Foreword	ix
List of contributors	xi
The plates will be found between pages 130 and 131*	
*These plates are available for download in colour from www.cambridge.org/9780521207997	
1 Sequence comparisons within the lipase family	1
2 A sequence analysis of lipases, esterases and related proteins	23
3 Lipases from plants	49
4 The three-dimensional structures of two lipases from filamentous fungi	77
5 Structural aspects of phospholipase C from <i>Bacillus cereus</i> and its reaction mechanism	95
6 Phospholipase A ₂ : mechanism and structure	119
7 Structure and mechanism of human pancreatic lipase	139
8 Kinetics of triglyceride lipases	159
9 Gastric lipases: cellular, biochemical and kinetic aspects	181
10 Lipase inhibitors	207
11 Substrates for phospholipase C and sphingomyelinase from <i>Bacillus cereus</i> . Relation between chemical structure and enzyme hydrolysis	225
12 Isolation and purification of lipases	243
13 Industrial applications of lipases	271
14 Lipases and phospholipases in organic synthesis	289
15 Medical aspects of triglyceride lipases	315
16 Protein engineering of lipases	337
Index	355
