Acknowledgments	xi
1. Sex Allocation	1
1.1 What Is Sex Allocation?	1
1.2 A Potted History	2
1.3 Why Is This Book Needed?	8
1.4 What Is in This Book	8
1.5 What Is Not in This Book	10
1.6 How To Read This Book	11
1.7 Language and Sex Ratios	12
2. The Düsing-Fisher Theory of Equal Investment	14
2.1 Introduction	14
2.2 Fisher's Theory of Equal Investment	15
2.3 Darwin to Today	16
2.4 Differential Mortality	19
2.5 Testing Fisher's Theory	20
2.6 Conclusions and Future Directions	31
3. Interactions between Relatives I: Cooperation and Competition	33
3.1 Introduction	33
3.2 Basic Theory	34
3.3 Local Resource Enhancement	40
3.4 Local Resource Competition	53
3.5 Conclusions and Future Directions	69
4. Interactions between Relatives II: Local Mate Competition	73
4.1 Introduction	73
4.2 Classic Local Mate Competition Theory	74
4.3 Empirical Tests of Local Mate Competition Theory across Populations or Species	83
4.4 Facultative Adjustment of Offspring Sex Ratios by Individuals	93
4.5 Conclusions and Future Directions	107

5. Interactions between Relatives III: Extended Local Mate	
Competition Theory	109
5.1 Introduction	109
5.2 Partial LMC	110
5.3 Variable Clutch Size	116
5.4 Sibmating and Split Sex Ratios in Haplodiploids	131
5.5 Inbreeding Depression	134
5.6 Limited Dispersal and Relatedness between	
Foundress Females	136
5.7 Haystacks	140
5.8 Asymmetrical Larval Competition	143
5.9 Fertility Insurance	143
5.10 Variance and Precision	151
5.11 Other Population Structures	154
5.12 Stochasticity	155
5.13 Conclusions and Future Directions	156
6. Conditional Sex Allocation I: Basic Scenarios	162
6.1 Introduction	162
6.2 Theory	165
6.3 Solitary Parasitoid Wasps and Host Size	167
6.4 Maternal Quality in Ungulates	174
6.5 Maternal Quality and Related Factors in Nonungulates	182
6.6 Mate Attractiveness in Birds and Lizards	187
6.7 Environmental Sex Determination	191
6.8 Sex Change	198
6.9 Conclusions and Future Directions	205
7. Conditional Sex Allocation II: Population Consequences and	
Further Complications	210
7.1 Introduction	210
7.2 Population-Level Patterns	211
7.3 Sex Change Complications	225
7.4 ESD Complications, Especially in Reptiles	243
7.5 Multiple Selective Forces: LMC and Host Size	
in Parasitoid Wasps	251
7.6 Simultaneous Hermaphrodites	254
7.7 Conclusions and Future Directions	255
8. Sex Allocation When Generations Overlap	257
8.1 Introduction	257
8.2 Exceptional Mortality	258

8.3 Exceptional Recruitment	263
8.4 Cyclical Models	265
8.5 Conclusions and Future Directions	273
9. Conflict I: Between Individuals	276
9.1 Introduction	276
9.2 Conflict under Fisherian Selection	277
9.3 Conflict under LMC, LRC, and LRE	278
9.4 Sibling Conflict in Haplodiploids and Single-Sex Broods	281
9.5 Polyembryonic Parasitoids	282
9.6 Sex Allocation Conflicts in the Eusocial Hymenoptera	287
9.7 Conclusions and Future Directions	311
10. Conflict II: Sex Allocation Distorters	316
10.1 Introduction	316
10.2 Classification of Sex Ratio Distorters	317
10.3 Case Studies	329
10.4 Consequences of Sex Ratio Distorters	344
10.5 Conclusions and Future Directions	351
11. General Issues	353
11.1 Introduction	353
11.2 The Success of Sex Allocation	354
11.3 The Use of Sex Allocation	355
11.4 Outstanding Problems	375
References	379
