PREFACE	xi
INTRODUCTION: GENETICS AND CONSERVATION BIOLOGY <i>Andrew P. Dobson</i>	xiii
CHAPTER ONE: Extinction Risks from Anthropogenic, Ecological, and Genetic Factors <i>Russell Lande</i>	1
CHAPTER TWO: Genes, Demes, and Plant Conservation <i>K. E. Holsinger, R. J. Mason-Gamer, and J. Whitton</i>	23
CHAPTER THREE: Genetic Theory and Evidence Supporting Current Practices in Captive Breeding for Conservation <i>Kathryn M. Rodríguez-Clark</i>	47
CHAPTER FOUR: Two Problems with the Measurement of Genetic Diversity and Genetic Distance <i>William Amos</i>	75
CHAPTER FIVE: One Use of Phylogenies for Conservation Biologists: Inferring Population History from Gene Sequences <i>Paul H. Harvey and Helen Steers</i>	101
CHAPTER SIX: Parasites and Conservation of Hawaiian Birds <i>Rebecca L. Cann and Leslie J. Douglas</i>	121
CHAPTER SEVEN: Extinction and Endangerment of Hawaiian Honeycreepers: A Comparative Approach <i>Leonard A. Freed</i>	137
CHAPTER EIGHT: Something Old for Something New: The Future of Ancient DNA in Conservation Biology <i>Laura F. Landweber</i>	163
