

72

Support Protocol: Reusable Plastic Capillaries for Gel Loading

73

2.8 Sieving Agarose Gel Electrophoresis

74

IV ANALYSIS OF DNA SEQUENCES BY HYBRIDIZATION

2.9 Southern Blotting and Hybridization

Basic Protocol: Using Nitrocellulose Filters

75

Alternate Protocol: Using Nylon Filters

75

Alternate Protocol: Oligonucleotide Hybridization in Dried Agarose Gels

77

78

V CHROMATOGRAPHY OF NUCLEIC ACIDS

2.10 Separation of Double- and Single-Stranded Nucleic Acids Using Hydroxylapatite Chromatography

80

VI SYNTHESIS AND PURIFICATION OF OLIGONUCLEOTIDES

2.11 Synthesis of Oligonucleotides

Basic Protocol: Trityl Assay

81

Basic Protocol: Deprotection and Partial Purification

83

2.12 Purification of Oligonucleotides Using Denaturing Polyacrylamide Gel Electrophoresis

84

85

3 Enzymatic Manipulation of DNA and RNA

INTRODUCTION

87

I RESTRICTION ENDONUCLEASES

3.1 Digestion of DNA with Restriction Endonucleases

Basic Protocol

89

Alternate Protocol: Digesting DNA with Multiple Restriction Endonucleases

89

Alternate Protocol: Digesting Multiple Samples of DNA

89

Alternate Protocol: Partial Digestion of DNA with Restriction Endonucleases

91

Support Protocol: Methylation of DNA

91

II RESTRICTION MAPPING

3.2 Mapping by Multiple Endonuclease Digestions

104

3.3 Mapping by Partial Endonuclease Digestions

105

III ENZYMES FOR MODIFYING AND RADIOACTIVELY LABELING NUCLEIC ACIDS

3.4 Reagents and Radioisotopes Used to Manipulate Nucleic Acids	106
Stock Solutions	106
Enzyme Buffers	106
Enzyme Reaction Conditions and Applications	108
Nucleoside Triphosphates	113
Radioisotopes for Labeling Nucleic Acids	113
Basic Protocol: Measuring Radioactivity in DNA and RNA by Acid Precipitation	114
Basic Protocol: Separating Radioactively Labeled DNA from Unincorporated dNTP Precursors by Column Chromatography	115
Alternate Protocol: Spin-Column Procedure for Separating Radioactively Labeled DNA from Unincorporated dNTP Precursors	115
3.5 DNA-Dependent DNA Polymerases	117
<i>E. coli</i> DNA Polymerase I	117
Basic Protocol: Uniform Labeling of DNA by Nick Translation	117
Klenow Fragment of <i>E. coli</i> DNA Polymerase I	118
Basic Protocol: Labeling the 3' Ends of DNA	118
Basic Protocol: Repairing 3' or 5' Overhanging Ends to Generate Blunt Ends	119
Basic Protocol: Labeling of DNA by Oligonucleotide-Primed Synthesis	119
T4 DNA Polymerase	120
T7 DNA Polymerase	120
Modified T7 DNA Polymerase	121
<i>Taq</i> DNA Polymerase	121
3.6 Template-Independent DNA Polymerases	122
Terminal Deoxynucleotidyltransferase (Terminal Transferase)	122
3.7 RNA-Dependent DNA Polymerases	123
Reverse Transcriptase	123
3.8 DNA-Dependent RNA Polymerases	124
<i>E. coli</i> RNA Polymerase	124
Phage RNA Polymerases: SP6, T7, T3	124
3.9 DNA-Independent RNA Polymerases	125
Poly(A) Polymerase	125
3.10 Phosphatases and Kinases	126
Alkaline Phosphatases: Bacterial Alkaline Phosphatase and Calf Intestine Phosphatase	126
T4 Polynucleotide Kinase	126
Basic Protocol: Labeling 5' Ends by the Forward Reaction	126
Basic Protocol: Phosphorylating Synthetic Oligonucleotides by the Forward Reaction	126
Basic Protocol: Labeling 5' Termini by the Exchange Reaction	127

3.11 Exonucleases

Single-Stranded 5'→3' and 3'→5' Exonucleases

Double-Stranded 5'→3' Exonucleases

Double-Stranded 3'→5' Exonucleases

3.12 Single-Stranded Endonucleases

Bal 31 Nuclease

S1 Nuclease

3.13 Nonspecific Double-Stranded Endonucleases

Deoxyribonuclease I (DNase I)

3.14 DNA Ligases

T4 DNA Ligase

E. coli DNA Ligase

3.15 RNA Ligases

T4 RNA Ligase

IV CONSTRUCTION OF HYBRID DNA MOLECULES

3.16 Subcloning of DNA Fragments

Basic Protocol

Alternate Protocol: Ligation of DNA Fragments in Gel Slices

V SPECIALIZED APPLICATIONS

3.17 The Polymerase Chain Reaction: In Vitro Enzymatic Amplification of DNA

4 Preparation and Analysis of RNA

INTRODUCTION

I PREPARATION OF RNA FROM EUKARYOTIC AND PROKARYOTIC CELLS

4.1 Preparation of Cytoplasmic RNA from Tissue Culture Cells

Basic Protocol

Support Protocol: Removal of Contaminating DNA

4.2 Guanidinium Method for Total RNA Preparation

Basic Protocol: Preparation of RNA from Cultured Cells

Alternate Protocol: Extraction of RNA from Tissue

4.3 Phenol/SDS Method for Plant RNA Preparation

4.4 Preparation of Bacterial RNA

Basic Protocol: Isolation of RNA from Gram-Positive Bacteria

Alternate Protocol: Rapid Isolation of RNA from Gram-Negative Bacteria

4.5 Preparation of Poly(A) ⁺ RNA	148
II ANALYSIS OF RNA STRUCTURE AND SYNTHESIS	
4.6 S1 Analysis of Messenger RNA Using Single-Stranded DNA Probes	149
Basic Protocol: S1 Analysis of mRNA Using M13 Template	150
Alternate Protocol: Synthesis of Single-Stranded Probe from Double-Stranded Plasmid Template	152
Alternate Protocol: Quantitative S1 Analysis of mRNA Using Oligonucleotide Probes	152
Support Protocol: Controls for Quantitative S1 Analysis of mRNA	153
4.7 Ribonuclease Protection Assay	154
Basic Protocol	154
Support Protocol: Gel Purification of RNA Probes	155
Support Protocol: Preparation of Template DNA	156
4.8 Primer Extension	156
4.9 Analysis of RNA by Northern Hybridization	158
Basic Protocol: Denaturation of RNA Using Formaldehyde	158
Alternate Protocol: Denaturation of RNA Using Glyoxal and Dimethyl Sulfoxide	159
4.10 Identification of Newly Transcribed RNA	160
Basic Protocol: Nuclear Runoff Transcription in Mammalian Cells	160

5 Construction of Recombinant DNA Libraries

INTRODUCTION

I OVERVIEW OF RECOMBINANT DNA LIBRARIES

5.1 Overview of Genomic DNA Libraries	163
Representation and Randomness	165
Subgenomic Libraries	166
Vectors for Genomic DNA Libraries	166
5.2 Overview of cDNA Libraries	167

II PREPARATION OF INSERT DNA FROM GENOMIC DNA

5.3 Size Fractionation Using Sucrose Gradients	168
Basic Protocol: Sucrose Gradient Preparation of Size-Selected DNA	168
Support Protocol: Partial Enzyme Digestion	169
Support Protocol: Complete Enzyme Digestion	170

5.4	Size Fractionation Using Agarose Gels	170
	Basic Protocol: Electrophoresis on a Slab Agarose Gel	170
	Alternate Protocol: Electrophoresis on the Bull's-Eye Agarose Gel Apparatus	171
III PREPARATION OF INSERT DNA FROM MESSENGER RNA		
5.5	Conversion of mRNA into Double-Stranded cDNA	172
5.6	Methylation and Addition of Linkers to Double-Stranded cDNA	174
	Basic Protocol	174
	Support Protocol: Preparation of a CL-4B Column	176
IV PRODUCTION OF GENOMIC DNA AND cDNA LIBRARIES		
5.7	Production of a Genomic DNA Library	177
5.8A	Production of a Complete cDNA Library	178
	Basic Protocol: Ligation and Transfection for the Complete Library	178
	Support Protocol: Evaluation of a cDNA Library	179
	Support Protocol: Preparation of Test Insert for Evaluation of Phosphatased Phage Arms	179
5.8B	Production of a Subtracted cDNA Library	180
	Basic Protocol: Construction of the Subtracted Library	180
V AMPLIFICATION OF TRANSFORMED OR PACKAGED LIBRARIES		
5.9	Amplification of a Bacteriophage Library	183
5.10	Amplification of Cosmid and Plasmid Libraries	184

6 Screening Recombinant DNA Libraries

INTRODUCTION		185
I PLATING LIBRARIES AND TRANSFER TO FILTER MEMBRANES		
6.1	Plating and Transferring Bacteriophage Libraries	187
6.2	Plating and Transferring Cosmid and Plasmid Libraries	188
II HYBRIDIZATION WITH RADIOACTIVE PROBES		
6.3	Using DNA Fragments as Probes	190
	Basic Protocol: Hybridization in Formamide	190
	Alternate Protocol: Hybridization in Aqueous Solution	190

- 6.4 Using Synthetic Oligonucleotides as Probes 191
 Basic Protocol: Hybridization in Sodium Chloride/Sodium Citrate (SSC) 191
 Basic Protocol: Hybridization in Tetramethylammonium Chloride (TMAC) 192
 Support Protocol: Labeling the 5' Ends of Mixed Oligonucleotides 194

III PURIFICATION OF BACTERIOPHAGE, COSMID, AND PLASMID CLONES

- 6.5 Purification of Bacteriophage Clones 195
 6.6 Purification of Cosmid and Plasmid Clones 196

IV SCREENING WITH ANTIBODIES

- 6.7 Immunoscreening of Fusion Proteins Produced in Lambda Plaques 196
 Basic Protocol: Screening a λ gt11 Expression Library with Antibodies 197
 Alternate Protocol: Induction of Fusion Protein Expression with IPTG Prior to Screening with Antibodies 197
 6.8 Immunoscreening After Hybrid Selection and Translation 198

7 DNA Sequencing

INTRODUCTION

- 7.1 Overview of DNA Sequencing Methods 201
 7.2 Computer-Assisted DNA Sequence Data Entry and DNA Sequence Manipulation 205
 7.3 Construction of Nested Deletions for DNA Sequencing 207
 Basic Protocol: Using Exonuclease III to Construct Unidirectional Deletions 208
 Support Protocol: Protection of DNA from Exonuclease III Digestion Using $(\alpha S)dNTPs$ 210
 Alternate Protocol: Using BAL 31 Exonuclease to Construct Nested Deletions 212
 7.4 Sequencing by the Dideoxy Method 213
 Basic Protocol: Dideoxy Sequencing Using Modified T7 DNA Polymerase 217
 Alternate Protocol: Dideoxy Sequencing Using Klenow Polymerase 218
 Support Protocol: Preparation of Single-Stranded Phage Templates 219
 Support Protocol: Preparation of Denatured, Double-Stranded Templates 221
 Support Protocol: Preparing and Running a Sequencing Gel 222
 Alternate Protocol: Simplified "Salt-Gradient" Sequencing Gels 223
 7.5 Sequencing by the Chemical Method 225

8 Mutagenesis of Cloned DNA

INTRODUCTION	233
8.1 Oligonucleotide-Directed Mutagenesis without Phenotypic Selection	235
8.2A Mutagenesis with Degenerate Oligonucleotides: Creating Numerous Mutations in a Small DNA Sequence	238
8.2B Gene Synthesis: Assembly of Target Sequences Using Mutually Priming Long Oligonucleotides	242
8.3 Region-Specific Mutagenesis	244
Basic Protocol	244
Support Protocol: Enrichment of Mutant Clones	246
8.4 Linker-Scanning Mutagenesis of DNA	247
Basic Protocol: Linker Scanning Using Nested Deletions and Complementary Oligonucleotides	247
Alternate Protocol: Linker Scanning Using Oligonucleotide-Directed Mutagenesis	250

9 Introduction of DNA into Mammalian Cells

INTRODUCTION	251
I TRANSFECTION OF DNA INTO EUKARYOTIC CELLS	
9.1 Calcium Phosphate Transfection	255
Basic Protocol: Formation and Application of CaPO_4 Precipitate	255
Alternate Protocol: Glycerol/DMSO Shock of Mammalian Cells	256
9.2 Transfection Using DEAE-Dextran	257
Basic Protocol	257
Alternate Protocol: DEAE-Dextran Transfection in Batch	258
Alternate Protocol: Transfection of Cells in Suspension	258
Alternate Protocol: Chloroquine Treatment of Cells	259
9.3 Transfection by Electroporation	259
Basic Protocol	259
Support Protocol: Construction of Electroporation Cuvettes	260
Alternate Protocol: Electroporation into Plant Protoplasts	261
9.4 Optimization of Transfection	261
Optimizing DEAE-Dextran Transfection	261
Optimizing CaPO_4 Transfection	262
Optimizing Electroporation	263

9.5 Stable Transfer of Genes into Mammalian Cells	264
Basic Protocol	264
Selectable Markers for Mammalian Cells	265

II USES OF FUSION GENES IN MAMMALIAN TRANSFECTION

9.6 Harvest and Assay for Chloramphenicol Acetyltransferase	268
Basic Protocol	268
Alternate Protocol: In Situ Lysis of Cell for CAT Assay	270
9.7 Assay for Human Growth Hormone	271
9.8 Direct Analysis of RNA after Transfection	272
Transfection Efficiency	272
RNA Preparation	273
Analysis of RNA	273
Promoter Strength	273

III AMPLIFICATION OF GENES

9.9 Amplification Using Dihydrofolate Reductase	274
Basic Protocol	274
Alternate Protocol: Amplification by Cloning at Each Selective Step	275

10 Analysis of Proteins

INTRODUCTION

I QUANTITATION OF PROTEINS

10.1 Colorimetric Methods	283
Basic Protocol: Bradford Method	283
Alternate Protocol: Lowry Method	284

II ELECTROPHORETIC SEPARATION OF PROTEINS

10.2 One-Dimensional Gel Electrophoresis of Proteins	285
Basic Protocol: Denaturing (SDS) Discontinuous Gel Electrophoresis	285
Alternate Protocol: Nondenaturing Discontinuous Gel Electrophoresis	288
10.3 Two-Dimensional Gel Electrophoresis Using the ISO-DALT System	289
Basic Protocol: First-Dimension (Isoelectric Focusing) Gels	289
Basic Protocol: Second-Dimension (Gradient) Gels	291
Alternate Protocols for First-Dimension Gels: Isoelectric Focusing of Basic and Very Acidic Proteins	293
Support Protocol: Sample Solubilization	294

10.4	Two-Dimensional Gel Electrophoresis Using the O'Farrell System	294
	Basic Protocol: First-Dimension (Isoelectric Focusing) Gels	294
	Basic Protocol: Second-Dimension Gels (12% Acrylamide Slabs)	295
10.5	Electroelution of Proteins from Stained Gels	297
III DETECTION OF PROTEINS		
10.6	Detection of Proteins in Gels	300
	Basic Protocol: Coomassie Blue Staining	300
	Alternate Protocol: Silver Staining	301
10.7	Detection of Proteins on Blot Transfer Membranes	302
	Basic Protocol: India Ink Staining	302
	Alternate Protocol: Gold Staining	303
	Alternate Protocol: Iron Staining	303
10.8	Western Blotting	304
IV PURIFICATION OF PROTEINS BY CONVENTIONAL CHROMATOGRAPHY		
10.9	Gel-Filtration Chromatography	306
	Basic Protocol: Gel Filtration to Separate Proteins	306
	Alternate Protocol: Gel Filtration to Desalt Proteins	307
	Support Protocol: Selecting a GF Gel Matrix and Column	307
10.10	Ion-Exchange Chromatography	310
	Basic Protocol	310
	Support Protocol: Selecting an IEX Gel Matrix and Column	310
	Support Protocol: Empirical Determination of Protein Adsorption Conditions	311
10.11	Immunoaffinity Chromatography	314
	Basic Protocol: Isolation of Soluble or Membrane-Bound Antigens	314
	Alternate Protocol: Batch Purification	316
	Alternate Protocol: Low pH Elution	317
V PURIFICATION OF PEPTIDES AND PROTEINS BY HIGH-PERFORMANCE LIQUID CHROMATOGRAPHY		
10.12	Reversed-Phase High-Performance Liquid Chromatography	318
	Basic Protocol: Peptide and Protein Isolation	318
	Alternate Protocol: Protein Isolation	319
	Support Protocol: Degassing Water, Buffers, and Solvents	319
10.13	Ion-Exchange High-Performance Liquid Chromatography	320
	Basic Protocol: Anion-Exchange HPLC	320
	Basic Protocol: Cation-Exchange HPLC	320
10.14	Size-Exclusion High-Performance Liquid Chromatography	323

10.15 High-Performance Chromatofocusing and Hydrophobic-Interaction Chromatography	325
Basic Protocol: Chromatofocusing of Steroid Hormone Receptors and Other Proteins	325
Alternate Protocol: Chromatofocusing in the Presence of a Receptor-Stabilizing Agent	326
Basic Protocol: Hydrophobic-Interaction Chromatography of Steroid Hormone Receptors and Other Proteins	327
Alternate Protocol: Hydrophobic-Interaction Chromatography Using a More Hydrophobic Bonded Phase	327
VI PURIFICATION OF PROTEINS BY PRECIPITATION	
10.16 Immunoprecipitation	330
Basic Protocol: Immunoprecipitation of Radiolabeled Antigen with Antibody-Sepharose	330
Support Protocol: Preparation of Antibody-Sepharose	330
Alternate Protocol: Immunoprecipitation of Radiolabeled Antigen with Anti-Ig Serum	332
Alternate Protocol: Immunoprecipitation of Radiolabeled Antigen with Anti-Ig-Sepharose, Protein A-Sepharose, or <i>Staphylococcus aureus</i> Cells	332
Alternate Protocol: Immunoprecipitation Using More Strongly Dissociating Lysis and Wash Buffers	333
Alternate Protocol: Immunoprecipitation of Unlabeled Antigen with Antibody-Sepharose	333

Appendices

A.1 Reagents and Solutions	335
A.2 Standard Measurements, Data, and Abbreviations	357
Common Abbreviations	357
Useful Measurements and Data	359
Genome Size of Various Organisms	359
One- and Three-Letter Codes for Amino Acids	360
Codon Circle	360
Conversion Factors for Radioactivity	361
Physical Characteristics of Commonly Used Radionuclides	361
Radioactivity Decay Factors	362

A.3 Commonly Used Biochemical Techniques	363
Basic Protocol: Autoradiography	363
Basic Protocol: Silanizing Glassware	365
Basic Protocol: Dialysis	365
Alternate Protocol: Vacuum Dialysis	366
Support Protocol: Selection, Preparation, and Storage of Dialysis Membranes	367
A.4 Selected Suppliers of Reagents and Equipment	368
A.5 References	372
