Preface page xi

Acknowledgments xv

List of SI prefixes xvi

List of abbreviations xvii

1 Animals in a chemical world 1

- 1.1 Intra-specific semiochemicals: pheromones and signature mixtures 2
- 1.2 "Innateness" of pheromones 16
- 1.3 How pheromone signals evolve from chemical cues 18
- 1.4 Pheromone diversity, specificity, and speciation 24
- 1.5 Production of pheromones 31
- 1.6 Pheromones: signal honesty and costs 32
- 1.7 Chemical profiles from which signature mixtures are learned for individual and colony recognition 37
- 1.8 Differences in response to pheromones 43
- 1.9 Releaser and primer effects of pheromones 43
- 1.10 Multimodal signals 44
- 1.11 Allohormone pheromones bypassing olfaction and taste 45
- 1.12 Pheromones and signature mixtures in humans? 45
- 1.13 Pollution disrupts chemical communication in aquatic organisms 45
- Summary 46
- Further reading 48

2 Methods for identifying and studying semiochemicals 49

- 2.1 Bioassays 49
- 2.2 Collection and analysis of semiochemicals 55
- 2.3 Using genetic and other techniques from molecular biology 59
- Summary 63
- Further reading 63

3 Pheromones, chemical cues, and sexual selection 65

- 3.1 Which sex should advertise? 66
- 3.2 External fertilization and chemical duets 69
- 3.3 Scramble competition 69
- 3.4 Pre-copulatory mate guarding 71
- 3.5 Contests 72
- 3.6 Mate choice: overview 73
- 3.7 Mate choice for good genes, mate quality, and direct benefits 75
- 3.8 Mate choice for genetic compatibility revealed by chemical cues 81
- 3.9 Coolidge effects and rejection of past mates: been there, done that 86
- 3.10 Alternative mating strategies 86
- 3.11 Post-copulatory sexual selection 87
- 3.12 Sex pheromones and speciation 90
- Summary 103
- Further reading 103

4 Coming together and keeping apart: aggregation pheromones and host-marking pheromones 105

- 4.1 Aggregation pheromones and Allee effects 105
- 4.2 Host-marking pheromones 110
- Summary 112
- Further reading 112

5 Territorial behavior and semiochemicals 113

- 5.1 Why scent mark on territories? 115
- 5.2 Scent-fence hypothesis 115
- 5.3 Scent-matching hypothesis 115
- 5.4 Border-maintenance hypothesis 120
- 5.5 Economics of scent-marking patterns in territories 121
- 5.6 Dear enemies or nasty neighbors 123
- 5.7 Counter-marking and over-marking 123

- 5.8 Scent marking in non-territorial mammals 124
- Summary 125
- Further reading 125
- 6 Semiochemicals and social organization 126**
- 6.1 Colony, kin, family, and individual recognition 126
- 6.2 Pheromones and reproduction in social groups: control or co-operative signaling? 133
- Summary 148
- Further reading 148
- 7 Pheromones and recruitment communication 150**
- 7.1 Foraging ecology and evolution of recruitment communication 150
- 7.2 Social insects as self-organizing systems 160
- Summary 164
- Further reading 164
- 8 Fight or flight: alarm pheromones and cues 165**
- 8.1 Evolution of alarm signals by kin selection 165
- 8.2 Subsocial insect families 165
- 8.3 Alert signals in deer family groups 165
- 8.4 Clonal sea anemones 167
- 8.5 Aphids 167
- 8.6 Social aphids 169
- 8.7 Termites and social Hymenoptera 169
- Summary 172
- Further reading 172
- 9 Perception and response to chemical communication: from chemosensory receptors to brains, behavior, and development 173**
- 9.1 How olfaction works: combinatorial processing of odorants including pheromones 173
- 9.2 Evolution of chemoreceptors 188
- 9.3 The many chemosensory subsystems in mammals and insects 192
- 9.4 The overlapping roles and integration of the accessory and main olfactory systems in mammals 198
- 9.5 Pheromones, sex, and brain circuits 201
- 9.6 Pheromones elicit stereotyped, but modulated, behavior and/or physiological responses 206
- 9.7 Pheromone primer effects 209
- 9.8 Learning of signature mixtures 215
- 9.9 Interactions between signature mixtures and pheromones 218
- Summary 221
- Further reading 222
- 10 Finding the source: pheromones and orientation behavior 223**
- 10.1 Investigating orientation behavior mechanisms 223
- 10.2 Ranging behavior: search strategies for finding odor plumes, trails, or gradients 226
- 10.3 Finding the source: orientation to pheromones 227
- Summary 243
- Further reading 243
- 11 Breaking the code: illicit signalers and receivers of semiochemicals 244**
- 11.1 Eavesdropping 244
- 11.2 Chemical communication in mutualisms 249
- 11.3 Deception by aggressive chemical mimicry 251
- 11.4 Social parasites using disguise to escape detection by social insect hosts 255
- Summary 259
- Further reading 259
- 12 Using semiochemicals: applications of pheromones 260**
- 12.1 Semiochemicals used with beneficial and domestic animals 260
- 12.2 Pheromones in pest management 263
- 12.3 Pest resistance to pheromones? 272

12.4 Commercialization: problems and benefits of pheromones	272
Summary	273
Further reading	273

13 On the scent of human attraction: human pheromones? 275

13.1 Olfactory cues to recognition: signature mixtures	278
13.2 Choosing mates for genetic compatibility: avoiding kin and going for optimum difference?	279
13.3 What molecules do humans give off?	284

13.4 Our sense of smell: perception of odors	291
13.5 Human pheromones?	295
13.6 Where next with human pheromones?	301
Summary: To smell is human	302
Further reading	303

Appendix An introduction to chemical terms for non-chemists 304
