

BRIEF CONTENTS

Chapter 1 Introduction 2

Part I Molecular Foundations of Genetics

- Chapter 2 DNA Structure and Replication 20
- Chapter 3 Transcription and RNA Processing 56
- Chapter 4 Translation and Protein Function 88
- Chapter 5 Mutation 124
- Chapter 6 An Integrated View of Gene Expression 156

Part II Genetics of Cells

- Chapter 7 Bacterial Genetics 178
- Chapter 8 Regulation of Gene Expression 216
- Chapter 9 Recombinant DNA and Molecular Analysis 254
- Chapter 10 Eukaryotic Genome Organization 294
- Chapter 11 Mitosis, Meiosis, and Life Cycles 320

Part III Genetics of Organisms

- Chapter 12 Mendelian Genetics 346
- Chapter 13 Variations on Mendel's Theme 380
- Chapter 14 Sex Determination and Sex-Related Inheritance 418
- Chapter 15 Chromosome Mapping 444

Chapter 16 Genetic Fine Structure 480

Chapter 17 Alterations in Chromosome Number and Structure 512

Chapter 18 Extranuclear Inheritance 548

Part IV Genetics of Populations

- Chapter 19 Population Genetics 580
- Chapter 20 Quantitative Genetics 606
- Chapter 21 Evolutionary Genetics 632

Part V Gene Expression and the Organism

- Chapter 22 Transposable Elements 660
- Chapter 23 Developmental Genetics 682
- Chapter 24 Genes and Cancer 700
- Chapter 25 Genes and Immunity 720

Part VI Applications of Genetics

- Chapter 26 Genetics in Medicine and Forensics 742
- Chapter 27 Genetics in Agriculture and Industry 762
- Chapter 28 Legal and Ethical Issues in Genetics 786
- Solutions to Selected Problems 801
- Glossary 809
- Index 821

Chapter 1	
Introduction	2
1.1 Genetics in Human Society	3
1.2 The Universality of Genetic Principles	6
1.3 Model Organisms	7
1.4 Organizing the Study of Genetics	9
1.5 The Concept of the Gene	10
1.6 Genetic Analysis	13
PART I	
MOLECULAR FOUNDATIONS OF GENETICS	
Chapter 2	
DNA Structure and Replication	20
2.1 The Genetic Material	21
The Transforming Principle	22
DNA as the Transforming Principle	22
The Genetic Material in Bacterial Viruses	24
2.2 Nucleic Acid Structure	25
The DNA Molecule	26
Nucleotide Structure	26
The RNA Molecule	28
Base Pairing and Models for Double-Stranded DNA	28
Base-Pairing Rules	30
The Double Helix	31
Alternative Forms of DNA	32
2.3 Semiconservative DNA Replication	33

2.4 The Process of DNA Replication	37
Separating and Stabilizing DNA Strands	37
Synthesizing New DNA Strands	38
Semidiscontinuous DNA Replication	38
Simultaneous Synthesis of Leading and Lagging Strands	41
Proofreading Newly Synthesized DNA	42
Replication of Eukaryotic DNA	43
2.5 Replication of Entire DNA Molecules	44
Origins of Replication	44
Bidirectional DNA Replication	45
Strategies for Replicating Circular DNA	46
Strategies for Replicating Linear DNA	50
Chapter 3	
Transcription and RNA Processing	56
3.1 The Central Dogma	57
3.2 Overview of Transcription and RNA Processing in Prokaryotes and Eukaryotes	58
3.3 Initiation of Transcription	61
Conserved Sequences in Promoters	62
Conserved Sequences in Prokaryotic Promoters	62
Prokaryotic RNA Polymerase	64
Conserved Sequences in Eukaryotic Promoters	64
Transcription Factors and the Basal Eukaryotic Transcription Complex	66
Enhancers	66

3.4 Elongation 69

3.5 Termination 69

Prokaryotic Termination 70

Eukaryotic Termination 72

3.6 Transcription of rRNAs and tRNAs 73

Large Precursor rRNAs 73

5S rRNAs and tRNAs 75

3.7 mRNA Processing 75

5' Capping 75

3' Polyadenylation 75

Intron Removal and Exon Splicing 76

The Mechanism of Intron Removal and Exon Splicing 77

3.8 Processing of rRNAs and tRNAs 79

rRNA Processing 79

tRNA Processing 81

Chapter 4

Translation and Protein Function 88

4.1 Amino Acids and Polypeptides 89

4.2 The Genetic Code 91

From Nucleotides to Amino Acids 91

The Reading Frame for Translation 94

4.3 Ribosomes, the Sites of Translation 95

4.4 The Role of tRNA 99

tRNA Structure 99

Amino Acid Specificity of tRNAs 100

Degeneracy and the Wobble Hypothesis 102

4.5 Deciphering the Genetic Code 103

Demonstration of Nonoverlapping Codons 104

Indirect Approaches 106

Exceptions to the Genetic Code 106

4.6 Initiation of Translation 107

Prokaryotic Initiation 107

Eukaryotic Initiation 109

4.7 Elongation 111

4.8 Termination 111

4.9 Protein Structure and Function 113

Protein Modification and Processing 113

Protein Function 117

Enzymes 117

Chapter 5

Mutation 124

5.1 Types of Mutations 125

Substitution, Deletion, and Insertion Mutations 126

Trinucleotide Repeat Expansions 128

Mutations and Protein Function 131

Mutations Outside of the Transcribed Region of a Gene 131

Forward Mutations and Reversions 131

5.2 Spontaneous Mutation 133

Tautomeric Shifts 133

Mutations in Repeated DNA Segments 133

Spontaneous Lesions 135

5.3 Induced Mutations 136

Radiation 137

Chemical Mutagens 138

5.4 DNA Repair Mechanisms 142

Mechanisms That Prevent DNA Damage 142

Mechanisms That Repair Damaged DNA 142

Excision Repair Mechanisms 143

Postreplication Repair 144

SOS Response and Mutagenesis 145

Transcription-Repair Coupling 147

Mutations in Genes That Encode Repair System Enzymes 150

Chapter 6

An Integrated View of Gene Expression 156

6.1 The Anatomy of a Gene and Its Expression: The Human β -Globin Gene 158

6.2 Mutations in the β -Globin Gene 161

Sickle-Cell Anemia 161

β -Thalassemia 161

6.3 Enzymes, Biochemical Pathways, and Mutation 163

Biochemical Pathways 163

Mutations and Biochemical Pathways 164

The One Gene-One Polypeptide Hypothesis and Biochemical Pathways 170

PART II GENETICS OF CELLS

Chapter 7

Bacterial Genetics 178

7.1 Bacterial Culture 179

Bacterial Growth Media 180

Detection of Mutations and Preparation of Pure Cultures 180

7.2 Structure of Bacterial Chromosomes 183

7.3 DNA Transfer and Recombination 184

Recombination of Single-Stranded DNA 186

Recombination of Double-Stranded DNA 188

Transfer Mechanisms 188

7.4 Transformation 188

7.5 Conjugation 190

The F Factor 191

Hfr Cells 193

F' Factors 200

Complementation Analysis 200

7.6 Phage Life Cycles 202

7.7 Transduction 205

Specialized Transduction 206

Generalized Transduction 207

7.8 Genome Sequencing 207

Chapter 8

Regulation of Gene Expression 216

8.1 The *lac* Operon 218

Function of the *lac* Operon 218

Structure and Regulation of the *lac* Operon 218

8.2 Mutations in the *lac* Operon 222

Repressor Gene Mutations 222

Operator Mutations 224

Mutations in Enzyme Genes 224

Trans and Cis Effects of Mutations in Merozygotes 224

Negative and Positive Regulation of the *lac* Operon 227

8.3 The *trp* Operon 229

Function and Regulation of the *trp* Operon 229

Attenuation of the *trp* Operon 230

8.4 Regulation of Lysis and Lysogeny 233

8.5 Transcriptional Gene Regulation in Eukaryotes 237

Transcription Factors and Eukaryotic Gene Regulation 237

Environmental Stimuli That Activate Gene Expression 240

DNA Methylation 242

8.6 Gene Regulation Beyond Transcription 244

Transcript Processing 244

Translational Regulation 245

Posttranslational Regulation 246

Chapter 9

Recombinant DNA and Molecular Analysis 254

9.1 Recombinant DNA 256

Restriction Endonucleases and Methylases 256

Recombination of DNA Fragments 259

9.2 Plasmid Cloning Vectors 259

An Example of a Plasmid Cloning Vector: pBR322 260

Blunt-End Ligation 262

Homopolymer Tailing 262

Linker DNA 263

Plasmid Vectors with Polylinkers and Marker Genes for Blue-White Screening 263

9.3 Vectors for Cloning Large DNA Inserts 264

Phage Cloning Vectors 265

Cosmid Vectors, a Combination of λ and Plasmid Vectors 267

Bacterial Artificial Chromosomes (BACs) 268

9.4 Cloning Strategies 268

Shotgun Cloning 270

cDNA Cloning 270

Probe Identification and Synthesis 271

9.5 Expression Vectors 273

9.6 The Polymerase Chain Reaction (PCR) 277

9.7 Gel Electrophoresis 278

Gel Electrophoresis of DNA 278

Gel Electrophoresis of Proteins 282

9.8 DNA, RNA, and Protein Blotting 283

Southern Blotting and Analysis 285

Northern and Western Blotting 285

9.9 DNA Sequencing 287

Sanger Dideoxy Sequencing 287

DNA Sequence Information on the Internet 288

Chapter 10

Eukaryotic Genome Organization 294

10.1 Repetitive and Nonrepetitive DNA 295

Repetitive DNA 296

Transposable Elements 296

Functions of Repetitive and Unique DNA 297

The C-Value Paradox 297

DNA Renaturation Experiments 298

10.2 Eukaryotic DNA Packaging 300

Nucleosomes 301

DNA Packaging and Regulation of Transcription 302

Nucleosomes and DNA Replication 302

10.3 The Eukaryotic Chromosome 303

Structural Features of Eukaryotic Chromosomes 304

Chromatids 305

Centromeres 305

Telomeres 306

Chromosome Banding 306

In Situ Hybridization 308

Euchromatin and Heterochromatin 309

Yeast Artificial Chromosomes (YACs) 310

10.4 Gene Organization in Chromosomes 312

10.5 Whole Genome Organization 314

Chapter 11

Mitosis, Meiosis, and Life Cycles 320

11.1 The Cell Cycle and Mitosis 322

Chromosome Number and Homology 322

The Cell Cycle 323

Mitosis 324

11.2 Meiosis 327

11.3 A Closer Look at Prophase I 330

Stages of Prophase I 330

Crossing-Over 334

11.4 Life Cycles 334

Life Cycle of Animals 336

Life Cycles of Flowering Plants 338

Life Cycles with a Predominant Haploid Phase 338

PART III GENETICS OF ORGANISMS

Chapter 12

Mendelian Genetics 346

12.1 Mendel's Experiments 348

Mendel's Monohybrid Experiments and the Principle of Segregation 348

Mendel's Dihybrid Experiments and the Principle of Independent Assortment 351

12.2 The Molecular Basis of Dominance 353

Basic Genetic Terminology 353

Genotype, Phenotype, and Dominance 354

12.3 The Cellular Basis for Segregation 355

Monohybrid Testcross Experiments 357

Parental Equivalence 358

12.4 The Cellular Basis of Independent Assortment 358

Dihybrid Testcross Experiments 360

Trihybrid Experiments 360

Linked Genes 361

12.5 Mendelian Inheritance in Humans 363

12.6 Mendelian Genetics and Probability 364

The Rules of Probability 365

Binomial Distributions 366

Multinomial Distributions 368

Sampling Error 369

Chi-Square Analysis 369

12.7 About Mendel 371

The Rebirth of Mendelian Genetics 373

Criticisms of Mendel's Work 373

Chapter 13

Variations on Mendel's Theme 380

13.1 Multiple Alleles and Dominance Relations 382

Incomplete Dominance 382

Dominant Mutant Alleles 383

Genetic Notation 384

Codominance 386

Leaky Recessive Alleles 390

Compound Heterozygotes and Dominance Series 391

Lethal Alleles 391

Pleiotropy 393

13.2 Epistasis 393

Complementary Gene Action 395

Duplicate Gene Action 398

Dominant Suppression 398

Dominant Epistasis 399

Recessive Epistasis 400

13.3 Penetrance and Expressivity 400

Penetrance 400

Expressivity 402

Causes of Nonpenetrance and Variable Expressivity 402

13.4 DNA Markers in Genetic Analysis 404

Restriction Fragment Length Polymorphism (RFLP)

Analysis 404

Tandem Nucleotide Repeat Markers 406

PCR-Based Markers 408

Random Amplified Polymorphic DNA (RAPD) 409

Chapter 14

Sex Determination and Sex-Related Inheritance 418

14.1 Promotion of Cross-Fertilization 419

14.2 Sex Determination 421

Environmental Sex Determination 421

Genetic Sex Determination by One Gene 421

Ploidy and Sex Determination 422

Chromosomes and Sex Determination 422

14.3 Heteromorphic Chromosomes and Sex Determination 424

Sex Determination in *Drosophila melanogaster* 424

Sex Determination in Mammals 425

14.4 Sex-Linked Inheritance 427

X- and Y-Linked Inheritance 427

Examples of X-Linked Genetic Disorders in Humans 428

Homology Between X and Y Chromosomes 433

Attached X Chromosomes in *Drosophila melanogaster* 434

Z-Linked Inheritance 435

14.5 Dosage Compensation 436

Dosage Compensation in Mammals 436

Dosage Compensation in *Drosophila* 438

14.6 Sex-Influenced and Sex-Limited Traits 438

Chapter 15

Chromosome Mapping 444

15.1 The Discovery of Linkage and Crossing-Over 446

15.2 Two-Factor Linkage Analysis 447

Two-Factor Linkage in Testcross Progeny 447

Genetic Recombination and Physical Detection of Crossovers 451

Crossing-Over in Duplicated Chromosomes 452

15.3 Map Distance Correction 452

Mapping Function 453

Two-Factor Linkage Analysis in F_2 Progeny 456

15.4 Three-Factor Linkage Analysis 458

Interference 462

Mapping Genes on Heteromorphic Chromosomes 462

15.5 Multifactor Chromosome Mapping 463

15.6 Genetic Mapping in Humans 464

15.7 Physical Chromosome Mapping 465

Deletion Mapping 466

Somatic Cell Hybridization Mapping 466

Physical Chromosome Mapping with In Situ Hybridization 468

Correspondence of Genetic and Physical Maps 468

15.8 Practical Applications of Chromosome Mapping	468
Tracking the Inheritance of an Allele with Coupled DNA Markers	468
Chromosome Walking and Jumping	470
Chapter 16	
Genetic Fine Structure	480
16.1 Tetrad Analysis	481
Spore Formation in <i>Neurospora crassa</i>	481
Centromere Mapping	483
16.2 Unordered Tetrad Analysis	486
16.3 Gene Conversion and the Mechanism of Crossing-Over	489
The Holliday Model of Crossing-Over	490
The Meselson-Radding (Asymmetric Strand-Transfer) Model of Recombination	492
The Double-Strand-Break Repair Model of Recombination	495
Gene Conversion in <i>Drosophila</i>	495
16.4 Intragenic Recombination	496
16.5 Complementation	498
16.6 Fine-Structure Mapping	500
16.7 Mitotic Crossing-Over	504
Chapter 17	
Alterations in Chromosome Number and Structure	512
17.1 Aneuploidy	513
17.2 Polyploidy	517
The Origin of Polyploidy	518
Autopolyploidy and Allopolyploidy	519
Genetics of Polyploidy	523
17.3 Alterations of Chromosome Structure	525
Deletions	525
Duplications	525
Inversions	526
Translocations	528
Chromosome Fission and Fusion	532
Position Effect	533
17.4 Chromosome Alterations in Humans	534
Human Karyotype Nomenclature	535
Reciprocal Translocations and Inversions	536
<i>Cri du chat</i> Syndrome	536
Down Syndrome	536
Edwards Syndrome and Patau Syndrome	539
Aneuploidies for X and Y Chromosomes	539
Parental Imprinting	540
Chromosomal Alterations and Cancer	541
Chapter 18	
Extranuclear Inheritance	548
18.1 The Origins and Cellular Functions of Mitochondria and Plastids	549

Chloroplasmic Structure and Function	551
Mitochondrial Structure and Function	554
Organellar Proteins	557
18.2 Organellar Genomes	558
Mitochondrial Genomes	554
Plastid Genomes	559
18.3 Mitochondrial Inheritance	560
Mitochondrial Inheritance in Yeast	560
Petite Mutants in Yeast	564
Recombination of Mitochondrial Genes	565
Mitochondrial Inheritance in Animals	565
Mitochondrial Inheritance in Plants	566
18.4 Mitochondrial DNA and Genetic Disorders in Humans	568
Disorders Caused by Deletions in the Mitochondrial Genome	568
Point Mutations in Protein-Encoding Genes	568
Point Mutations in tRNA and rRNA Genes	569
Mutations in Mitochondrial DNA and Human Aging	569
18.5 Plastid Inheritance	570
18.6 Other Types of Extranuclear Inheritance	572
18.7 Correctly Recognizing Extranuclear Inheritance	572

PART IV GENETICS OF POPULATIONS

Chapter 19	
Population Genetics	580
19.1 Hardy-Weinberg Equilibrium	581
Hardy-Weinberg Equilibrium for Three Alleles	584
Assumptions for Maintenance of Hardy-Weinberg Equilibrium	585
Establishment of Hardy-Weinberg Equilibrium	585
X-Linked Alleles and Z-Linked Alleles	586
19.2 Genetic Change in Populations	586
19.3 Mutation	587
19.4 Migration	587
19.5 Non-Random Mating	587
Assortative Mating	587
Inbreeding	587
Disassortative Mating	590
19.6 Selection	591
Directional Selection	591
Stabilizing and Disruptive Selection	595
Heterozygote Advantage	596
Balance between Selection and Mutation	597
19.7 Random Genetic Drift	598
Chapter 20	
Quantitative Genetics	606
20.1 Statistical Descriptions of Metric Characters	608
Distributions	608
Sampling	609

Mean, Mode, and Variance	609
Normal Distributions	610
20.2 Additive Gene Action and Continuous Variation	611
20.3 Heterosis and Inbreeding Depression	615
Heterosis	615
Inbreeding Depression	616
20.4 Environmental Variation	617
Causes of Environmental Variation	617
Genotype by Environment Interaction	619
20.5 Broad-Sense Heritability	620
20.6 Narrow-Sense Heritability and Selection	621
The Effect of Dominance on Selection	621
The Effect of Epistasis on Selection	622
The Effect of Environmental Variation on Selection	622
Narrow-Sense Heritability	623
Quantitative Trait Loci and DNA Markers	624
Realized Heritability	625
20.7 Limits on Selection	626
Chapter 21	
Evolutionary Genetics	632
21.1 Speciation	633
Reproductive Isolation	634
Quantum Speciation	639
21.2 Molecular Evolution	641
Amino Acid Sequence Divergence in Proteins	641
Nucleotide Sequence Divergence in DNA	643
Molecular Clocks	644
Large-Scale DNA Sequence Comparisons	646
Molecular-Marker Analysis	646
DNA Hybridization	646
Gene Organization	647
Ancient DNA	647
21.3 Maintenance of Genetic Diversity	648
21.4 Phylogenetic Analysis	649
Construction of a Phylogenetic Tree	649
Comparison of Data from Different Sources in Phylogenetic Analysis	651
PART V GENE EXPRESSION AND THE ORGANISM	
Chapter 22	
Transposable Elements	660
22.1 Eukaryotic Transposons	662
Detection of Transposable Element Activity in Maize	662
The Activator-Dissociator (<i>Ac-Ds</i>) Transposon System in Maize	663
<i>Ds</i> Elements and Chromosome Breakage	668
P Elements in <i>Drosophila</i>	669
Molecular Structure and Function of P Elements	670
22.2 Retrotransposons and Retroposons	672

Retrotransposons	672
Retroposons	672
22.3 Prokaryotic Transposons	674
Insertion Sequences	674
Composite Transposons	675
22.4 Using Transposable Elements in Research	677
Transposon Tagging	677
Transposon-Mediated Transformation	678
Chapter 23	
Developmental Genetics	682
23.1 Differentiation and Totipotency	683
23.2 Genetic Control of Development in <i>Caenorhabditis elegans</i>	684
23.3 Genetic Control of Development in <i>Drosophila melanogaster</i>	686
Maternal Effects in Early Development	688
Segmental Gene Expression	689
Homeotic Gene Expression	691
23.4 Comparison of Mammalian and <i>Drosophila</i> Developmental Genetics	693
23.5 Plant Developmental Genetics	695
23.6 Comparison of Plant and Animal Developmental Genetics	697
Chapter 24	
Genes and Cancer	700
24.1 Genetic Control of the Cell Cycle	702
24.2 The Molecular Basis of Cancer	705
24.3 Examples of Genes That Influence Cancer	706
TP53	706
RB1	707
E2F1	708
RAS	709
APC	709
24.4 The Etiology of Cancer	709
Mutations That Promote Cancer	711
Why Cancer Is So Common?	712
Inherited Susceptibility to Cancer	714
24.5 Cancer Prevention, Detection, and Treatment	714
Cancer Prevention	714
Early Detection	715
Traditional Cancer Treatments	716
Future Treatments	716
Chapter 25	
Genes and Immunity	720
25.1 Immune Responses	722
Humoral Immunity	722
Cell-Mediated Immunity	723
25.2 Antibody Structure	725
25.3 Antibody Genes	725

The IGKC (κ Light-Chain) Gene 726
 The IGLC1 (λ Light-Chain) Gene 727
 The IGHG1 (Heavy-Chain) Gene 727
 Segment Joining During Rearrangement 730
 Productive and Nonproductive Arrangements 730
 Matching Specific Antigens 730

25.4 Cell-Mediated Immunity Genes 731

25.5 Immune System Malfunction 733

Autoimmune Diseases 733
 Immune Deficiencies 734
 Infectious Defeat or Destruction of Immunity 734

25.6 Antibodies as Tools in Genetics Research 735

PART VI APPLICATIONS OF GENETICS

Chapter 26

Genetics in Medicine and Forensics 742

26.1 The Human Genome Initiative 744

Human Chromosome Mapping 744
 Mapping Cloned Fragments into Contigs 744
 Expressed Sequence Tags (ESTs) 745
 Human Genome Sequencing and Data Management 746

26.2 Genetic Testing 746

Biochemical and Cytological Genetic Tests 746
 DNA-Based Genetic Tests 747
 Genetic Testing for Mutant Alleles of the Cystic Fibrosis (CF) Gene 748

26.3 DNA Fingerprinting 749

DNA Fingerprinting in Forensic Science 749
 DNA Fingerprinting in Paternity Testing 750
 Court Challenges of DNA Fingerprinting 751

26.4 Genetic Pharmacology 751

Human Insulin Expression in Bacteria 752
 Foreign Protein Expression in Yeast 754
 Human Proteins Produced in Cultured Mammalian Cells 755

26.5 Human Gene Therapy 755

Viral Vectors in Gene Therapy 756
 Treatment of ADA Deficiency with Gene Therapy 756

26.6 Clinical Genetics 757

Chapter 27

Genetics in Agriculture and Industry 762

27.1 Genetic Diversity 764

Genetic Erosion 765
 Conserving Genetic Resources 768

27.2 Plant Breeding 769

Hybridization 769
 Self-Pollination to Achieve Homozygosity 771
 Late-Generation Testing 772
 F₁ Hybrid Varieties 774
 Asexually Propagated Varieties 772

27.3 Plant Biotechnology 774

Plant Cell and Tissue Culture 774
 Somaclonal Variation 774
 Plant Transformation 775
 Marker-Assisted Selection 777

27.4 Animal Breeding and Biotechnology 778

Animal Breeding Methods 778
 Animal Biotechnology 779
 Animal Cloning 780
 Transgenic Animals 781

27.5 Applications of Genetics in Industry 781

Land Reclamation 781
 Genetically Modified Bacteria for Hazardous-Waste Cleanup 781
 Biosynthesis of Fuels and Industrial Products 782

Chapter 28

Legal and Ethical Issues in Genetics 786

28.1 Eugenics 788

The Effect of Eugenic Selection 789
 Contemporary Selection in Humans 790

28.2 Genetic Testing and Screening 790

Occupational Genetic Testing 791
 Genetic Testing and Health Insurance 791
 Legal Challenges of DNA Testing 792
 Informed Consent and Confidentiality 793

28.3 Legal Protection and Intellectual Property Rights in Genetics 794

Patenting Microbes 794
 Patenting Genes 794
 Patenting Traits 794
 Patenting Techniques 794
 Plant Genetic Protection Rights 794
 Animal Genetic Protection Rights 795
 Implications of Protecting Genetic Materials, Traits, and Techniques 796

28.4 Recombinant DNA and Safety 797

28.5 Genetics and Science Education 797

Solutions to Selected Problems 801

Glossary 809

Index 821
