Preface	xiii
1 Seaweed thalli and cells	1
1.1 Introduction: the algae and their environments	1
1.1.1 Seaweeds	1
1.1.2 Environmental-factor interactions	5
1.1.3 Laboratory culture versus field experiments	8
1.2 Seaweed morphology and anatomy	9
1.2.1 Thallus construction	9
1.2.2 The Littler functional-form model	11
1.2.3 Unitary, clonal, and coalescing seaweeds, and modular construction	15
1.3 Seaweed cells	17
1.3.1 Cell walls	17
1.3.2 Cytoplasmic organelles	21
1.3.3 Cytoskeleton and flagella apparatus	25
1.3.4 Cell growth	32
1.3.5 Cell division	32
1.4 Molecular biology and genetics	35
1.4.1 Advances in seaweed molecular biology	35
1.4.2 Seaweed genetics	42
1.4.3 Nucleocytoplasmic interactions	45
1.5 Synopsis	47
2 Life histories, reproduction, and morphogenesis	48
2.1 Introduction	48
2.2 Theme and variations	48

2.3 Environmental factors in life histories	54	4.2.2 Epibionts and allelopathy	140
2.3.1 Seasonal anticipators and responders	55	4.2.3 Exploitative competition	145
2.3.2 Temperature	56	4.3 Grazing	148
2.3.3 Light: photoperiod and wavelength	58	4.3.1 Impact of grazing on community structure and zonation	148
2.3.4 Other factors	65	4.3.2 Seaweed-herbivore interactions	156
2.4 Fertilization biology	68	4.4 Chemical ecology of seaweed-herbivore interactions	164
2.5 Settlement, attachment, and establishment	74	4.4.1 Bioactive chemicals	164
2.5.1 Settlement	74	4.4.2 Chemical defenses against grazers	166
2.5.2 Attachment	78	4.5 Symbiosis	170
2.5.3 Establishment	81	4.5.1 Mutualistic relationships	171
2.6 Thallus morphogenesis	83	4.5.2 Seaweed endophytes	172
2.6.1 Cell differentiation	85	4.5.3 Kleptoplasty	173
2.6.2 Development of the adult form	88	4.6 Synopsis	174
2.6.3 Seaweed growth substances	91		
2.6.4 Wound healing and regeneration	94		
2.7 Synopsis	98	5 Light and photosynthesis	176
3 Seaweed communities	100	5.1 An overview of photosynthesis	176
3.1 Intertidal zonation patterns	100	5.2 Irradiance	179
3.1.1 Tides	100	5.2.1 Measuring irradiance	179
3.1.2 Vertical zonation on intertidal rocky shores	101	5.2.2 Light in the oceans	182
3.1.3 Factors controlling vertical zonation	104	5.3 Light harvesting	188
3.2 Subtidal zonation on rocky shores	111	5.3.1 Plastids, pigments, and pigment-protein complexes	188
3.3 Seaweed communities	113	5.3.2 Functional form in light trapping	194
3.3.1 Tropical	113	5.3.3 Photosynthesis at a range of irradiances	197
3.3.2 Temperate	116	5.3.4 Action spectra and testing the theory of complementary chromatic adaptation	200
3.3.3 Polar	117	5.4 Carbon fixation: the "dark reactions" of photosynthesis	202
3.3.4 Tide pools	118	5.4.1 Inorganic carbon sources and uptake	202
3.3.5 Estuaries and salt marshes	119	5.4.2 Photosynthetic pathways in seaweeds	206
3.3.6 Deep-water seaweeds	120	5.4.3 Light-independent carbon fixation	207
3.3.7 Floating seaweeds	120	5.5 Seaweed polysaccharides	210
3.3.8 Other seaweed habitats and communities	121	5.5.1 Storage polymers	210
3.4 Invasive seaweeds	121	5.5.2 Wall matrix polysaccharides	211
3.5 Community analysis	124	5.5.3 Polysaccharide synthesis	215
3.5.1 Vegetation analysis	124	5.6 Carbon translocation	215
3.5.2 Population dynamics	128	5.7 Photosynthetic rates and primary production	218
3.6 Synopsis	133	5.7.1 Measurement of photosynthesis and respiration	218
4 Biotic interactions	136		
4.1 Foundation species and facilitation	136		
4.2 Competition	138		
4.2.1 Interference competition	138		

5.7.2 Intrinsic variation in photosynthesis	222	6.8.3 Nutrient storage and nutrient availability	282
5.7.3 Carbon losses	225	6.8.4 Growth rate and distribution	284
5.7.4 Autecological models of productivity and carbon budgets	227	6.8.5 Effects of nutrient enrichment on community interactions	286
5.7.5 Ecological impact of seaweed productivity	229	6.9 Synopsis	290
5.8 Synopsis	235	7 Physico-chemical factors as environmental stressors in seaweed biology	294
6 Nutrients	238	7.1 What is stress?	294
6.1 Nutrient requirements	238	7.2 Natural ranges of temperature and salinity	295
6.1.1 Essential elements	238	7.2.1 Open coastal waters	295
6.1.2 Essential organics: vitamins	239	7.2.2 Estuaries and bays	296
6.1.3 Limiting nutrients	240	7.2.3 Intertidal zone	297
6.2 Nutrient availability in seawater	240	7.3 Temperature effects	300
6.3 Pathways and barriers to ion entry	242	7.3.1 Chemical reaction rates	300
6.3.1 Membrane structure and ion movement	242	7.3.2 Metabolic rates	303
6.3.2 Movement to and through the membrane	243	7.3.3 Growth optima	304
6.3.3 Passive transport	243	7.3.4 Temperature tolerance	308
6.3.4 Facilitated diffusion	243	7.3.5 Physiological adaptation to changes in temperature	312
6.3.5 Active transport	244	7.3.6 Temperature tolerance in polar seaweeds	315
6.4 Nutrient-uptake kinetics	244	7.3.7 El Niño	319
6.4.1 Measurement of nutrient-uptake rates	246	7.3.8 Temperature and geographic distribution	321
6.4.2 Factors affecting nutrient-uptake rates	249	7.4 Biochemical and physiological effects of salinity	325
6.5 Uptake, assimilation, incorporation, and metabolic roles	255	7.4.1 Water potential	325
6.5.1 Nitrogen	256	7.4.2 Cell volume and osmotic control	326
6.5.2 Phosphorus	264	7.4.3 Effects of salinity changes on photosynthesis and growth	328
6.5.3 Calcium and magnesium	267	7.4.4 Tolerance and acclimation to salinity	330
6.5.4 Sulfur	274	7.5 Further stresses related to water potential: desiccation and freezing	333
6.5.5 Iron	274	7.5.1 Desiccation	333
6.5.6 Trace elements	274	7.5.2 Freezing	336
6.6 Long-distance transport (translocation)	275	7.6 Exposure to ultraviolet radiation	337
6.7 Growth kinetics	276	7.7 Variation in seawater pH and community-based impacts of ocean acidification	340
6.7.1 Measurement of growth kinetics	276	7.8 Interaction of stressors, oxidative stress, and cross adaptation	343
6.7.2 Growth kinetic parameters and tissue nutrients	276		
6.8 Effects of nutrient supply	279		
6.8.1 Surface-area:volume ratio and morphology	279		
6.8.2 Chemical composition and nutrient limitation	280		

7.9 Physiological stress indicators	346	9.6.2 Sewage effluent and toxicity	403
7.10 Synopsis	347	9.6.3 Other anthropogenic nutrient sources	407
8 Water motion	349	9.7 Radioactivity	408
8.1 Water flow	349	9.8 Thermal pollution	409
8.1.1 Currents	349	9.9 Synopsis	410
8.1.2 Physical nature of waves	350		
8.1.3 Laminar and turbulent flow over surfaces	352	10 Seaweed mariculture	413
8.1.4 Methods for measuring seawater flow and wave forces	355	10.1 Introduction	413
8.2 Water motion and biological processes	356	10.2 <i>Pyropia/Porphyra</i> mariculture	415
8.2.1 Function and form in relation to resource acquisition	356	10.2.1 Biology	416
8.2.2 Synchronization of gamete and spore release	359	10.2.2 Cultivation	417
8.3 Wave-swept shores	360	10.2.3 Problems in <i>Pyropia</i> culture	419
8.3.1 Biomechanical properties of seaweeds	360	10.2.4 Future trends	420
8.3.2 Wave action and other physical disturbances to populations	366	10.3 <i>Saccharina/Laminaria</i> for food and alginates	421
8.4 Synopsis	372	10.3.1 Cultivation	422
9 Pollution	374	10.3.2 Utilization and future prospects	423
9.1 Introduction	374	10.4 <i>Undaria</i> for food	424
9.2 General aspects of pollution	374	10.4.1 Cultivation	425
9.3 Metals	378	10.4.2 Food products and future trends	425
9.3.1 Sources and forms	378	10.5 <i>Kappaphycus</i> and <i>Eucheuma</i> for carrageenans	426
9.3.2 Adsorption, uptake, accumulation, and biomonitors	380	10.5.1 Biology	426
9.3.3 Mechanisms involving tolerance to toxicity	383	10.5.2 Cultivation	426
9.3.4 Effects of metals on algal metabolism	384	10.5.3 Production, uses, and future prospects	427
9.3.5 Factors affecting metal toxicity	388	10.6 <i>Gelidium</i> and <i>Gracilaria</i> for agar	428
9.3.6 Ecological aspects	389	10.6.1 <i>Gelidium</i> production and products	428
9.4 Oil	390	10.6.2 <i>Gracilaria</i> production and products	429
9.4.1 Fate of oil in the ocean	392	10.7 Tank cultivation	430
9.4.2 Effects of oil on algal metabolism, life cycles, and communities	394	10.8 Offshore/open-ocean cultivation	431
9.4.3 Ecological aspects	396	10.9 Integrated Multi-Trophic Aquaculture (IMTA) and biomitigation	431
9.5 Synthetic organic chemicals	398	10.10 Other uses of seaweeds	434
9.6 Eutrophication	400	10.11 Seaweed biotechnology: current status and future prospects	435
9.6.1 Sewage effluent and impacts of nutrient enrichment on algal communities	400	10.12 Synopsis	437
