
Contents

Preface	ix
1 Introduction	1
PART ONE Electrical Properties of Cells and Homeostasis	
2 Electrical Properties of Neurons	31
3 Ion Permeability and Membrane Potentials	70
4 Ion Pumps and Homeostasis	107
PART TWO Active Propagation of Neural Signals	
5 Action Potentials: The Hodgkin-Huxley Experiments	145
6 The Structure and Function of Voltage-Gated Na^+ and K^+ Channels	192
7 The Diversity of Ion Channels	231
PART THREE Synaptic Transmission and Ligand-Gated Channels	
8 Presynaptic Mechanisms of Synaptic Transmission (revised by Thomas J. O'Dell)	281
9 Excitatory Transmission	328
10 Inhibitory Transmission (revised by Thomas J. O'Dell)	385
PART FOUR Metabotropic Transmission and Neuromodulation	
11 Metabotropic Transmission: Receptors and G Proteins	417
12 Metabotropic Transmission: Effector Molecules	441

13	Metabotropic Transmission: Calcium	476
14	Long-Term Potentiation (originally written and newly revised by Thomas J. O'Dell)	509
PART FIVE Sensory Transduction		
15	Mechanoreceptors	545
16	Photoreceptors and Olfactory Receptor Neurons	583
	Appendix: Symbols Used	629
	References	633
	Index	723

Note: Color illustrations follow page 402
