

CONTENTS

	<i>Preface</i>	vii
	<i>Acknowledgements</i>	ix
1	Introduction	1
2	Crop improvement by breeding	5
2.1	Traditional methods	5
2.2	Improvements in breeding technology	7
2.3	The physiological basis of yield	9
2.4	Resistance to disease	11
2.5	Resistance to insect pests	16
2.6	Resistance to nematodes	17
2.7	General considerations on quality	17
3	Molecular biology and plant breeding	19
3.1	Gene isolation	20
3.2	Detection of genes and gene products	22
3.3	Construction of new genes	24
3.4	Insertion of genes into plants	24
3.5	The chloroplast and mitochondrial genomes	26
3.6	Molecular biology and plant physiology	26
3.7	Molecular biology and resistance to disease	28
3.8	Molecular biology and resistance to pests	30
3.9	Molecular biology and crop quality	33
3.10	Molecular biology and plant cell culture	33
4	Wheat	36
4.1	Biological limitations to yield	37
4.2	Diseases	42
4.3	Pests	52
4.4	Grain quality	57
4.5	Straw quality	60
4.6	Molecular biology and the improvement of wheat	60

5	Oilseed rape	70
5.1	Biological limitations to yield	72
5.2	Diseases	75
5.3	Pests	78
5.4	Seed quality	80
5.5	Molecular biology and the improvement of oilseed rape	84
6	Faba beans	88
6.1	Biological limitations to yield	89
6.2	Diseases	91
6.3	Pests	93
6.4	Seed quality	95
6.5	Molecular biology and the improvement of faba beans	98
7	Conclusion	101
	<i>References</i>	111
	<i>Further reading</i>	112
