List of Figures and Tables	xi
Acknowledgments	xv
1. Complexity in Ecological Systems	1
<i>The Newtonian Paradigm in Physics</i>	2
<i>Dynamics and Thermodynamics</i>	6
<i>Emergent Properties</i>	10
<i>Ecosystems as Complex Adaptive Systems</i>	13
2. Nonlinear Dynamics	17
<i>The Balance of Nature?</i>	17
<i>Population Cycles</i>	19
<i>Catastrophes and Breakpoints</i>	27
<i>Deterministic Chaos</i>	31
<i>Evidence of Bifurcations in Nature</i>	34
<i>Unpredictability and Forecasting</i>	42
<i>The Ecology of Universality</i>	48
<i>Evidence of Chaos in Nature</i>	50
<i>Criticisms of Chaos</i>	58
<i>Complex Dynamics: The Interplay between Noise and Nonlinearities</i>	61
3. Spatial Self-Organization: From Pattern to Process	65
<i>Space: The Missing Ingredient</i>	65
<i>Turing Instabilities</i>	68
<i>Coupled Map Lattice Models</i>	84
<i>Looking for Self-Organizing Spatial Patterns in Nature</i>	95
<i>Dispersal and Complex Dynamics</i>	98
<i>Spatial Synchrony in Population Cycles</i>	108
<i>When Is Space Relevant? A Trade-Off between</i>	
<i>Simplicity and Realism</i>	117
<i>Coevolution and Diffusion in Phenotype Space</i>	123
4. Scaling and Fractals in Ecology	127
<i>Scaling and Fractals</i>	127
<i>Fractal Time Series</i>	137
<i>Percolation</i>	139
<i>Nonequilibrium Phase Transitions</i>	144

CONTENTS

<i>The Branching Process</i>	146
<i>The Contact Process: Complexity Made Simple</i>	149
<i>Random Walks and Levy Flights in Population Dynamics</i>	151
<i>Percolation and Scaling in Random Graphs</i>	156
<i>Ecological Multifractals</i>	162
<i>Self-Organized Critical Phenomena</i>	165
<i>Complexity from Simplicity</i>	168
5. Habitat Loss and Extinction Thresholds	171
<i>Habitat Loss and Fragmentation</i>	171
<i>Extinction Thresholds in Metapopulation Models</i>	173
<i>Extinction Thresholds in Metacommunity Models</i>	178
<i>Food Web Structure and Habitat Loss</i>	186
<i>Percolation in Spatially Explicit Landscapes</i>	191
<i>Extinction Thresholds in Spatially Explicit Models</i>	195
<i>Analytical Models of Correlated Landscapes</i>	199
<i>More Realistic Models of Extinction Thresholds</i>	206
6. Complex Ecosystems: From Species to Networks	215
<i>Stability and Complexity</i>	215
<i>N-Species Lotka-Volterra Models</i>	218
<i>Topological and Dynamic Constraints</i>	223
<i>Indirect Effects</i>	226
<i>Keystone Species and Evolutionary Dynamics</i>	231
<i>Complexity and Fragility in Food Webs</i>	237
<i>Community Assembly: The Importance of History</i>	251
<i>Scaling in Ecosystems: A Stochastic Quasi-Neutral Model</i>	254
7. Complexity in Macroevolution	263
<i>Extinction and Diversification</i>	263
<i>Internal and External Factors</i>	264
<i>Scaling in the Fossil Record</i>	270
<i>Competition and the Fossil Record</i>	276
<i>Red Queen Dynamics</i>	279
<i>Evolution on Fitness Landscapes</i>	282
<i>Extinctions and Coherent Noise</i>	292
<i>Network Models of Macroevolution</i>	295
<i>Ecology as It Would Be: Artificial Life</i>	304
<i>Recovery after Mass Extinction</i>	308
<i>Implications for Current Ecologies</i>	313

CONTENTS

Appendix 1. Lyapunov Exponents for ID Maps	317
Appendix 2. Renormalization Group Analysis	319
Appendix 3. Stochastic Multispecies Model	321
References	325
Index	359

1.1	Dynamics of the population	1
1.2	Levels of organization and the hierarchy of systems	2
1.3	Flow in an open system	3
1.4	Order and chaos in the logistic map	4
1.5	Long range order and correlation spectra	5
2.1	Types of attractors	12
2.2	Population dynamics of the logistic map	21
2.3	Attractors in Lorenz systems	23
2.4	Population cycles in a predator-prey model	25
2.5	Population cycles in a predator-prey model	26
2.6	Breakpoints and chaos theory	27
2.7	Chaos in the logistic map	28
2.8	Bifurcation in the logistic map	29
2.9	Bifurcation diagrams in the logistic map	30
2.10	Bifurcation and chaos in the logistic map	31
2.11	Strange attractor in the logistic map	32
2.12	Strange attractor	33
2.13	Dependence on initial conditions	34
2.14	Lyapunov exponents	35
2.15	Attractor vs. nonattractor	36
2.16	Nonlinear increasing	37
2.17	Dependence of the Lyapunov exponent	38
2.18	Simulated stochasticity	39
2.19	Nonlinear bifurcation diagram	40
3.1	Symmetry breaking in the logistic map	41
3.2	Dispersed in the logistic map	42
3.3	Pattern formation	43
3.4	Pattern formation in the logistic map	44
3.5	Pattern formation in the logistic map	45
3.6	Spatial pattern in the logistic map	46
3.7	Distribution as a function of time	47
