

Contents

Introduction	1
--------------	---

PART I

The Birth of Molecular Biology

1. The Roots of the New Science	11
2. The One Gene–One Enzyme Hypothesis	21
3. The Chemical Nature of the Gene	30
4. The “Phage Group”	40
5. The Birth of Bacterial Genetics	51
6. The Crystallization of the Tobacco Mosaic Virus	62
7. The Role of the Physicists	67
8. The Influence of the Rockefeller Foundation	79
9. A New World View	88
10. The Role of Physics	99

PART II

The Development of Molecular Biology

11. The Discovery of the Double Helix	105
12. Deciphering the Genetic Code	120

- 13. The Discovery of Messenger RNA 139
- 14. The French School 150

PART III

The Expansion of Molecular Biology

- 15. Normal Science 167
- 16. Genetic Engineering 184
- 17. Split Genes and Splicing 204
- 18. A New Molecular Biology 215
- 19. The Discovery of Oncogenes 219
- 20. From DNA Polymerase to the Amplification of DNA 231
- 21. Molecular Biology in the Life Sciences 243

Appendix: Definition of Terms 255

Notes 259
