1 INTRODUCTION	1
1.1 What is ethology?	2
1.2 Why study animal behavior?	2
1.3 What to study?	3
1.3.1 Levels of behavior	4
1.3.2 Areas of study	4
1.3.3 Categories of questions	8
1.4 Scientific method	10
1.5 Ethological approach	11
1.6 Descriptive versus experimental research	13

I GETTING STARTED **17**

2 A CONCEPTUAL MODEL OF ANIMAL BEHAVIOR	19
2.1 Continuous stream of behavior	19
2.2 Predisposition to behave: differing contributions	20
2.2.1 Genotype, environment (experience) and interaction	20
2.2.2 Anatomy and physiology	23
2.3 A model for a behavioral act	24
2.3.1 The animal	24
2.3.2 Stimuli	24
2.3.3 Behavior	26
2.3.4 Ethological model of innate behavior	26
2.3.5 Associative learning paradigms	28
2.3.6 Feedback	37
2.3.7 Feedforward	37
2.4 Application of the model	38
2.4.1 Conceptualizing the areas of study	38
2.4.2 Organizing the types of question	39
2.4.3 Focusing research	39
2.4.4 Developing an expanded or more focused model	41
2.4.5 Diagnosing and treating behavior problems in animals	44

2.5	Summary	44
3	CHOICE OF SUBJECTS	47
3.1	Species-oriented research	47
3.2	Concept-oriented research	50
3.2.1	<i>August Krogh principle</i>	51
3.2.2	<i>Suitability versus availability</i>	53
4	RECONNAISSANCE OBSERVATION	54
4.1	How to observe	54
4.1.1	<i>Watching versus observing</i>	54
4.1.2	<i>An exercise in observing</i>	58
4.1.3	<i>Field notes</i>	61
4.1.4	<i>Equipment</i>	65
4.2	How to describe behavior	81
4.2.1	<i>Empirical versus functional descriptions</i>	81
4.2.2	<i>Catalog, repertoire and ethogram</i>	86
4.3	Information resources	93
4.3.1	<i>Literature</i>	94
4.3.2	<i>Other researchers</i>	97
4.3.3	<i>Films and videotapes</i>	98
5	DELINEATION OF RESEARCH	100
5.1	Conceptualizing the problem	100
5.1.1	<i>What are the questions?</i>	100
5.1.2	<i>Stating objectives</i>	102
5.1.3	<i>Research hypotheses</i>	102
5.2	Using the model for a behavioral act	103
6	DESIGN OF RESEARCH	105
6.1	Description versus experimentation	105
6.2	Variables	107
6.3	Behavior units	109
6.3.1	<i>Classification of behavior units</i>	110
6.3.2	<i>Spatial and temporal aspects</i>	114
6.3.3	<i>Descriptions and definitions of behavior units</i>	115
6.3.4	<i>Number of behavioral units to measure</i>	123
6.3.5	<i>Validity</i>	124
6.4	Researcher-statistician	124
6.5	Basic experimental designs	126
6.5.1	<i>Variables, samples, treatments, blocks, individuals and measurements</i>	126

6.5.2	<i>Experimental designs</i>	129
6.5.3	<i>Random, haphazard and opportunistic samples</i>	144
6.6	Relative efficiency of experimental designs	147
6.7	Determination of sample size	148
7	EXPERIMENTAL RESEARCH	150
7.1	The varying variables	151
7.1.1	<i>Natural variation</i>	155
7.1.2	<i>Artificial manipulation</i>	157
7.2	Further examples of experimental manipulation	167
7.2.1	<i>In the field</i>	167
7.2.2	<i>In the laboratory</i>	174
7.3	Field to laboratory: a continuum	177
II	COLLECTING THE DATA	181
8	DATA COLLECTION METHODS	183
8.1	Research design and data collection	183
8.2	Scales of measurement	183
8.3	Sampling methods	189
8.3.1	<i>Focal-animal (pair, group) versus all-animal sampling</i>	189
8.3.2	<i>Ad libitum sampling</i>	195
8.3.3	<i>Continuous recording sampling methods</i>	197
8.3.4	<i>Time sampling</i>	201
8.3.5	<i>Summary</i>	206
8.4	Observer effects	210
8.5	Reliability	212
8.5.1	<i>Intra-observer or self-reliability</i>	213
8.5.2	<i>Inter-observer reliability</i>	214
8.6	Identification and naming of individuals	221
8.6.1	<i>Natural marks</i>	221
8.6.2	<i>Capture and marking</i>	223
8.6.3	<i>Assignment of numbers and names</i>	230
9	DATA-COLLECTION EQUIPMENT	233
9.1	Notebook and pencil	235
9.2	Data forms	236
9.2.1	<i>Characteristics of behavior units</i>	236
9.2.2	<i>Columns and rows</i>	237
9.2.3	<i>Coding</i>	238
9.2.4	<i>Data-form examples</i>	238

9.3	Clocks and counters	247
9.4	Calculators	250
9.5	Strip-chart event recorders	250
9.6	Stenograph	253
9.7	Computer-compatible data loggers	254
9.8	Microcomputers	256
9.8.1	<i>Data collection</i>	257
9.8.2	<i>Data storage and manipulation</i>	266
9.9	Audio-tape recorders	267
9.9.1	<i>Data collection on audio-tape recorders</i>	267
9.9.2	<i>Recording animal sounds</i>	269
9.9.3	<i>Playback of sounds</i>	273
9.9.4	<i>Ultrasonic detectors</i>	275
9.10	Analysis of animal sounds	276
9.10.1	<i>Equipment</i>	276
9.10.2	<i>Analysis of sound spectrograms</i>	282
9.10.3	<i>Computer analysis of recorded sounds</i>	283
9.11	Photography	284
9.11.1	<i>Still photography</i>	285
9.11.2	<i>Motion-picture photography</i>	293
9.11.3	<i>Film analysis</i>	296
9.12	Videotape recording and analysis	299
9.13	Stopwatches	307
9.14	Metronomes	308
9.15	Determining geographic location	309
9.15.1	<i>Global Positioning System and Argos Satellite System</i>	310
9.15.2	<i>Biotelemetry</i>	313
10	SELECTED EXAMPLES OF DATA COLLECTION AND DESCRIPTION	319
10.1	Individual behavior	319
10.1.1	<i>Terrestrial tetrapod locomotion</i>	319
10.2	Social behavior	321
10.2.1	<i>Displays</i>	321
10.2.2	<i>Dominant-subordinate relationships</i>	326
10.2.3	<i>Social organization</i>	338

III ANALYZING THE RESULTS	345
11 INTRODUCTION TO STATISTICAL ANALYSES	347
11.1 Statistical principles	347
11.2 Statistical hypotheses	348
11.3 Hypothesis testing	349
11.4 Type I and type II errors	351
11.5 Selecting the alpha level	352
11.6 Power of a test	353
11.7 Sample statistics	358
11.7.1 Sample distributions	358
11.7.2 Sample mean, mode and median	358
11.7.3 Skewness	359
11.7.4 Location	359
11.7.5 Variability	361
11.7.6 Standard deviation	361
11.7.7 Sample mean confidence interval	362
11.7.8 Coefficient of variation	366
12 SELECTION OF A STATISTICAL TEST	369
12.1 Parametric versus nonparametric statistical tests	369
12.1.1 Parametric tests	369
12.1.2 Data transformations	377
12.1.3 Nonparametric tests	379
13 PARAMETRIC STATISTICAL TESTS	381
13.1 Completely randomized design	381
13.1.1 Two independent samples	381
13.1.2 Three or more independent samples	384
13.2 Randomized block, matched pairs or repeated measures design	386
13.2.1 Two related or matched samples	386
14 NONPARAMETRIC STATISTICAL TESTS	391
14.1 Completely randomized design	391
14.1.1 One variable	391
14.1.2 Two variables	412
14.2 Randomized block, matched pairs and repeated measures design	421
14.2.1 One variable	421

15	RATES OF BEHAVIOR AND ANALYSIS OF SEQUENCES	440
15.1	Rates of behavior	440
15.2	Analysis of sequences	444
15.2.1	<i>Intra-individual sequences</i>	447
15.2.2	<i>Inter-individual sequences</i>	456
16	MULTIVARIATE ANALYSES	465
16.1	Matrices	465
16.2	Grouping behaviors	468
16.3	Grouping individuals	469
16.4	Describing differences among individuals	474
16.5	Discriminating among groups of individuals or behaviors	476
16.6	Analyzing sequences of behavior	479
16.6.1	<i>Factor analysis</i>	479
16.6.2	<i>Multidimensional scaling</i>	482
16.7	Summary	482
16.8	Software packages for statistical analyses	483
17	SPATIAL ORIENTATION AND TIME: CIRCULAR STATISTICS AND SPATIAL PATTERNS	485
17.1	Tests for randomness of directions (or times)	485
17.1.1	<i>Chi-square goodness-of-fit test</i>	487
17.1.2	<i>Rayleigh test</i>	489
17.1.3	<i>V test</i>	491
17.2	Difference between sample mean direction (or time period) and specified direction (or specified time period)	493
17.2.1	<i>Sample mean direction</i>	494
17.2.2	<i>Confidence interval</i>	494
17.3	Difference in sample mean directions between two, or more, groups of animals	495
17.3.1	<i>Two sample runs test</i>	495
17.3.2	<i>Watson-Williams two sample test</i>	496
17.3.3	<i>Watson-Williams multisample test</i>	500
17.4	Spatial patterns: animal-animal and animal-environment	502
17.4.1	<i>Animal-animal spatial relationships</i>	502
17.4.2	<i>Animal-environment spatial relationships</i>	510

18	INTERPRETATION AND PRESENTATION OF RESULTS	522
18.1	What do your results mean?	522
18.2	Visual representations	522
18.2.1	Graphs and figures	523
18.2.2	Vector diagrams	527
18.2.3	Kinematic graphs	530
18.2.4	Conceptual models	531
18.2.5	Other illustrations	536
18.3	Comparisons with previous results	539
18.4	Re-evaluation	539
18.5	Revising and restating hypotheses	539

APPENDICES 539

A	Statistical figures and tables	541
	Table A1. Factorials. Values of $n!$	541
	Table A2. Logarithms of factorials for $n+1$ to 199	542
	Table A3. Binomial coefficients	543
	Table A4. Critical values for the F-Max test for homogeneity of variance	544
	Table A5. Critical values of the t -statistic for a two-tailed test	545
	Table A6 ₁ . Critical values of F for the analysis of variance. Alpha=0.05	546
	Table A6 ₂ . Critical values of F for the analysis of variance. Alpha=0.01	549
	Table A7. Critical values for significance of the Pearson product moment correlation coefficient r	551
	Table A8 ₁ . Critical values of t for the one-sample and two-sample runs test. Alpha=0.05	552
	Table A8 ₂ . Critical values of t for the one-sample runs test	553
	Table A9. Critical values of the chi-square distribution for one-tailed tests	554
	Table A10. Critical values of U for the Mann-Whitney test	555
	Table A11. Critical values for the Kolmogorov-Smirnov two-sample, one-tailed test for small samples	556
	Table A12. Critical values for the Kolmogorov-Smirnov two-sample, two-tailed test for small samples	560
	Table A13. Critical values for the Kolmogorov-Smirnov two-sample, two-tailed test for large samples	564
	Table A14. Critical values for the Kruskal-Wallis one-way analysis of variance	565
	Table A15. Critical values of Q for Dunn's multiple comparison test	567
	Table A16. Critical values of S for Kendall's Coefficient of Concordance for small samples	568
	Table A17. Probabilities for the two-tailed sign test	569
	Table A18. Critical values of T for the Wilcoxon matched-pairs signed-ranks test	570
	Table A19. Critical values of Spearman's Rho correlation coefficient	571
	Table A20. Critical values of Kendall's tau correlation coefficient	573
	Table A21. Critical values of q for Dunnett's test	574
	Table A22. Values of $\log n$ and $-\log p$	576
	Table A23. Values of sine, cosine and tangent for direction and time	578
	Table A24. Critical values of u for the V test	589

Table A25. Alpha levels of h for circular statistics two-sample runs test	591
Table A26. Point estimation of k for the Watson-Williams two-sample test	592
Figure A1. Chart for determining a confidence interval for the mean angle with a 99% confidence coefficient	594
Figure A2. Chart for determining a confidence interval for the mean angle with a 99% confidence coefficient	595
