List of Contributors	vii
Introduction <i>Andrew Hamilton</i>	i
PART ONE. HISTORICAL FOUNDATIONS	15
1 Reflections on the History of Systematics <i>Robert E. Kohler</i>	17
2 Willi Hennig's Part in the History of Systematics <i>Michael Schmitt</i>	47
3 Homology as a Bridge between Evolutionary Morphology, Developmental Evolution, and Phylogenetic Systematics <i>Manfred D. Laubichler</i>	63
PART TWO. CONCEPTUAL FOUNDATIONS	87
4 Historical and Conceptual Perspectives on Modern Systematics: Groups, Ranks, and the Phylogenetic Turn <i>Andrew Hamilton</i>	89

5	The Early Cladogenesis of Cladistics	
	<i>Olivier Rieppel</i>	117
6	Cladistics at an Earlier Time	
	<i>Gareth Nelson</i>	139
7	Patterson's Curse, Molecular Homology, and the Data Matrix	
	<i>David M. Williams and Malte C. Ebach</i>	151
8	History and Theory in the Development of Phylogenetics in Botany	
	<i>Brent D. Mishler</i>	189
PART THREE. TECHNOLOGY, CONCEPTS, AND PRACTICE		211
9	Well-Structured Biology: Numerical Taxonomy's Epistemic Vision for Systematics	
	<i>Beckett Sterner</i>	213
10	A Comparison of Alternative Form-Characterization: Approaches to the Automated Identification of Biological Species	
	<i>Norman MacLeod</i>	245
11	The New Systematics, the New Taxonomy, and the Future of Biodiversity Studies	
	<i>Quentin Wheeler and Andrew Hamilton</i>	287
	Index	303
