

BRIEF CONTENTS

Preface xiii

PART I FUNDAMENTALS

Chapter 1 Introduction to the Nervous System 3

Chapter 2 How Neurons Communicate 40

Chapter 3 Methods 61

Chapter 4 Hemispheric Specialization 112

PART II NEURAL BASES OF MENTAL FUNCTIONS

Chapter 5 Motor Control 145

Chapter 6 Object Recognition 184

Chapter 7 Spatial Processing 221

Chapter 8 Attention 252

Chapter 9 Language 285

Chapter 10 Memory 322 Contributed by Neal J. Cohen and Marie T. Banich

Chapter 11 Executive Function 365

Chapter 12 Emotion 393 Contributed by Wendy Heller

PART III BROAD-BASED PHENOMENA

Chapter 13 Plasticity Across the Life Span 431

Chapter 14 Generalized Cognitive Disorders 477

Glossary 519

References 537

Credits 604

Subject Index 622

CONTENTS

Preface xiii

PART I FUNDAMENTALS

CHAPTER 1 Introduction to the Nervous System 3

What Are Cognitive Neuroscience and Neuropsychology? 4

Basic Building Blocks of the Nervous System 5

Neuroanatomical Terms and Brain "Geography" 6

Major Subdivisions of the Central Nervous System 9

Spinal Cord 10

Medulla 10

Cerebellum 14

Pons 14

Midbrain 14

Hypothalamus 15

Thalamus 15

Major Subcortical Systems 16

Cerebral Cortex 17

A Closer Look at the Cerebral Cortex 18

Cytoarchitectonic Divisions 19

Primary Sensory and Motor Cortices 19

Discovery of the "Homunculus" 24

Association Areas 31

Summary 38

Key Terms 39

CHAPTER 2 How Neurons Communicate 40

Introduction 41

Electrochemical Signaling in the Nervous System 41

How Information Is Transferred within a Neuron 41

How Information Is Transferred between Neurons 43

How Postsynaptic Potentials Can Cause an Action Potential 43

Factors That Influence the Responsiveness of a Neuron 45

Neurotransmitters 46

Amino Acids 47

Neurotransmitter Systems 48

Interaction between Neurotransmitter Systems 55

So Can Herbs Really Improve Your Attention, Memory, and Mood? 56

Chemical Modulation of Neural Transmission 57

Myelination 58

Summary	60
Key Terms	60

CHAPTER 3 Methods 61

Introduction	62
Populations of Research Participants	63
Patients with Circumscribed Brain Damage	63
Neurologically Intact Individuals	70
Nonhuman Animals	71
Techniques for Assessing Brain Anatomy	72
Computerized Axial Tomography	73
Magnetic Resonance Imaging	77
Techniques for Assessing Physiological Function	79
Functional Brain Imaging Methods	79
Participating in a Functional Magnetic Resonance Imaging Study	84
Electromagnetic Recording Methods	84
Optical Recording Methods	95
Techniques for Modulating Brain Activity	96
Techniques for Analyzing Behavior	99
The Role of Cognitive Theories	99
Clinical Assessment of Behavior	101
Techniques for Modeling Brain-Behavior Relationships	106
Summary	110
Key Terms	111

CHAPTER 4 Hemispheric Specialization 112

Basics of Hemispheric Specialization	113
Historical Perspective	115
Studies of Patients with Split-Brain Syndrome	116
Research with Individuals with Lateralized Lesions	119
Research with Neurologically Intact Individuals	120
Characterization of Hemisphere Differences	124
Differences in Sensitivity to Particular Sensory Features	124
Differences in Modes of Processing	126
Integration of Information between the Hemispheres	128
Nature of Information Carried Over the Corpus Callosum	129
Functions of Interhemispheric Interaction	130
Developmental Aspects of Hemispheric Specialization	133
Individual Differences in Brain Organization	135
Handedness	135
Is Being Left-Handed a Health Hazard?	136
Gender	138
Why Have a Lateralized Brain?	140
Summary	141
Key Terms	142

PART II NEURAL BASES OF MENTAL FUNCTIONS**CHAPTER 5 Motor Control 145**

Introduction 146

Brain Structures Involved in Motor Control 147

Subcortical Regions 147

Cortical Regions 160

Motor Disorders 170

Subcortical Motor Disorders 170

The Wexler Family's Role in Finding the Genetic Basis of Huntington's Disease 174

Cortical Motor Disorders 177

Summary 182

Key Terms 183

CHAPTER 6 Object Recognition 184

The "What" Ventral Visual System 186

Evidence from Nonhuman Primates 186

Evidence from Humans 189

Computational Models of Object Recognition 192

Visual Agnosia 194

Apperceptive Agnosia 195

Associative Agnosia 197

Differences between Apperceptive Agnosia and Associative Agnosia 198

Visual Imagery: Seeing Objects with the Mind's Eye 200

Face-Recognition Difficulties as a Special Type of Visual Agnosia 199

Face Recognition in Other Species 200

Face Recognition in Humans 203

Role of Experience or Expertise in Face-Processing Capacities 208

Implicit Recognition of Faces 211

Category-Specific Deficits in Object Recognition 212

Agnosias in Other Modalities 215

Auditory Agnosia 215

Somatosensory Agnosia 217

Summary 218

Key Terms 220

CHAPTER 7 Spatial Processing 221

The "Where" Dorsal Visual System for Spatial Processing 223

Basic Spatial Processes in Humans 226

Localization of Points in Space 226

Depth Perception 228

Orientation of Lines 229

Geometric Relations 230

Motion 230

Rotation	232
Constructional Abilities	232
Route-Finding and Topographical Skills	234
Body Schema	238
Spatial Memory	239
Short-Term Spatial Memory	239
Long-Term Spatial Memory	241
Topographical Memory	242
Attentional Disturbances in Spatial Processing	243
Balint's Syndrome	244
Hemineglect	245
Role of the Left Hemisphere in Spatial Processing	245
<i>How the Neuropsychology of Spatial Abilities Influences Aviation</i>	246
Summary	250
Key Terms	251

CHAPTER 8 Attention 252

What Is "Attention"?	253
Brain Structures Involved in Attention	254
Reticular Activating System	255
Superior Colliculus	256
Thalamus	258
Parietal Lobe	259
Anterior Cingulate Cortex	261
Frontal Lobe	262
The Time Course of Selective Attention	262
Selection by Spatial Location, Objects, and Features	263
Models of Attentional Control by a Cortical Network	265
Component Processes by Discrete Brain Areas	265
Distributed Network Models	266
Computationally Influenced Models	267
Hemineglect: Clinical Aspects	268
Clinical Features	268
Theories Regarding the Underlying Deficit	272
Treatment	274
Hemineglect: Implications for Understanding Brain-Behavior Relationships	275
Multiple Spatial Frames of Reference	275
Space-Based vs. Object-Based Attention	277
<i>Neuropsychological Bases of Consciousness</i>	278
Hemispheric Differences in Attentional Control	279
Processing of Unattended Stimuli	281
Summary	283
Key Terms	284

CHAPTER 9 Language 285

Neurological Bases for Auditory Language Processing	287
Evidence from Studies of Patients with Brain Damage	287
Converging Evidence from Other Research Methods	298

Neurological Bases for Visual Language Processing	301
Evidence from Studies of Patients with Brain Damage	303
Converging Evidence from Other Research Methods	307
Processing of Non-Indo-European Languages and Other Symbolic Systems	309
Kana and Kanji	309
American Sign Language	310
Music	313
Language and the Right Hemisphere	314
Right-Hemisphere Contributions to Language Processing	314
<i>Brain Organization in Bilinguals</i>	316
Why Isn't the Right Hemisphere Specialized for Language?	319
Summary	320
Key Terms	321

CHAPTER 10 Memory 322

Contributed by Neal J. Cohen and Marie T. Banich

What Is Memory?	324
Amnesia—A Disorder of Long-Term Memory	325
Etiologies	325
Temporal Extent	327
Global Nature of the Deficit	330
Spared Working Memory	331
<i>A Unique Opportunity to Examine the Nature of Temporally Graded Retrograde Amnesia</i>	332
Spared Skill Learning	332
Explanations of the Deficit	335
Amnesia in Nonhuman Animals	338
Working Memory	342
Evidence from Patients	342
Converging Evidence	344
Skill Learning	347
Multiple Memory Systems	348
The Declarative/Procedural Distinction	348
Implications for Memory Storage	350
Relationship between Memory Systems	355
Brain Regions That Support Encoding, Consolidation, and Retrieval	356
Hippocampus	356
Frontal Regions	357
Left Parietal Cortex	359
The Amygdala: An Interface between Memory and Emotion	359
Memory and Consciousness	361
Summary	363
Key Terms	364

CHAPTER 11 Executive Function 365

Executive Function and Goal-Directed Behavior	367
Initiation, Cessation, and Control of Action	367
Abstract and Conceptual Thinking	371

Cognitive Estimation and Prediction	371
Cognitive Flexibility and Response to Novelty	373
Goal-Directed Behaviors	375
Theories of Frontal Lobe Function in Executive Control	385
Frontal Lobotomy as a "Cure" for Schizophrenia	386
Role of Working Memory	387
Role of Controlled versus Automatic Processes	388
Use of Scripts	389
Guidance of Behavior Toward a Goal	390
An Integration	390
Summary	391
Key Terms	392

CHAPTER 12 Emotion 393

Contributed by Wendy Heller

What Is Emotion?	395
Subcortical Brain Regions Involved in Emotion	397
Amygdala: Fear and Emotional Learning	398
Hippocampus: Putting Emotion in Context	401
Hypothalamus: Get Ready to Run	402
Cingulate Cortex: Interfacing Emotion and Cognition	402
Cortical Regions Involved in Emotion	404
Prefrontal Cortex	404
Insula: Wrinkle Your Nose	408
Parietal Lobes	408
Models of Neural Organization of Emotion	415
Overview of Models of Emotion Processing	415
Approach/Withdrawal Model	416
Valence/Arousal Model	417
Individual Differences in Affective Style	418
Neural Bases of Mood and Emotional Disorders in Psychopathology	419
Depression	419
Anxiety disorders	421
Causes of Gender Differences in Depression: Biology, Environment, or Both?	422
Schizophrenia	424
Summary	427
Key Terms	428

PART III BROAD-BASED PHENOMENA

CHAPTER 13 Plasticity Across the Life Span 431

Developmental Cognitive Neuroscience and Neuropsychology	433
Changes in the Brain During Development	433
Influence of the Environment on Developing Brain	441
Developmental Disorders	443

Learning Disabilities	443
Autism and Pervasive Developmental Disorders	444
Attention-Deficit Hyperactivity Disorder	449
Mental Retardation	450
Adult Outcomes of Developmental Disorders	456
Recovery of Function	457
Neurophysiological Responses to Insult	457
Mechanisms for Recovery of Function	458
Factors Influencing Recovery of Function in Adults	462
Recovery of Function in Children	464
Programs of Rehabilitation	467
Can Deprivation Lead the Brain to Reorganize in a Way That Produces Extraordinary Abilities?	468
Changes in the Brain with Aging	470
Theories of Cognitive Changes with Aging	470
Brain Regions Most Susceptible to Effects of Aging	471
Global Changes in Patterns of Brain Activation with Aging	472
Slowing the Effects of Aging	473
Summary	475
Key Terms	476

CHAPTER 14 Generalized Cognitive Disorders 477

Closed Head Injury	479
Etiology and Neuropsychological Consequences	479
Closed Head Injury and Sports	483
Dementing Diseases	485
Cortical Dementias	486
Subcortical Dementias	497
Mixed-Variety Dementias	501
Demyelinating Diseases	504
Brain Syndromes Resulting from Substance Abuse and Exposure to Toxins	506
Substance Abuse	506
Toxins	509
How to Detect Malingering	510
Epilepsy	512
Summary	516
Key Terms	517
Glossary	519
References	537
Credits	604
Name Index	608
Subject Index	622
