Preface, vii

1 Genetic Recombination, 1

- 1.1 Introduction, 1
- 1.2 Homologous, site-specific, transpositional and illegitimate recombination, 3
- 1.3 Joining and copying, 4
- 1.4 The soma and the germ-line, 7
- 1.5 Meiosis, 8
- 1.6 Recombination and biology, 11
- 1.7 Recombination and genetics, 13
- 1.8 Conclusion, 13

2 Homologous Recombination, 15

- 2.1 Introduction, 15
- 2.2 Recombination can involve chromosome breakage, 21
- 2.3 Recombination joints contain heteroduplex DNA, 24
- 2.4 Crosses and recombinant frequencies, 26
- 2.5 Interference, 27
- 2.6 Several recombination systems can co-exist within the same cell, 31
- 2.7 The homologous recombination genes of *Escherichia coli*, 32
- 2.8 The RecA protein, 33
- 2.9 *Cbi* sites and the RecBCD enzyme, 37
- 2.10 Enzymes that catalyse branch-migration and the resolution of Holliday junctions, 44
- 2.11 Double-strand breaks can act as recombinators, 45 •
- 2.12 Reciprocity of phage recombination, 45
- 2.13 Reciprocity of recombination in fungi, 50
- 2.14 Polarity in fungal recombination, 53
- 2.15 Double-strand break repair, 55
- 2.16 Conclusion, 59

3 The Roles of Homologous Recombination, 63

- 3.1 Introduction, 63
- 3.2 Genetic mixing, 63
- 3.3 Chromosome segregation, 67
- 3.4 DNA repair, 68
- 3.5 Mating-type interconversion, 68
- 3.6 Antigenic variation, 71
- 3.7 Intron homing and intron loss, 75
- 3.8 DNA replication and packaging, 78
- 3.9 Conclusion, 80

4 Site-Specific Recombination, 83

- 4.1 Introduction, 83
- 4.2 DNA conformation and topology, 83
- 4.3 Tn3 co-integrate resolution, 87

- 4.4 Bacteriophage λ integration and excision, 95
- 4.5 Bacteriophage host-range variation, 101
- 4.6 Antigenic variation, 105
- 4.7 DNA replication, 105
- 4.8 Chromosome monomerization, 106
- 4.9 Mobile gene-cassettes and integrons, 108
- 4.10 Conclusion, 108

5 Transposition, 112

- 5.1 Introduction, 112
- 5.2 Classification and structure of prokaryotic transposable elements, 113
- 5.3 Classification and structure of eukaryotic transposable elements, 115
- 5.4 Target-site duplication, 117
- 5.5 Conservative and replicative transposition, 119
- 5.6 Strand-transfer in transposition, 125
- 5.7 Recognition of the active orientation of transposon ends, 126
- 5.8 Transposition via an RNA intermediate, 126
- 5.9 Transposition can mediate genetic rearrangement, 133
- 5.10 Conclusion, 137

6 Illegitimate Recombination, 140

- 6.1 Introduction, 140
- 6.2 End-joining, 141
- 6.3 Strand-slippage, 144
- 6.4 Secondary structures promoting illegitimate recombination, 146
- 6.5 Immunoglobulin VDJ joining, 150
- 6.6 Immunoglobulin class-switching, 154
- 6.7 Aberrant topoisomerase, replication and recombination reactions, 154
- 6.8 Illegitimate recombination and cancer, 156
- 6.9 Cloning and targeting problems associated with illegitimate recombination, 156
- 6.10 Conclusion, 157

7 Applications of Genetic Recombination, 159

- 7.1 Introduction, 159
- 7.2 Mapping in eukaryotes, 160
- 7.3 Linkage analysis in humans, 166
- 7.4 Mapping in bacteria, 170
- 7.5 Transposon mutagenesis and transposable vectors, 172
- 7.6 Gene-targeting, 176
- 7.7 Gene-therapy, 182
- 7.8 Conclusion, 186

Index, 189
